MICROPROCESSOR–System Components (Cont'd)

Peripheral Controllers (Cont'd)

Function	Device	Source	Line
CRT (RGB video DAC) (Cont'd)			
	HDAC34010	**HoneywellSPT (3680)**	
	HDAC34020	**HoneywellSPT (3681)**	
CRT (RGB video DAC and 16x12 RAM)	BT450	Brooktree	
CRT (RGB video DAC and 256x2 RAM)	BT451	Brooktree	
CRT (RGB video DAC and 256x24 RAM)	BT453	Brooktree	5
	BT458	Brooktree	
CRT, Sequencer (IBM compatible)	**82C432**	**Chips&Tech (1605)**	
CRT Terminal Controller	NS455	National	
CRT Text Coprocessor	82730	Intel	
CRT, TV-CRT Processor; Performs Text Refresh, Character Writing and Cursor Management on TV Screen; 1.6 MHz Clock Rate (typ.)	SFF96364	ThomsonCSF	10
CRT, TV-CRT Processor; 96364 with External Sync	SFF96366	ThomsonCSF	
CRT, Video Attributes Controller	**MC2673**	**Motorola (1662)**	
	SCB2673A	**Signetics (1702)**	
	SCB2673B	**Signetics (1702)**	
	SCB2677A	**Signetics (1708)**	15
	SCB2677B	**Signetics (1708)**	
	CRT9041A	SMC	
	CRT9041B	SMC	
	CRT9041C	SMC	
	UM8321	UMC	20
CRT Video Attributes Controller (graphic logic, attributes logic, data and attributes latches, cusor control and shift register)	CRT9021B	SMC	
CRT Video Attributes Controller/Video Generator (video shift register, horizontal and vertical retrace blanking, graphics generation, attributes buffer)	CRT8021	SMC	
	CRT8021-003	SMC	
CRT, Video Character Generator	HS3819	Harris	
CRT, Video Data Serializer	AM8177	AMD	25
CRT, Video Diaplsy Processor	TMS9118	TI	
	TMS9128	TI	
	TMS9129	TI	
CRT, Video Display Generator, Reads Data from Memory to Produce Composite Video Signal, Internal Display Memory Mux	**MC6847**	**Motorola (1661)**	
CRT Video Display-Controller Video Generator	SND8002	SSS	30
	CRT8002	SMC	
CRT, Video Interface Controller	82731	Intel	
CRT, Video Palette (color lookup table and video DAC)	TMS34070	TI	
CRT, Video Processor and Controller	CRT9007A	SMC	
	CRT9007B	SMC	35
	CRT9007C	SMC	
CRT, Video RGB DAC	RGBDAC4T	Intech	
	RGBDAC8E	Intech	
	RGBDAC8T	Intech	
	VDAC444	Intech	40
CRT, Video Shift Register	AM8157	AMD	
CRT, Video System Controller	TMS34061	TI	
CRT, Video System Controller (See 8052 CRT Controller)	AM8152AC	AMD	
	AM8152AM	† AMD	
CRT, Video Terminal Logic Controller	CRT9028	SMC	45
	CRT9053	SMC	
	CRT9128	SMC	
	CRT9153	SMC	
CRT Video Timer-Controller	SND5027	SSS	
	SND5037	SSS	50
	CRT5027	SMC	
CRT Video Timer-Controller, Line Lock Feature	CRT5057	SMC	
CRT Video Timer-Controller, Preprogrammed	CRT5047	SMC	
CRT Video Timer-Controller, ROM Programmed	CRT5037	SMC	
CRT, Video Timing Controller	AM8158C	AMD	55
CRT, Video Timing Controller, Programmable	**MC2672**	**Motorola (1662)**	
CRT, 3 Gun Color Palette	AM8159	AMD	
Data Bit Processor	**CT1555**	**† CTI (601)**	
	CT1608	**† CTI (601)**	
Devices in this category are intended for use with any microprocessor			60
Direct Memory Access Controller	μPD71071	NEC	
Disk Buffer Management Unit	HDC9225	SMC	
Disk Drive VFO	HA16632A	Hitachi	
Disk, Hard Disk Controller	HD63463	Hitachi	
	μPD7261AH	NEC	65
Display Character and Graphics Generator	**MC2670**	**Motorola (1662)**	
	SCN2670A	Signetics	
	SCN2670B	Signetics	
Display Controller (Dot), LED and Keyboard Interface	MTX-A1	Matrox	
Display Controller (Segment), Keyboard Interface	MTX-B1	Matrox	70
Display Controller, 4-Character Alphanumeric	MM74C956	National	
Display Controller, 14 to 18 Segment Vacuum Flourescent Displays (16 characters)	10937	Rockwell	
Display, LCD/Console Controller for Alphanumeric 5x7 Dot Matrix Display	CY300	Cybernetic	
DMA, Direct Memory Access Controller	AM9517A	AMD	
DMA Direct Memory Access Controller	AM9517A-1	AMD	75
	AM9517A-4	AMD	
DMA, Programmable DMA Controller	8237	Intel	
	8257	Intel	
	μPD71057	NEC	
	VL8237A	VTI	80
DMA Transfer Controller	Z8516	Zilog	
DMA, Dual Direct Memory Access Controller	SCN68440	Signetics	
	EF68440	ThomsonCSF	
Dot Matrix LCD Controller/Driver, Intelligent	μPD7227	NEC	
	μPD7228	NEC	85
Double Row Buffer (RAM-based buffer that appears to the system as two octal shift registers of dynamically variable length)	CRT9212	SMC	
Driver/Receiver for Disk Head Amplifier	MB4316	Fujitsu	
Enhanced Programmable Communications Interface	**IM26C61**	**Intersil (1645)**	
Enhanced Programmable Communications Interface (EPCI)	**SCN68661B**	**Signetics (1690)**	
	SCN68661C	**Signetics (1690)**	90
	SCN8661A	Signetics	
Enhanced Programmable Communications Interface with On-Board Crystal Oscillator	**IM26C62**	**Intersil (1645)**	
Enhanced Sound Generator	AY8930	GI	
	AY8931	GI	
Ethernet Data Link Controller	AM7990	AMD	95
	MB8795A	**Fujitsu (1611)**	
	8003	SEEQ	
Ethernet, Local Area Network Controller (LANCE)	AM7990	AMD	
	MK68590	**Mostek (3611)**	
	MC68590	**Motorola (1657)**	100
Ethernet, Manchester Code Converter	8023A	SEEQ	
Ethernet, Serial Interface Adapter (Ethernet Controller Interface)	MK68591	Mostek	
Ethernet Serial Interface Adapter (SIA)	AM7991A	AMD	
Ethernet, Serial Interface Adaptor, 802.3 compatible	AM7992A	AMD	
Ethernet Transceiver	AM7995	AMD	105
Floppy Disc Controller/Formatter (single and double density)	**MB89311**	**Fujitsu (1611)**	
	VL1770	**VTI (1751,1752,1766)**	
	WD1770	Western	
Floppy Disc Controller/Transmitter (IBM 3740 compatible)	**MB8876A**	**Fujitsu (1611)**	
	MB8877A	**Fujitsu (1611)**	110
Floppy Disc Read Amplifier System	CS3470A	Cherry	
Floppy Disc Write Control	CS3471	Cherry	
Floppy Disk Controller	HA16643	Hitachi	
	MSM6291	**OKI (4733)**	
Floppy Disk Controller, Data Separator	**MSM6281**	**OKI (4733)**	115
Floppy Disk Controller, Double Density (DDFDC)	R68465	Rockwell

μ Processor

THE UNIX™ MICROSYSTEM

The AT&T *UNIX* Microsystem offers 32-bit computer system designers and programmers complete system design capability. It provides the 32-bit building-block solution to system design and consists of a 32-bit microprocessor CPU with a family of 32-bit peripherals, including virtual memory, math, and I/O coprocessors; prototyping and development hardware and software tools; and software generation programs. The devices are available in 10 MHz, 14 MHz, and 18 MHz operating frequency versions and are compatible with other general-trade peripherals. *UNIX* System V is the operating system used during system development and application program design and provides the portability that protects your software investment.

WE® 32100 Microprocessor

The *WE* 32100 Microprocessor is a high-performance, single-chip, full 32-bit CPU, optimized for efficient operation in a high-level language environment. System memory is addressed over a 32-bit address bus using either virtual or physical addresses. The resulting memory space, over four billion bytes, greatly increases the flexibility of memory organization and provides ample space for program and data storage. A complete virtual memory system can be realized with the addition of the *WE* 32101 Memory Management Unit. The *WE* 32100 Microprocessor provides:

- Hardware support of the *UNIX* System process model
- Multiuser system support of *UNIX* System V
- Flexible, 15-level interrupt structure
- Nine 32-bit general-purpose registers and seven 32-bit special-purpose registers
- Four levels of execution privilege
- On-chip 64 x 32-bit instruction cache
- A **no-glue** coprocessor interface
- Synchronous or asynchronous interfacing to external devices
- Multiprocessor support.

WE 32101 Memory Management Unit

The *WE* 32101 Memory Management Unit (MMU) virtual memory coprocessor provides logical-to-physical address translation, memory organization, control, and access protection for the CPU. It supplies full hardware support for a demand-paged and demand-segmented virtual memory system implementation. Also performed are on-chip miss-processing and fault detection and resolution. Multiple MMU configurations are fully supported.

WE 32102 Clock

The *WE* 32102 Clock supplies the required two-phase, CMOS-level clock frequency source. Access is provided for an external oscillator to control the output frequency.

WE 32103 DRAM Controller

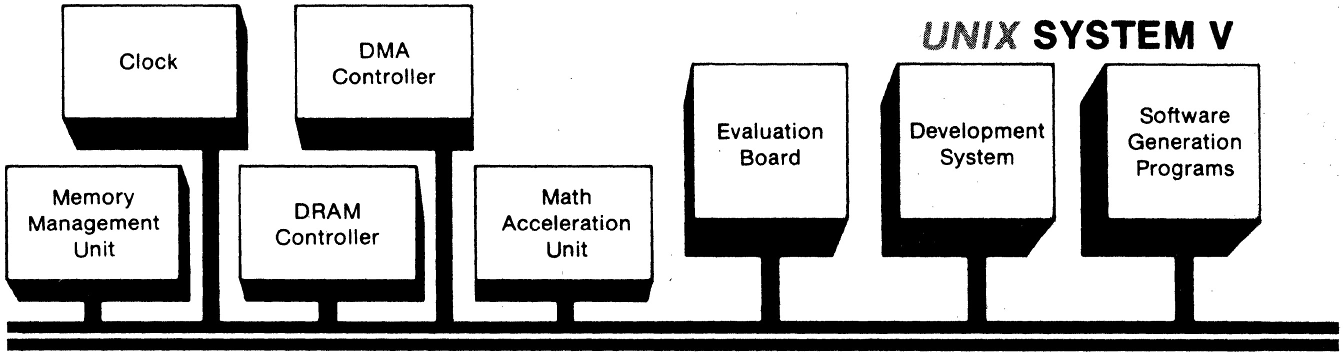
The *WE* 32103 DRAM Controller provides bus interface and control for a high-speed, high-capacity, main memory subsystem for the CPU. The DRAM controller is responsible for input address multiplexing, access and cycle time management, and refresh management of the DRAM subsystem. Pretranslated row access provides shorter paged translation times resulting in increased memory performance. A full error detection and correction device interface, including transparent memory scrubbing, is provided. Dual-port memory configurations are supported.

WE 32104 DMA Controller

The *WE* 32104 DMA Controller I/O coprocessor provides the ability to transfer large amounts of data quickly and efficiently between the main memory subsystem and I/O devices or between different memory locations. The DMA controller permits the full 32-bit system bus to be used without external logic and provides a separate 8-bit peripheral bus to connect I/O devices to the system bus. This allows concurrent operation with the CPU as well as greater system throughput. Four independent prioritized DMA channels are provided. Request chaining for channel initialization occurs without CPU intervention.

™ Trademark and ® registered trademark of AT&T.

UNIX SYSTEM V



WE **32106 Math Acceleration Unit**

The *WE* 32106 Math Acceleration Unit (MAU) provides IEEE standard floating point coprocessing capability for the CPU. The MAU can operate in peripheral mode, allowing operation with general-trade microprocessors, or as a coprocessor for the *WE* 32100 Microprocessor. It is compatible with the IEEE format for binary floating point arithmetic. Support for transcendental functions is provided via the *WE* 321SG Software Generation Programs.

WE **321DS Microprocessor Development System**

The *WE* 321DS Microprocessor Development System is a powerful collection of integrated hardware, software, and firmware tools that support development of *WE* 32100 CPU based applications. The *WE* 321AP Microprocessor Analysis Pod is a major development system component. Development system highlights include:

- An interactive monitor program and symbolic debugger
- A high-level C language debugger
- Physical/virtual mode software debugging
- In-circuit emulation of the CPU and MMU
- Symbolic tracing and disassembly capability for a Hewlett-Packard 64000 Logic Development System
- Integrated interface to a Hewlett-Packard 64000 Logic Development System
- User process control and file transfers into memory for a *UNIX* System V host processor.

WE **321EB Microprocessor Evaluation Board**

Prototyping and performance evaluation support for the *WE* 32100 CPU and the *WE* 32101 MMU are available using the *WE* 321EB Microprocessor Evaluation Board. The board features:

- 64 Kbytes of zero wait-state RAM
- 32 Kbytes of additional RAM
- An interactive monitor program and symbolic debugger
- Individually maskable interrupts
- Three independent, programmable 16-bit interval timers
- Jumper selectable wait states, interrupts, counters, and memory options
- Serial and parallel ports
- Access to the microprocessor bus
- MAU capability via optional MAU expansion board.

WE **321SG Software Generation Programs**

The *WE* 321SG Software Generation Programs (SGP) provide software support for the *WE* 32100 Microprocessor. The SGP runs under the *UNIX* System V and permits high-level language program coding in C language. It includes a C compiler, an assembler, a link editor, and utility programs. Using the SGP, all symbolic information is preserved for testing at the source level. The SGP provides:

- Efficient source and object file management via *UNIX* System V
- Utilities for reading and manipulating object code files
- Object code formatted for the Development System and Evaluation Board.

Additional Information

For additional information on the *UNIX* Microsystem, contact your AT&T Sales Account Representative, or call:

1-800-372-2447

82C201/82C202/82A203/82A204/82A205
PC/AT COMPATIBLE CHIPSet™

- **Fully IBM PC AT Compatible**
- **Flexible architecture allows usage in any iAPX 286 design**
- **Early ALE Generation**
- **Early RAS Generation**
- **Low Power CMOS Process Technology for 82C201 and 82C202, and Advance Low Power Schottky Process Technology for 82A203, 82A204 and 82A205**
- **6 Mhz Zero Wait State or 8 Mhz One Wait State Capability**
- **Complete System Board Memory Decode**
- **Configurable RAM Selects**
- **16 Bit to 8 Bit Conversion Logic**
- **Variable Wait State Selection**
- **24 mA sink and -3.3 mA source current for System Bus outputs**
- **Single 5 Volt Supply**

The PC/AT compatible CHIPSet is a 5 chip LSI implementation of most of the MSI/SSI logic used to control the IBM Personal Computer AT. The flexible architecture of the chip set allows it to be used in any iAPX 286 based system design. The 82C201 and 82C202 perform the functions of the Intel 82284 Clock Generator and Ready Interface, 82288 Bus Controller for iAPX286 processors, 8284A Clock Generator and Driver, and replace 30 other MSI/SSI devices in the IBM PC AT design. Significant new features have been added to enhance system performance while still maintaining PC AT compatibility.

Two signals, ALE and RAS, can be altered with the activation of the Early Mode select line ($\overline{\text{EMODE}}$). When $\overline{\text{EMODE}}$ is low, both signals become valid before the normal ALE and RAS signals. This allows the use of 120nsec DRAMS in a 6Mhz zero wait state system or 150nsec DRAMS in a 8Mhz one wait state system. Variable wait state selection is also provided to accommodate slower memories and peripherals where necessary.

The 82A203, 82A204, and 82A205 include most of the buffers and drivers required in an IBM PC AT compatible design. Advanced Schottky Bipolar process technology is used to implement these devices, allowing high speed and high source (-3.3mA) and sink (24mA) current capability.

82C431/82C432/82C433/82C434
ENHANCED GRAPHICS CHIPSet™

- **100% hardware and software compatible to IBM Enhanced Graphics Adapter card**
- **Supports IBM Color Graphics and Monochrome adapters, and Hercules Graphics modes**
- **Bit mapped graphics in four planes**
- **640 × 350 resolution for IBM Enhanced Color Display**
- **Light pen interface**
- **Full 16 color support in 640 × 200 and 320 × 200 pixels for IBM Color Display**
- **Supports 720 × 350 pixels for IBM Monochrome Displays**
- **Soft scrolls, Pans and Windows through a 1 M-pixels memory**
- **Supports 256K bytes of memory using 64K X 4 DRAMs**

The Enhanced Graphics CHIPSet offers a complete solution for implementing an IBM Enhanced Graphics Adapter compatible controller. The chip set provides a highly integrated solution, allowing a complete Enhanced Graphics controller implementation using 32 chips, including 256K bytes of display memory.

The chip set consists of the 82C431 Graphics Controller, 82C432 Sequencer, 82C433 Attributes Controller and 82C434 CRT Controller. The chip set supports color and monochrome direct drive displays in various modes. Other features include bit mapped graphics, light pen interface, and RAM loadable character generator. The chip set supports alphanumeric (AN) and all-points-addressable (APA) graphics modes, including all modes supported by the IBM Monochrome Display and Color/Graphics Adapters. Additionally, other modes provide 720 × 350 pixels support for the IBM Monochrome Display. It also provides full 16 color support for 320 × 200 pixel and 640 × 200 pixel resolutions for the IBM color display. The IBM Enhanced Color Display is supported with AN and APA graphics with a resolution of 640 × 350 pixels.

The 82C431 is packaged in 68-pin Plastic Leaded Chip Carrier (PLCC), 82C432 and 82C433 in 40-pin DIPs, and 82C434 in 84-pin PLCC.

F9450 High-Performance 16-Bit Bipolar Microprocessor

DESCRIPTION

The Fairchild F9450 microprocessor is the nucleus of a family of high-performance devices intended for commercial and military applications requiring sophisticated, high-speed, real-time processing. It has, on-chip, all of the functions necessary to perform complete floating-point operations without the use of a coprocessor. Other on-chip capabilities allow addressing of up to 2M words of memory and, with the addition of the optional F9451 Memory Management Unit (MMU), up to 16M words of memory.

Real-time processing is achieved through advanced architecture that incorporates two programmable timers, user-accessible general-purpose registers, a complete 16-level interrupt processor, and a comprehensive fault handler on the chip. Multiprocessing is supported by a flexible bus arbitration scheme, as well as process synchronization (test and set) instructions.

The F9450 instruction set is optimized for complex real-time applications. It implements the complete MIL-STD-1750A instruction set architecture (ISA) and its floating-point standard on a single chip.

The F9450 family of support circuits and systems provides additional capabilities, including memory-mapped expansion with the F9451 MMU and write protection with the F9452 Block Protect Unit (BPU). Additional support circuits are being developed.

Comprehensive software support for the F9450, including assemblers, loaders, simulators, and compilers, is provided by Fairchild and other sources. Software development for the F9450 can be performed using the VAX-11/7XX™ computers using the VMS™ operating system.

For complete information on available support circuits and software, contact your local Fairchild Sales Office or the Microcontroller Division.

Features

- **Single-Chip 16-Bit Microprocessor with 32- and 48-Bit Floating-Point Arithmetic On-Chip**
- **Fast Operation — 0.25 μs Add, 1.85 μs Integer Multiply, Capable of Greater than 1.5 MIPS Throughput**
- **Real-Time Processing: Two Programmable Timers, 16 Levels of Vectored Interrupt**
- **Address Space of Up to 2M Words, Expandable to 16M Words with Optional F9451**
- **Instruction Set Optimized for Real-Time Applications (MIL-STD-1750A ISA)**
- **Built-In Self-Test, Fault Handling, and Abort**
- **Twenty-Four User-Accessible Registers**
- **Built-In Multiprocessor Capabilities**
- **Single- and Double-Precision Integer Arithmetic**
- **Complete High-Level Language and Design Development Support Available**
- **Static Operation with Single Clock: 0-20 MHZ**
- **TTL Inputs and Outputs with 8 mA Drive Capability**
- **Small Size 64-Pin DIP or Optional Surface-Mount Packages**
- **Full Performance over −55°C to +125°C Operating Temperature Range**
- **Bipolar I³L® Technology**

F9451 Memory Management Unit (MMU)

DESCRIPTION

The F9451 Memory Management Unit (MMU) controller provides facilities to expand the memory addressing range of the F9450 CPU up to 16M words of physical memory and provides access protection mechanisms for instructions and data. The MMU subsystem consists of the F9451 controller together with four F93479 or equivalent static RAMs (SRAMs), used as instruction and data maps, and two octal buffers (54/74F245).

The MMU chip set works with the F9450, either by itself or together with the F9452 Block Protection Unit (BPU) to implement MIL-STD-1750A memory management and protection functions.

Features

- **Allows up to 16M Words of Memory Address Space**
- **Logical-to-Physical Address Translation**
- **Protection of the Logical Space in 4K Word Pages for:**
  - **—Access Key to Access Lock Match**
  - **—Write Protect (Data)**
  - **—Execute Protect (Instructions)**
- **On-Chip Cache Mechanism**
- **Two Translation Maps**
  - **—Instruction Map (256 x 16)**
  - **—Data Map (256 x 16)**
- **High-Performance over Military Temperature Range**
- **Static Operation with Single 0-20 MHz Clock**
- **TTL-Compatible Inputs and Outputs**
- **+5 V Power Supply and Injector Current Source Required**
- **64-Pin DIP or Surface Mount**
- **Bipolar LSI I³L Technology**

F9452 Block Protect Unit (BPU)

DESCRIPTION

The Fairchild F9452 Block Protect Unit (BPU) controller provides write protection for up to 1M word of physical memory for both CPU and DMA access in systems using the F9450 CPU. The BPU chip set works with the F9450 microprocessor, either by itself or together with the F9451 Memory Management Unit (MMU) to implement MIL-STD-1750A memory block protection functions.

A complete BPU consists of the F9452 controller and one F93479 or equivalent static RAM (SRAM) that is used for storage of CPU and DMA protection tables. Separate tables are maintained for CPU and DMA memory spaces. Global write protection is provided from reset until memory writes are enabled.

F9445 16-Bit Bipolar Microprocessor

DESCRIPTION

The F9445 is a 16-bit microprocessor implemented using Fairchild's Isoplanar Integrated Injection Logic ($I^3L^®$) technology. This bipolar technology and a sophisticated pipeline architecture combine to give the F9445 very fast execution times. The processor has eight program accessible registers and the capability of directly addressing 128K bytes (64K words) of memory. Up to 4M bytes of physical memory may be accessed using the F9444 memory management unit. The F9445 can address 62 I/O devices, handle 16 levels of priority interrupt, and perform fast direct memory access. It has control lines to provide operator-console functions and has an on-chip self-test program. The F9445 CPU is supported with a comprehensive family of LSI support circuits to permit cost and performance effective usage in high-performance microcomputer systems. The support circuits include the F9447 I/O Bus Controller, F9448 Programmable Multiport Interface, F9449 Multiple Data Channel Controller, F9444 Memory Management Unit, and F9470 Console Controller. It is also supported with a library of software packages, including editors, debuggers, macroassembler, relocating loader, real-time executive, interactive multi-user disk operating system and utilities, as well as high-level languages: FORTRAN, BASIC and PASCAL.

Features

- **Advanced Parallel Architecture Leading to Very Fast Execution Times—250 ns Register, 2.9 μs 16 × 16 Bit Multiply**
- **Directly Addresses Up to 128K Bytes of Memory with 11 Addressing Modes**
- **Eight Program-Accessible Registers (AC0, AC1, AC2, AC3, SP, FP, PC, PSW)**
- **Versatile Instruction Set Including Memory Reference, ALU, I/O, Stack, Multiply/Divide, and Floating Point Assist (Scale/Normalize) Instructions with 8-Bit Byte, 16-Bit Word or 32-Bit Double-Word Data**
- **Multi-Processing Capabilities**
- **Flexible Operator-Control Functions and Self-Test**
- **Static Operation with Single Clock Up to 24 MHz**
- **LS TTL Input/Output Structure with I^3L Internal Circuits**
- **40-Pin DIP Needing a Single +5 V Power Supply**
- **Full Military Temperature and Voltage Ranges**
- **Radiation-Tolerant Technology**
- **Comprehensive Family of Support Circuits**

SOFTWARE
F9450
MACRO Assembly Language

June 1985

DESCRIPTION

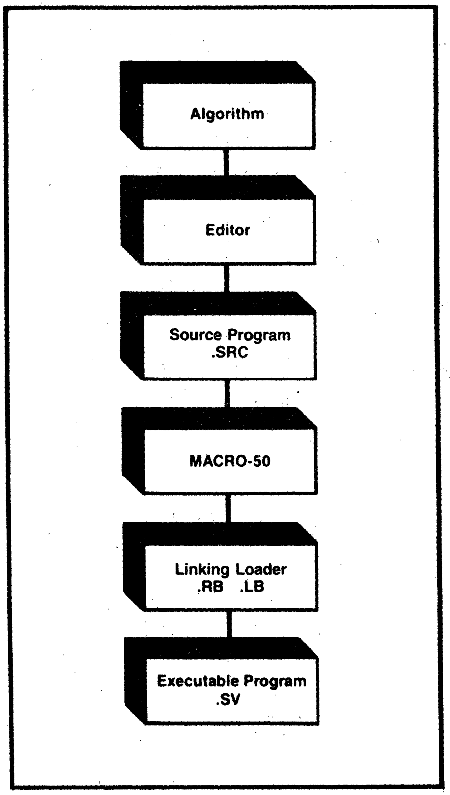
Fairchild's MACRO-50/RELOAD-50 program is an assembler and relocating loader for F9450 programming in absolute or relocatable code. MACRO-50 has the advantage of macro definition and expansion capability, and allows named operations with parameter passing, as in high-level languages. Using MACRO/RELOAD, you can develop libraries of modular programs for the F9450 high-performance 16-bit floating point microprocessor. These modules, ranging from simple routines to sophisticated system software, can then be loaded and linked into executable files and downloaded to your target machine RAM or EPROM programmer.

The MACRO-50 assembly language permits symbols for operation codes and labels. During assembly, it uses pseudo-ops for memory allocation and initialization, listing control, symbol table manipulation, interprogram communications, and repetitive or conditional controls. MACRO-50/RELOAD-50 is hosted on a VAX/VMS computer system.

The utility program LIBEDIT allows you to create, edit, and maintain libraries of relocatable modules. RELOAD-50 automatically includes those needed portions of a library linking your program.

FEATURES

Figure 1 Typical MACRO-50 Program Flow Chart



- **Libraries of Modules Simplify Program Development, Editing, Loading, and Linking**
- **Utilities to Aid in Downloading Code to RAM, PROM Programmer, or EPROM**
- **Absolute or Relocatable Object Code Offers Flexibility in Programming and File Manipulation**
- **Complete Macro Definition and Expansion Capabilities:**
  - **Symbolic (Character Mnemonic) Instructions Clarify Program Logic, Operations, and Sequences**
  - **Symbolic Addresses Create Consistent Data and Memory References and Help Debugging Tasks**
  - **Symbolic Parameters (Data, I/O Port Addresses) Provide Single-Location Changes and Adaptations to Global Macros**
- **Comment and Automatic Cross-Reference Capabilities Simplify Design, Debugging and Modification**
- **Pseudo-Ops Help Define Codes for New Instruction Mnemonics**
- **Choice of Single- or Double-Precision Numbers**
- **Simple Object Code Converter (SVTOLDM) Allows Use of Government-Owned F9450 Simulator (Not Fairchild-Supplied)**
- **Operates under VAX/VMS Version 3.2 or Later**

Z80 FAMILY

■ Z80® CPU/Central Processing Unit

Part Number	Features
Z8400	• 158 instructions, 8080A software compatibility • 8 MHz, 6 MHz, 4 MHz and 2.5 MHz clocks for the Z80H, Z80B, Z80A and Z80 • The extensive instruction set includes string, bit, byte, and word operations. Block searches and block transfers together with indexed and relative addressing. • The Z80 microprocessors and associated family of peripheral controllers are linked by a vectored interrupt system to be daisy-chained. • Duplicate sets of both general-purpose and flag registers, two 16-bit index registers. • On-chip dynamic memory refresh counter.

■ Z80® PIO/Parallel Input/Output Controller

Part Number	Features
Z8420	• A direct interface between Z80 microcomputer systems and peripheral devices. • Both ports have interrupt-driven handshake for fast response. • 4 programmable operating modes: byte input, byte output, byte input/output (Port A only), and bit input/output. • Programmable interrupts on peripheral status conditions. • Standard Z-80 Family bus-request and prioritized interrupt-request daisy chains implemented with out external logic. • 8 Port B outputs can drive Darlington transistors (1.5mA at 1.5V).

■ Z80® CTC/Counter/Timer Circuit

Part Number	Features
Z8430	• Four independently programmable counter/timer channels • Zero Count/Timeout outputs capable of driving Darlington transistors. • Selectable positive or negative trigger initiates timer operation. • Standard Z-80 Family daisy-chain interrupt structure. • Interfaces directly to the Z-80 CPU or for baud rate generation to the Z-80 SIO.

■ Z80® SIO/Serial Input/Output Controller

Part Number	Features
Z8440	• 2 independent full-duplex channels, with separate control and status lines for modems or other devices. • Data rates of 0 to 800K bits/second in the × 1 clock mode. • Synchronous protocols and Asynchronous protocols. • Receiver data registers quadruply buffered transmitter registers doubly buffered. • Highly sophisticated and flexible daisy chain interrupt vector

■ Z80® DART/Dual Asynchronous Receiver/Transmitter

Part Number	Features
Z8470	• 2 independent full-duplex channels with separate modem controls. • In × 1 clock mode, data rates are 0 to 800K bits/second with Z80A DART. • Receiver data registers are quadruply buffered; the transmitter is doubly buffered. • Programmable options include 1½ or 2 stopbits; even, odd or no parity: and × 1, × 16, × 32 and × 64 clock modes. • On-chip logic for ring indication and carrier detect status.

Preliminary Data Sheet **S65C51**

ASYNCHRONOUS COMMUNICATION INTERFACE ADAPTER

Features

- ☐ On-Chip Baud Rate Generator: 15 Programmable Baud Rates Derived from a Standard 1.8432MHz External Crystal (50 to 19,200 Baud)
- ☐ Programmable Interrupt and Status Register to Simplify Software Design
- ☐ Single +5 Volt Power Supply
- ☐ Serial Echo Mode
- ☐ False Start Bit Detection
- ☐ 8-Bit Bi-Directional Data Bus for Direct Communication With the Microprocessor
- ☐ External 16X Clock Input for Non-Standard Baud Rates (Up to 125K Baud)
- ☐ Programmable: Word Lengths; Number of Stop Bits; and Parity Bit Generation and Detection
- ☐ Data Set and Modem Control Signals Provided
- ☐ Parity: (Odd, Even, None, Mark, Space)
- ☐ Full-Duplex or Half-Duplex Operation
- ☐ 5, 6, 7, 8 and 9-Bit Transmission

General Description

The S65C51 is a CMOS Asynchronous Communication Adapter (ACIA) intended to provide interfacing for the microprocessors to serial communication data sets and modems. A unique feature is the inclusion of an on-chip programmable baud rate generator, with a crystal being the only external component required.

NEW-RECEIVE DATA FAST!

Dear IC MASTER User:

ANNOUNCING... A **new**, innovative way to request and receive up-to-date IC product data.

The IC MASTER introduces an IMMEDIATE response system. Operational **24 hours a day, 7 days a week,** you can now phone in your requests for the most current IC product data available from IC manufacturers who have product data sheets in the IC MASTER, at no cost to you. Here's all you do:

Step 1 **Phone 800-443-0100** and ask for Extension #518

Step 2 When asked, simply tell the operator the name(s) of the manufacturer whose part you are interested in... the **specific** part number you want information on... if you want a data sheet and/or an application note... and if you want a salesperson to call.

Step 3 Provide your name, title, company, address, and phone number.

That's all you do! We do the rest. Your request will be in the hands of the company you inquired about within 24 hours. We will follow up within a week to make sure your request was expedited and your needs were met.

It's important to us that we provide you with the best source of up-to-date IC product data available in the market... we've been doing it for over ten years, and we aren't stopping now.

We hope this **added new** service will contribute to a further reduction in your IC selection time.

G65SCXX Series
G65SC1XX Series

Microcircuits

CMOS G65SCXXX 8-Bit Microprocessor Family

Features

- CMOS family that is compatible with NMOS 6500 series microprocessors
- Uses single +5 volt power supply
- Low power consumption (4mA @ 1 MHz) allows battery-powered operation
- Enhanced instruction set: 27 additional op codes encompassing eight new instructions enhance software performance compared to existing NMOS 6500 microprocessor instruction set
  - —64 microprocessor instructions
  - —178 operational codes
  - —15 addressing modes
- Choice of 4K, 8K or 65K-byte addressable memory
- 1, 2, 3 or 4 MHz operation
- Choice of external or on-board clock generator operation
- On-board clock generator/oscillator can be driven by an external single-phase clock input, an RC network, or a crystal circuit
- Advanced memory access timing ($\phi 4$) on selected versions
- Early address valid allows use with slower memories
- Early write data for dynamic memories
- 8-bit parallel processing
- Decimal and binary arithmetic
- Pipeline architecture
- Programmable stack pointer
- Variable length stack
- Interrupt capability
- Non-maskable interrupt
- 8-bit bidirectional data bus
- "Ready" input (for single cycle execution)
- Direct memory access capability
- Bus compatible with M6800
- Available on selected versions, a memory lock output and bus enable input signals simplify multiprocessor designs
- Available in either 28 or 40 pin dual-in-line packaging

General Description

The G65SCXXX is a totally software-compatible microprocessor family manufactured using the state-of-the-art silicon gate CMOS process. The family consists of two series of devices: one series, designated G65SCXX is pin-to-pin compatible with NMOS versions of the 6500 currently on the market; the other series, designated G65SC1XX includes several enhancements not available with other designs. The family provides the designer with a wide selection of addressable memory ranges, on-board or external clocks, and input interrupt options. All of the microprocessors are software compatible within the group and all are bus compatible with MC6800 products.

As shown in Table I, the family includes 18 microprocessors of which three have on-chip oscillators while the others require an external clock generator. The G65SC02, G65SC102 or G65SC112 clock generator circuit may be driven by an external crystal, an RC network or by an external clock source. The versions of the microprocessor which require an external clock source are generally intended for multiprocessor applications where maximum timing control is necessary. The three family members with on-chip oscillators are intended for high performance, low cost operations where single phase inputs, crystals, or RC inputs provide the time base.

Ten of the microprocessors in the G65SCXX Series are pin-to-pin compatible with the NMOS 6500 microprocessors offered by several other manufacturers. However, the use of the leading-edge CMOS process technology ensures several software or programming enhancements not available to users of the NMOS 6500. The enhancements include two additional addressing modes, an expanded microprocessor instruction set (from 56 to 64 instructions), and expanded operational codes (from 151 to 178). In addition, a series of operational enhancements are provided which materially improve the effective use of the microprocessor. These enhancements are explained in Table V of the section of this data sheet devoted to system software and programming. This series of microprocessors provides the user an architecture and instruction set with which he is basically familiar (6502), the several operational enhancements notwithstanding, plus all of the advantages of leading edge CMOS technology; i.e., increased noise immunity, higher reliability, and greatly reduced power consumption.

NOTE: These devices can operate in any of the following clock generation modes: 1. External crystal 2. External RC network 3. $\phi 0$(IN) from external clock source

G65SC150

Microcircuits

CMOS Communications Terminal Unit (Telecommunication Microcomputer)

Features

- Generates signals compatible with switched telephone networks or packet switched data networks
- Provides Dial Pulse (DP), Dual Tone Multi-Frequency (DTMF), and 0-600 baud modem signaling capabilities
- Low power mode (300 μA) enables telephone line-powered operation
- External microprocessor address and data bus facilitates memory and I/O expansion
- On-chip memory: 2K bytes ROM
  64 bytes RAM
- Standard DTMF and modem frequencies can be generated which are accurate to ±1.0% with a 3.58 MHz crystal
- Two sine wave generators
- 6800 and 6500 bus compatibility
- Utilizes G65SC00 microprocessor as CPU
- 27 TTL compatible I/O lines
- Bus expandable to address 65K bytes of external memory
- Single +5 volt power supply
- Available in 68-pin chip carriers

General Description

The GTE G65SC150 Communications Terminal Unit (CTU) is a single chip telecommunications microcomputer manufactured using state-of-the-art silicon gate CMOS process technology, which is optimized for telephone line signaling and data transmission applications. A functional block diagram is shown which illustrates the major system functions that are included on the integrated circuit.

The CTU uses the GTE G65SC00 8-bit microprocessor which executes the complete G65SC00 series instruction set. With 2K bytes of ROM and 64 bytes of RAM, the CTU operates as a single-chip microcomputer.

The internal bus interconnects all microcomputer functions. The address and data bus buffers permit expansion of ROM, RAM and memory mapped I/O using the full 65K addressing space of the microprocessor. A peripheral mode is available for use with multiprocessor systems. A test and prototyping mode switches internal ROM addresses to external access. An on-chip oscillator may be driven by an external clock source.

The telecommunications interface circuitry consists of a timer, row/receive counter, column/transmit counter and dual sine wave generators. In addition, 27 general purpose I/O lines can be used for keyboard, telephone Dial Pulse (DP) signaling, phone line control, and other peripheral devices.

GTE

G65SC802
G65SC816

Microcircuits

CMOS 8-Bit/16-Bit Microprocessor Family

Features

- Advanced CMOS design for low power consumption and increased noise immunity
- Emulation mode for total software compatibility with 6502 designs
- Full 16-bit ALU, Accumulator, Stack Pointer, and Index Registers
- Direct Register for "zero page" addressing
- 24 addressing modes (including 13 original 6502 modes)
- Wait for Interrupt (WAI) and Stop the Clock (STP) instructions for reduced power consumption and decreased interrupt latency
- 91 instructions with 255 opcodes
- Co-Processor (COP) instruction and associated vector
- Powerful Block Move instructions

Features (G65SC802 Only)

- 8-Bit Mode with both software and hardware (pin-to-pin) compatibility with 6502 designs (64 KByte memory space)
- Program selectable 16-bit operation
- Choice of external or on-board clock generation

Features (G65SC816 Only)

- Full 16-bit operation with 24 address lines for 16 MByte memory
- Program selectable 8-Bit Mode for 6502 coding compatibility.
- Valid Program Address (VPA) and Valid Data Address (VDA) outputs for dual cache and DMA cycle steal implementation
- Vector Pull ($\overline{\text{VP}}$) output indicates when interrupt vectors are being fetched. May be used for vectoring/prioritizing interrupts
- Abort interrupt and associated vector for interrupting any instruction without modifying internal registers
- Memory Lock ($\overline{\text{ML}}$) for multiprocessor system implementation

General Description

The G65SC802 and G65SC816 are ADV-CMOS (ADVanced CMOS) 16-bit microprocessors featuring total software compatibility with 8-bit NMOS and CMOS 6500 series microprocessors. The G65SC802 is pin-to-pin compatible with 8-bit 6502 devices currently available, while also providing full 16-bit internal operation. The G65SC816 provides 24 address lines for 16 MByte addressing, while providing both 8-bit and 16-bit operation.

Each microprocessor contains an Emulation (E) mode for emulating 8-bit NMOS and CMOS 6500-Series microprocessors. A software switch determines whether the processor is in the 8-bit emulation mode or in the Native 16-bit mode. This allows existing 8-bit system designs to use the many powerful features of the G65SC802 and G65SC816.

The G65SC802 and G65SC816 provide the system engineer with many powerful features and options. A 16-bit Direct Page Register is provided to augment the Direct Page addressing mode, and there are separate Program Bank Registers for 24-bit memory addressing. Other valuable features include:

- An Abort input which can interrupt the current instruction without modifying internal registers.
- Valid Data Address (VDA) and Valid Program Address (VPA) outputs which facilitate dual cache memory by indicating whether a data or program segment is being accessed.
- Vector modification by simply monitoring the Vector Pull ($\overline{\text{VP}}$) output.
- Block Move instructions.

GTE Microcircuits' G65SC802 and G65SC816 microprocessors offer the design engineer a new freedom of design and application, and the many advantages of state-of-the-art ADV-CMOS technology.

CMOS Static Clock Controller/Generator

Features

- Generates System Clocks for CMOS or NMOS Microprocessors and Peripherals
- Complete Control Over System Clock Operation for Very Low System Power
  - ▸ Stop-Oscillator
  - ▸ Low Frequency
  - ▸ Stop-Clock
  - ▸ Full Speed Operation
- DC to 25 MHz Operation (DC to 8 MHz System Clock)
- Generates Both 50% and 33% Duty Cycle Clocks (Synchronized)
- Uses a Parallel Mode Crystal Circuit or External Frequency Source
- TTL/CMOS Compatible Inputs/Outputs
- Very Low Power Consumption
- 24-Pin Slimline Dual-In-Line or 28-Pad Square LCC Package Options
- Single +5V Power Supply
- Commercial, Industrial and Military Temperature Ranges Available

Description

The Harris 82C85 Static CMOS Clock Controller/Generator provides simple, complete control of static CMOS system operating modes and supports full speed, slow, stop-clock and stop-oscillator operation. While directly compatible with the Harris 80C86/80C88 16-bit Static CMOS Microprocessor Family, the 82C85 can also be used for general purpose system clock control.

For static system designs, separate signals are provided on the 82C85 for stop (S0, S1, $\overline{\text{S2}}/\overline{\text{STOP}}$) and start (START) control of the crystal oscillator and system clocks. A single control line ($\overline{\text{SLO}}$/FST) determines 82C85 fast (crystal/EFI frequency divided by 3) or slow (crystal/EFI frequency divided by 768) mode operation. Automatic maximum mode 80C86/88 software HALT instruction decode logic in the 82C85 enables software-based clock control. Restart logic insures valid clock start-up and complete synchronization of system clocks.

The 82C85 is manufactured using the Harris advanced Scaled SAJI IV CMOS process. In addition to clock control circuitry, the 82C85 also contains a crystal controlled oscillator (up to 25 MHz), clock generation logic, complete "Ready" synchronization and reset logic. This permits the designer to tailor the system power-performance product to provide optimum performance at required power levels.

CAUTION: Electronic devices are sensitive to electrostatic discharge. Proper I.C. handling procedures should be followed.

82C37A

CMOS High Performance Programmable DMA Controller

Features

- **Compatible with the NMOS 8237A**
- **Four Independent Maskable Channels with Autoinitialization Capability**
- **Expandable to any Number of Channels**
- **Memory-to-memory Transfers**
- **Static CMOS Design Permits Low Power Operation**
  - **ICCOP = 2 mA/MHz Maximum**
  - **ICCSB = 10 μA Maximum**
- **Fully TTL/CMOS Compatible**
- **High Speed Data Transfers up to 4 MBytes/sec with 8 MHz Clock**
- **Upgraded Capabilities Allow Software Read of Internal Registers**

Description

The 82C37A is an enhanced version of the industry standard 8237A (DMA) Direct Memory Access) controller, fabricated using Harris' advanced SAJI (self aligned junction isolated) CMOS process. Pin compatible with NMOS designs, the 82C37A offers increased functionality, improved performance, and dramatically reduced power consumption. The fully static design permits gated clock operation for even further reduction of power.

The 82C37A controller can improve system performance by allowing external devices to transfer data directly to or from system memory. Memory-to-memory transfer capability is also provided, along with a memory block initialization feature. DMA requests may be generated by either hardware or software, and each channel is independently programmable with a variety of features for flexible operation.

The 82C37A is designed to be used with an external address latch, such as the 82C82 CMOS to demultiplex the most significant 8 bits. The 82C37A can be used with industry standard microprocessors such as 80C86, 80C88, 8088, 8085, 8086, Z80, NSC800, 80186 and others.

Multimode programmability allows the user to select from three basic types of DMA services, and reconfiguration under program control is possible even with the clock to the controller stopped. Each channel has a full 64K address and word count range, and may be programmed to autoinitialize these registers following DMA termination (end of process).

Features

- **Single Chip UART/BRG**
- **DC to 10 MHz Operation, (DC to 625K Baud)**
- **Crystal or External Clock Input**
- **On Chip Baud Rate Generator 1 to 65535 Divisor Generates 16X Clock**
- **Prioritized Interrupt Mode**
- **Fully TTL/CMOS Compatible**
- **Microprocessor Bus Oriented Interface**
- **80C86/80C88 Compatible**
- **Scaled SAJI IV CMOS Process**
- **Low Power - 1 mA/MHz Typical**
- **Modem Interface**
- **Line Break Generation and Detection**
- **Loopback and Echo Modes**
- **Doubled Buffered Transmitter and Receiver**
- **Single 5V Supply**

Description

The 82C50A Asynchronous Communication Element (ACE) is a high performance programmable Universal Asynchronous Receiver/Transmitter (UART) and Baud Rate Generator (BRG) on a single chip. Using Harris Semiconductor's advanced Scaled SAJI IV CMOS Process, the ACE will support data rates from DC to 625K baud (0-10 MHz clock).

The ACE's receiver circuitry converts start, data, stop, and parity bits into a parallel data word. The transmitter circuitry converts a parallel data word into serial form and appends the start, parity, and stop bits. The word length is programmable to 5, 6, 7, or 8 data bits. Stop bit selection provides a choice of 1, 1.5, or 2 stop bits.

The Baud Rate Generator divides the clock by a divisor programmable from 1 to 2^{16}-1 to provide standard RS-232C baud rates when using any one of three industry standard baud rate crystals (1.8432 MHz, 2.4576 MHz, or 3.072 MHz). A programmable buffered clock output ($\overline{\text{BAUDOUT}}$) provides either a buffered oscillator or 16X (16 times the data rate) baud rate clock for general purpose system use.

To meet the system requirements of a CPU interfacing to an asynchronous channel, the modem control signals $\overline{\text{RTS}}$, $\overline{\text{CTS}}$, $\overline{\text{DSR}}$, $\overline{\text{DTR}}$, $\overline{\text{RI}}$, $\overline{\text{DCD}}$ are provided. Two general purpose outputs, $\overline{\text{OUT1}}$ and $\overline{\text{OUT2}}$, are available for system use. Inputs and outputs have been designed with full TTL/CMOS compatability in order to facilitate mixed TTL/NMOS/CMOS system design.

The 82C50A has ten accessible registers that are used to control 82C50A operations, determine status, and to transmit and receive data.

HARRIS

82C52

CMOS Serial Controller Interface

Features

- SINGLE CHIP UART/BRG
- DC TO 16MHz OPERATION
- CRYSTAL OR EXTERNAL CLOCK INPUT
- ON CHIP BAUD RATE GENERATOR
  . . . 72 SELECTABLE BAUD RATES
- INTERRUPT MODE WITH MASK CAPABILITY
- MICROPROCESSOR BUS ORIENTED INTERFACE
- 80C86 COMPATIBLE
- SCALED SAJI IV CMOS PROCESS
- SINGLE 5V POWER SUPPLY
- LOW POWER – 1mA/MHz TYPICAL
- MODEM INTERFACE
- LINE BREAK GENERATION AND DETECTION
- LOOPBACK AND ECHO MODES

Description

The 82C52 is a high performance programmable Universal Asynchronous Receiver/Transmitter (UART) and Baud Rate Generator (BRG) on a single chip. Utilizing the Harris advanced Scaled SAJI IV CMOS process, the 82C52 will support data rates from D.C. to 1M baud asynchronously with a 16X clock (0-16 MHz clock frequency).

The on-chip Baud Rate Generator can be programmed for any one of 72 different baud rates using a single industry standard crystal or external frequency source. A unique pre-scale divide circuit has been designed to provide standard RS-232-C baud rates when using any one of three industry standard baud rate crystals (1.8432 MHz, 2.4576 MHz, or 3.072 MHz).

A programmable buffered clock output (CO) is available and can be programmed to provide either a buffered oscillator or 16X baud rate clock for general purpose system usage.

Inputs and outputs have been designed with full TTL/CMOS compatibility in order to facilitate mixed TTL/NMOS/CMOS system design.

Description

The HD-6406 (PACI) is a high performance programmable Universal Asynchronous Receiver/Transmitter (UART) and Baud Rate Generator (BRG) on a single chip. Utilizing Harris Semiconductor's advanced Scaled SAJI IV CMOS process, the PACI will support data rates from DC to 1Mbaud (0-16MHz clock). In addition to all standard UART functions, the PACI includes a complete Data Communications Equipment (DCE) interface.

Provision is made for DMA control of the PACI so that operation at the higher data rates is not hindered by slow microprocessor response times. An ALE control input permits direct interfacing to multiplexed data/address buses common to many microprocessors.

The interrupt structure of the PACI is user-programmable and can be configured to provide a single interrupt for any status change. A subsequent read of an internal status register will identify the source of the interrupt. If desired, the PACI can also provide separate hardware interrupt outputs for the receiver, transmitter and modem status changes. Separate error condition outputs can be used to pinpoint the exact cause of any detected error condition.

HD64180
High Integration 8-Bit CMOS CPU

PRELIMINARY

HITACHI

GENERAL DESCRIPTION

Based on a microcoded execution unit and advanced CMOS manufacturing technology, the Hitachi HD64180 is an 8-bit CPU, which provides high performance, reduced system cost, and low power operation, while maintaining compatibility with the large base of industry-standard 8-bit software.

■ FEATURES

- Central Processing Unit (CPU)
  - Upward compatible with existing Z80, 8085 and 8080 software
  - Fast (17-clock) 8-bit multiple with 16-bit result
- Memory Management Unit (MMU)
  - Supports 512k-bytes memory and 64k-bytes I/O address space
- 12-Level Vectored Interrupt Controller
  - Supports 8 internal and 4 external interrupt sources
- 2-channel Direct Memory Access Controller (DMAC)
  - Allows memory-to-memory, memory-to-I/O, and memory-to-memory-mapped-I/O transfers
- 2-channel Full Duplex Asynchronous Serial Communications Interface (ASCI)
  - Speeds from 150 baud to 38,400 baud
  - Programmable Baud Rate Generator and Modem Signal Controls
- 1-channel Clocked Serial I/O Port (CSI/O)
  - For high-speed interprocessor communication (up to 300k bps at 6 MHz)
- 2-channel 16 bit Programmable Reload Timer (PRT)
  - For timing and output waveform generation
- Dynamic RAM Refresh Circuit
  - Refreshes dynamic RAMs without the need for additional external support chips
- "Dual Bus" Interface
  - Compatible with 68xx and 80xx families
- Three Low Power Modes
  - SLEEP, IOSTOP, and SYSTEM STOP
- CMOS Process Technology
  - Fully TTL compatible

HD63484-8 Advanced CRT Controller (ACRTC)

AUGUST 1985

HITACHI

■ GENERAL DESCRIPTION

The Advanced CRT Controller (ACRTC) integrates all CRT and graphic control functions on a single chip. It is implemented using Hitachi's 2-micron CMOS technology. The ACRTC's design is based on a bit-mapped technology, and it has significantly more control functions than the previous generation HD6845S (CRTC).

This microcomputer peripheral device, which is capable of controlling raster scan type CRTs, is designed for a wide range of applications. The ACRTC is designed to interface with both 8- and 16-bit buses and operates with microprocessors such as the Hitachi HD64180, the 68000, and the 8086. It has three on-chip processors which relieve the system CPU of many complex real-time tasks. This reduces CPU software overhead and enhances system throughput. Furthermore, the ACRTC has three modes: character only, graphic only, and multiplexed character/graphic. This permits it to be utilized in applications ranging from character-only display devices to large full-graphic systems.

■ FEATURES

- High speed graphic drawings
  - Drawing rate : Maximum 500 ns/pixel (Color drawing)
  - Drawn graphics : Dot, Line, Rectangle, Poly-line, Poly-gon, Circle, Ellipse, Paint, Copy, etc.
  - Drawn colors : 16-bit/word
    1-, 2-, 4-, 8-, 16-bit/pixel (5 types)
    monochrome to max. 64k colors.
- Large frame memory space
  - Maximum 2M bytes graphic memory
    128k bytes character memory
    separated from the MPU memory
  - Available to maximum 4096 × 4096 high-resolution CRT (1 bit/pixel mode)
- Various CRT display controls
  - Split screens (3 displays and 1 window)
  - Zooming up (1 to 16 times)
  - Scroll (Vertical and horizontal)
  - Independent control of X and Y zoom factors
- External synchronization
  - Synchronization between ACRTCs or between the ACRTC and external device (ex. TV system or other controller)
- Two programmable cursors
- Three access modes
  - Non-interleaved (single access), interleaved, and superimposed modes
- Three scan modes
  - Non-interlace, Interlace Sync. and Interlace Sync. & Video modes
- DMA interface
- Interrupt request to MPU
- 256 characters/line, 32 rasters/line, 4096 rasters/screen
- 38 high-level commands
- Maximum clock frequency 8 MHz
- +5V single power supply
- CMOS, power consumption: 400 mW (maximum)

HITACHI

The HD63701X0 is a high performance 8-bit CMOS single chip microcomputer unit (MCU) which, including 4k bytes of PROM, is pin compatible with the HD6301X0.

The HD63701X0 contains 4k bytes of PROM, 192 bytes of RAM, serial communication interface and 53 parallel I/O pins in addition to CPU. It includes functions of halt, memory ready, low speed access and releasing external bus at system expansion.

The HD63701X0 is available in a 64-pin shrunk plastic package. It can be programmed in the same procedure as 2732A type EPROM.

■ FEATURES

- Instruction Set Compatible with the HD6301X0
- 4k Bytes of PROM (compatible with 2732A type)
- 192 Bytes of RAM
- 53 Parallel I/O Pins
  24 I/O Common Pins (Port 2, 3, 6)
  21 Output Pins (Port1, 4, 7)
  8 Input Pins (Port 5)
- Driving Darlington Transistor (Port 2, 6)
- 16-bit Programmable Timer
  Input Capture Register x 1
  Free Running Counter x 1

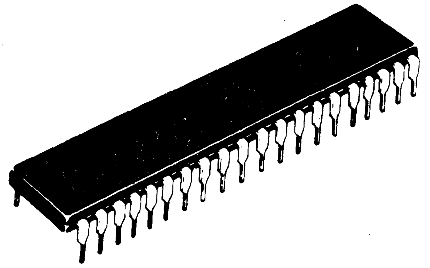
HITACHI

The HD63705V0 is an 8-bit CMOS single chip microcomputer unit (MCU) which includes 4k bytes of PROM and is object code compatible with the HD6305V0.

This MCU contains a CPU, clock oscillator, 4k bytes of PROM, 192 bytes of RAM, 31 parallel I/O pins, two timers and a serial communication interface (SCI).

In addition to CMOS technology, it provides power saving STOP, WAIT and STANDBY modes, further reducing its already low power consumption.

HD63705V0P, HD637A05V0P,
HD637B05V0P



(DP-40)

■ HARDWARE FEATURES

- Pin compatible with HD6305V0 and HD6305U0
- 4096 bytes of PROM
- 192 bytes of RAM
- 31 I/O terminals
- Two Timers
  - a 8-bit timer with a 7-bit prescaler (software programmable prescaler ; event counter)
  - a 15-bit timer (capable of being used as the SCI clock divider)
- On-chip serial interface circuit (synchronized with clock)
- Six interrupts (two external, two timer, one serial and one software)
- Low power modes
  - Wait mode .... Internal oscillator remains active. The CPU processing is halted. The timer, the SCI, and interrupts can function normally. The contents of all registers remain unchanged, except that I bit of the condition code register is cleared.
  - Stop mode .... Internal oscillator is halted. RAM, I/O terminals and all registers except I bit of the condition code register, bits 6 and 7 of the timer control register, and bits 4, 5, 6 and 7 of the SCI status register remain unchanged.
  - Standby mode .... Internal oscillator is halted. The data of RAM is unchanged. The MCU internal registers are reset.
- Minimum instruction cycle time

HD63705V0	1μs (f = 1 MHz)
HD637A05V0	0.67μs (f = 1.5 MHz)
HD637B05V0	0.5μs (f = 2 MHz)

Wide operating range

HD63705V0	f = 0.1 to 1 MHz (Vcc = 5V ± 10%)
HD637A05V0	f = 0.1 to 1.5 MHz (Vcc = 5V ± 10%)
HD637B05V0	f = 0.1 to 2 MHz (Vcc = 5V ± 10%)

- Complete development system support by an emulator
- Operating modes .... MCU mode

IMS T414 transputer

IMS T414: The IMS T414 integrates a 32-bit microprocessor, four standard transputer communications links, 2K bytes of on-chip RAM, a memory interface and peripheral interfacing on a single 1.5 micron CMOS chip.

Processor: The design of the T414 achieves compact programs, efficient high level language implementation and provides direct support for the occam model of concurrency. Procedure calls, process switching and interrupt latency are all sub-microsecond. The T414 provides high performance arithmetic and direct support for floating point operations.

The processor shares its time between any number of concurrent processes. A process which is waiting for communication or a timeout does not consume any processor time. Two levels of process priority enable fast interrupt response to be achieved.

Links: The T414 uses a DMA block transfer mechanism to transfer messages between its memory and another transputer product via the INMOS links. The link interfaces and the processor all operate concurrently, allowing the processing to continue while the data is being transferred on all of the links.

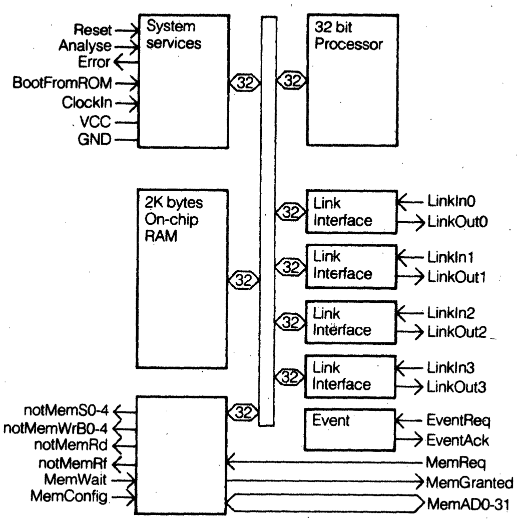
Memory: The 2K bytes of RAM provide a maximum data rate of 80 Mbytes/s with multiport access for the processor and links.

Memory interface: The T414 can directly access a linear address space up to 4 Gbytes. The 32 bit wide memory interface uses multiplexed data and address lines and provides a data rate of up to 25 MBytes/s. A configurable memory controller provides all timing, control and DRAM refresh signals for a wide variety of mixed memory systems.

Peripheral interface: The memory controller supports memory mapped peripherals, which may use DMA. Links may be interfaced to peripherals via an INMOS link adaptor. A peripheral can request attention via the event pin.

Time: The processor includes timers for both high and low priority processes.

T414 block diagram



Error handling: High-level language execution is made secure with array bounds checking, arithmetic overflow detection, etc. A flag is set when an error is detected. The error can be handled internally by software or externally by sensing the error pin. System state is preserved for subsequent analysis.

Other Products: The IMS T212 16-Bit Transputer provides a non-multiplexed 100ns cycle external memory interface optimized for fast static RAM. It is both software and hardware compatible with the IMS T414. The IMS C001 and IMS C002 Link Adaptors allow INMOS Serial Links to be connected to a wide variety of industry standard processors and peripherals. The IMS B001, IMS B002 and IMS B004 Evaluation Boards and IMS D100, IMS D600 and IMS D700 Transputer Development System are also available to ease evaluation and design of transputer systems.

IMS C001 link adaptor

Features

- High performance system interconnect
- Two handshaken byte-wide interfaces
- INMOS serial link
- 10M bits/sec data rate
- Advanced 1.5 micron CMOS technology
- Standard 600 mil 28 pin DIP

Applications

- Programmable I/O pins for a transputer
- High performance handshaken serial link between microprocessor systems
- Link between transputers running at different clock frequencies

FOUR-BIT CMOS MICROPROCESSOR SLICE

PRELIMINARY
IDT39C01C

MICROSLICE™ PRODUCT

FEATURES:

- Low power
  - —I_{CC} (max.)
    Military—35mA
    Commercial—30mA
- Fast
  - —Meets existing 2901C speeds
- Eight-function ALU
  - —Performs addition, two subtraction operations and five logic functions on two source operands
- Expandable
  - —Longer word lengths achieved through cascading any number of IDT39C01Cs
- Improved V_{CC} tolerance
  - —±10% guaranteed for both commercial and military temperature ranges
- Four status flags
  - —Carry, overflow, negative and zero
- Pin compatible and functionally equivalent to the 2901A,B,C

DESCRIPTION:

The IDT39C01C is a high-speed, cascadable ALU which can be used to implement CPUs, peripheral controllers and programmable microprocessors. The IDT39C01C's microinstruction flexibility allows for easy emulation of most digital computers.

This extremely low-power yet high-speed ALU consists of a 16-word by 4-bit two-port RAM; a high-speed ALU; and the required shifting, decoding and multiplexing logic. It is expandable in 4-bit increments, contains a flag output along with three-state data outputs, and can easily use either a ripple carry or full look-ahead carry. The nine bit microinstruction word is organized into three groups of three bits each and selects the ALU destination register, ALU source operands and the ALU function.

The IDT39C01C is fabricated using CEMOS™ II, a single poly double metal CMOS technology designed for high-performance and high-reliability.

The IDT39C01C is a pin compatible, performance-enhanced, functional replacement for all versions of the 2901.

12-BIT CMOS MICROPROGRAM SEQUENCER

PRELIMINARY
IDT39C10B

MICROSLICE™ PRODUCT

FEATURES:

- Low-power
  - —I_{CC} (max.)
    Military — 100mA
    Commercial — 80mA
- Fast
  - —Meets 2901A speeds and output drive
- 33-Deep stack
  - —Accommodates highly nested loops and subroutines microcode
- 12-Bit address width
- 12-Bit internal loop counter
- 16 powerful microinstructions
- 3 enables control branch address sources
- Available in 40-pin DIP and 44-pin LCC

DESCRIPTION:

The IDT39C10B microprogram sequencer is designed for use in high-performance microprogram state machines. This microprogram sequencer is intended for use in controlling the sequence of microinstructions executed in the microprogram memory. The IDT39C10B provides several conditional branch instructions that allow branching to any microinstruction within the 4K microword address space. A 33-deep last-in, first-out stack provides for a very powerful microprogram subroutine return linkage and looping capability. With this depth of a microprogram return stack, the microprogrammer has maximum flexibility in nesting subroutines and loops. The counter contained in the IDT39C10B provides for microinstruction loop counts of up to 4096 in terms of total count length.

The IDT39C10B provides a 12-bit address to the microprogram memory. This microprogram sequencer selects one of four sources for the address: these are (1) the microprogram address register, (2) external direct input, (3) internal register counter, and (4) the 33-deep LIFO stack. The microprogram counter usually contains an address that is one greater than the microinstruction currently being executed in the microprogram pipeline register.

The IDT39C10B is fabricated using CEMOS™II, a single poly, double metal CMOS technology designed for high performance and high reliability. This device is a pin-compatible, performance-enhanced, functional replacement for the 2910A.

CMOS CARRY LOOKAHEAD GENERATOR

IDT39C02A

MICROSLICE™ PRODUCT

FEATURES:

- Provides lookahead carries across any number of 4-bit microprocessor ALUs
- Very high-speed and output drive over full temperature and voltage supply extremes
- 6ns typical propagation delay
- I_{OL} = 32mA over full military temperature range
- CMOS power levels (5μW typ. static)
- Both CMOS and TTL output compatible
- Substantially lower input current levels than bipolar (5μA max.)
- 100% product assurance screening to MIL-STD-883, Class B available
- JEDEC standard pinout for DIP and LCC

DESCRIPTION:

The IDT39C02A is a high-speed carry lookahead generator built using advanced CEMOS™ II, a dual metal 1.5μm CMOS technology. The IDT39C02A is generally used with an arithmetic logic unit to provide high-speed lookahead over larger word lengths.

The IDT39C02A is a pin-compatible, performance enhanced, functional replacement for all versions of the 2902.

16-BIT CMOS MICROPROGRAM SEQUENCER

ADVANCE INFORMATION
IDT49C410

MICROSLICE™ PRODUCT

FEATURES:

- 16-Bit wide address path
  - —Address up to 65536 words of microprogram memory
- 16-Bit loop counter
  - —Pre-settable down-counter for counting loop iterations and repeating instructions
- Low power CEMOS™ II
  - —I_{CC} (max.)
    Military — 90mA
    Commercial — 110mA
- Fast
  - —Supports 100ns cycle times
- 33-Deep word stack
  - —Accomodates highly nested microcode and interrupt intensive applications
- 16 Powerful microinstructions
  - —Executes 16 sequence control instructions
- Available in 48-pin DIP (600 mil), THINDIP (400 mil x 70 mil centers), and LCC
- Three enables control branch address sources
- Four address sources
  - —Microprogram address can be selected from microprogram counter, direct input, push/pop stack, or holding register
- 2910A Instruction compatiblity
  - —Instruction, function and opcode compatible with the 2910A
- Military product available 100% screened to MIL-STD-883, Class B

DESCRIPTION:

The IDT49C410 is architecture and function code compatible with the 2910A but has been expanded to a 16-bit address path, thus allowing for programs up to 65536 words in length. It is a microprogram address sequencer intended for controlling the sequence of execution of microinstructions stored in microprogram memory. Besides the capability of sequential access, it provides conditional branching to any microinstruction within its 65536 microword range.

The 33-deep stack provides microsubroutine return linkage and looping capability. The deep stack can be used for interrupt intensive and highly nested microcode applications. Microinstruction loop count control is provided with a count capacity of 65536.

During each microinstruction, the microprogram controller provides a 16-bit address from one of four sources: 1) the microprogram address register (μPC), which usually contains an address one greater than the previous address; 2) an external (direct) input (D); 3) a register/counter (R) retaining data loaded during a previous microinstruction; or 4) a last-in, first-out stack (F).

The IDT49C410 is fabricated using CEMOS II, a single poly double metal CMOS technology designed for high-performance and high-reliability.

The IDT49C410 is a pin compatible, performance-enhanced, easily upgradable version of the 2910A.

The IDT49C410 is available in a 48-pin DIP (600 mil x 100 mil centers or space-saving 400 mil x 70 mil centers) and LCC.

16-BIT CMOS MICROPROCESSOR SLICE

ADVANCE INFORMATION
IDT49C402

MICROSLICE™ PRODUCT

FEATURES:

- High performance CEMOS™ II
- 64-Word x 16-bit RAM
  - —2 output ports
  - —1 input port
- Instruction set functionally identical to 2901
  - —8 source operand pairs
  - —8 ALU operations
  - —8 destination functions
- 8 additional new destination functions
- Fully cascadable
- 4 status flags
- 16-bit Q register
- 68-pin PGA, DIP (600 mil, 70 mil centers), LCC (25 and 50 mil centers)
- Military product 100% screened to MIL-STD-833, Class B

DESCRIPTION:

The IDT49C402 is a high-speed, fully cascadable 16-bit CMOS microprocessor slice unit which combines the standard functions of four 2901s and a 2902 with additional control features aimed at enhancing the performance of bit-slice microprocessor designs.

The IDT49C402 includes all of the normal functions associated with standard 2901 bit-slice operation: (a) a 3-bit instruction field (I_0,I_1,I_2) which controls the source operand selection for the ALU (b) a 3-bit microinstruction field (I_3,I_4,I_5) used to control the eight possible functions of the ALU (c) eight destination control functions which are selected by the microcode inputs (I_6,I_7,I_8) and (d) a tenth microinstruction input, I_9, offering eight additional destination control functions. This I_9 input, in conjunction with I_6, I_7, I_8, allows for shifting the Q register up and down, loading the RAM or Q register directly from the D inputs without going throught the ALU, and new combinations of destination functions with the RAM A-port output available at the Y output pins of the device. This eliminates bottlenecks of inputting data to the on-board RAM.

Also featured is an on-chip two-port RAM that contains 64 words by 16 bits, which is four times the number of working registers in a 2901.

The IDT49C402 is fabricated using CEMOS™II, a single poly double metal CMOS technology designed for high performance and high reliability. This performanace enhanced device features both bipolar speed and bipolar output drive capabilities while maintaining exceptional microinstruction speeds at greatly reduced CMOS power levels.

16-BIT MICROPROCESSOR
MK68000

Advances in semiconductor technology have provided the capability to place on a single silicon chip a microprocessor at least an order of magnitude higher in performance and circuit complexity than has been previously available. The MK68000 is the first of a family of such VLSI microprocessors from Mostek. It combines state-of-the-art technology and advanced circuit design techniques with computer sciences to achieve an architecturally advanced 16-bit microprocessor.

The resources available to the MK68000 user consist of the following:

- 17 32-Bit Data and Address Registers
- 16 Megabyte Direct Addressing Range
- 56 Powerful Instruction Types
- Operations on Five Main Data Types
- Memory Mapped I/O
- 14 Addressing Modes

16-BIT MICROPROCESSOR WITH 8-BIT DATA BUS
MK68008

FEATURES

- ☐ 17 32-bit data and address registers
- ☐ 56 basic instruction types
- ☐ Extensive exception processing
- ☐ Memory mapped I/O
- ☐ 14 addressing modes
- ☐ Complete code compatibility with the MK68000

GENERAL DESCRIPTION

The MK68008 is a member of the MK68000 family of advanced microprocessors. This device allows the design of cost effective systems using 8-bit data buses, while providing the benfits of a 32-bit microprocessor architecture. The performance of the MK68008 is greater than any 8-bit microprocessor and superior to several 16-bit microprocessors.

A system implementation based on an 8-bit data bus reduces system cost, in compairson to 16-bit systems, due to a more effective use of components, byte-wide memories, and peripherals. In addition , the non-multiplexed address and data buses eliminate the need for external demultiplexers, thus further simplifying the system.

The MK68008 has full code compatibility (source and object) with the MK68000, which allows programs to be run on either MPU, depending on performance requirements and cost objectives.

The 1 megabyte, non-segmented linear address space of the MK68008 allows large modular programs to be developed and executed efficiently. A large linear address space allows program segment sizes to be determined by the application, rather than forcing the designer to adopt an arbitrary segment size without regard to his individual requirements.

The programmer's model, as shown in Figure 3, is identical to that of the MK68000, with 17 32-bit registers, a 32-bit program counter, and a 16-bit status register. The first eight registers (D0-D7) are used as data registers for byte (8-bit), word (16-bit), and long word (32-bit) operations.

PARALLEL INTERFACE/TIMER (PI/T)
MK68230

FEATURES

- ☐ 68000 Bus Compatible
- ☐ Port Modes Include:
  - Bit I/O
  - Unidirectional 8-bit and 16-bit
  - Bidirectional 8-bit and 16-bit
- ☐ Programmable Handshaking Options
- ☐ 24-bit Programmable Timer Modes
- ☐ Five Separate Interrupt Vectors
- ☐ Separate Port and Timer Interrupt Service Requests
- ☐ Registers are Read/Write and Directly Addressable
- ☐ Registers are Addressed for MOVEP (Move Peripheral) and DMAC Compatibility

GENERAL DESCRIPTION

The MK68230 Parallel Interface/Timer (PI/T) provides versatile double-buffered parallel interfaces and an operating system oriented timer to MK68000 systems. The parallel interfaces operate in unidirectional or bidirectional modes, either 8 or 16 bits wide. In the unidirectional modes, an associated data direction register determines whether the port pins are inputs or outputs. In the bidirectional modes, the data direction registers are ignored, and the direction is determined dynamically by the state of four handshake pins. These programmable handshake pins provide an interface flexible enough for connection to a wide variety of low, medium, or high speed peripherals or other computer systems. The PI/T ports allow use of vectored or autovectored interrupts, and also provide a DMA request pin for connection to the Direct Memory Access Controller or a similar circuit. The PI/T timer contains a 24-bit wide counter and a 5-bit prescaler. The timer may be clocked by the system clock (PI/T CLK pin) or by an external clock (TIN pin), with the option of using a 5-bit prescaler. It can generate periodic interrupts, a square wave, or a single interrupt after a programmed timer period. Also, it can be used for elapsed time measurement or as a device watchdog.

68200 16-BIT SINGLE-CHIP MICROCOMPUTERS
MK68201/MK68E201/MK68211/MK68E211

FEATURES

☐ 16-bit, high performance, single-chip microcomputer

☐ 14 address and data registers
Eight 16-bit or sixteen 8-bit data registers
Six 16-bit address registers

☐ Advanced 16-bit instruction set
Bit, byte, and word operands
Nine addressing modes
Byte and word BCD arithmetic

☐ High performance (6 MHz instruction clock)
500 ns register-to-register move or add
3.5 μs 16 x 16 multiply
4.0 μs 32/16 divide

☐ Available with 0 or 4K (2K x 16) bytes of ROM

☐ 256 byte RAM (128 x 16)

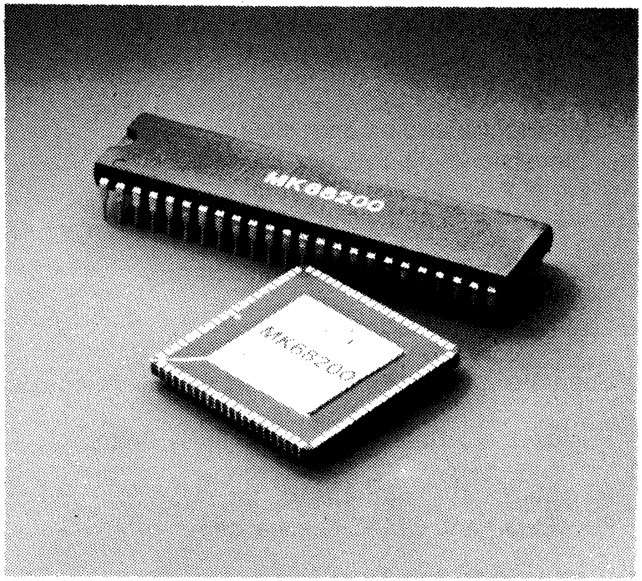
☐ Three 16-bit timers
Interval modes
Event modes
One-shot modes
Pulse and period measurement modes
Two input and two output pins

☐ Serial channel
Double-buffered receive and transmit
Asynchronous to 375 Kbps
Synchronous to 1.5 Mbps
Address wake-up recognition and generation
Internal/external baud rate generation

☐ Parallel I/O
Up to 40 pins
Direction programmable by bit
One 16-bit or two 8-bit port(s) with handshaking

☐ Interrupt controller
16 independent vectors
Eight external interrupt sources
One non-maskable interrupt
Individual interrupt masking

MK68200
Figure 1



☐ Optional external bus
16-bit, multiplexed address/data bus
Automatic bus request/grant arbitration
Two control bus versions:
68000-compatible bus (UPC)
General Purpose Bus (GP)

☐ 8 and 12 MHz time base versions produce 4 and 6 MHz instruction clock rates, respectively.
Crystal or external TTL clock

☐ Single +5 volt power supply

☐ 48-pin DIP or 84-pin LCC

GENERAL DESCRIPTION

MK68200 designates a series of new, high-performance, 16-bit, single-chip microcomputers from Mostek. Implemented in Scaled Poly-5 NMOS, they incorporate an architecture designed for superior performance in computation-intensive control applications. A modern, comprehensive instruction set, which features both high speed execution and code space efficiency, is combined on-chip along with extensive, flexible I/O capabilities. On-chip RAM and optional on-chip ROM are provided within a full 64K byte addressing space.

**THOMSON
COMPONENTS
MOSTEK**

ADVANCE INFORMATION

MEMORY MANAGEMENT UNIT
MK68451

FEATURES

☐ Compatible with MK68000 and MK68008

☐ Provides virtual memory support for the MK68010

☐ Provides efficient memory allocation

☐ Seperates address spaces of system and user resources

☐ Provides write protection

☐ Supports paging and segmentation

☐ 32 segments of variable size with each MMU

☐ Multiple MMU capability to expand to any number of segments

☐ Allows inter-task communication through shared segments

☐ Quick context switching to cut operating system overhead

☐ Simplifies programming model of address space

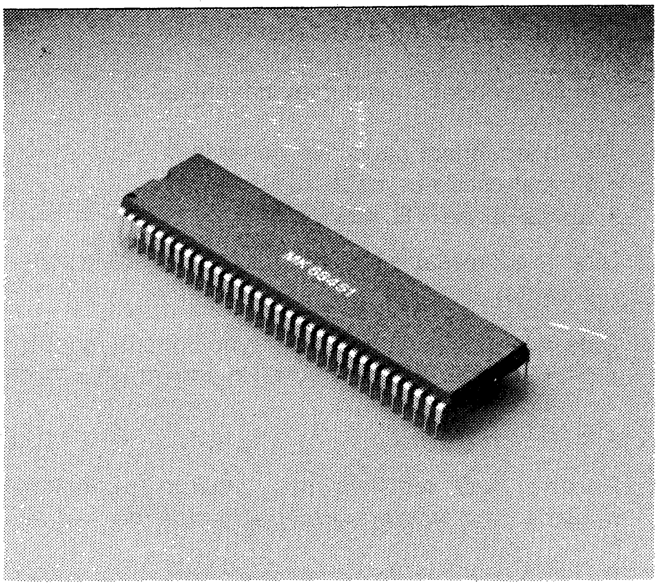
☐ Increases system reliability

☐ DMA-compatible

GENERAL DESCRIPTION

The MK68451 memory management unit (MMU) provides address translation and protection for the 16 megabyte addressing range of the MK68000 MPU. Each bus master (or processor) in the MK68000 family provides a function code and an address during each bus cycle. The function code specifies an address space, and the address specifies a location within that address space. The function codes distinguish between user and supervisor spaces and, within these, between data and program spaces. This separation of address spaces provides the basis for memory management and protection by the operating system. Provision is also made for other bus masters to have separate address spaces for logical DMA.

MK68451
Figure 1



A multitasking operating system is simplified, and reliability is enhanced, through the use of the MMU.

The MK68451 memory management unit (MMU) is the basic element of a memory management mechanism (MMM) in an MK68000 family system. The operating system is responsible for insuring the proper execution of user tasks in the system environment, and memory management is basic to this responsibility. The MMM provides the operating system with the capability to allocate, control, and protect the system memory. A block diagram of a single-MMU system is shown in Figure 3.

An MMM, implemented with one or more MK68451 MMUs, can provide address translation, separation, and write protection for the system memory. The MMM can be programmed to cause an interrupt when a chosen section of memory is accessed, and can directly translate a logical address into a physical address, making it available to the MPU for use by the operating system. Using these features, the MMM can provide separation and security for user programs and allow the operating system to manage the memory in an efficient fashion for multitasking.

- ☐ Two independent baud rate generators
  - Crystal oscillator input
  - Single-phase TTL clock input
- ☐ Directly addressable registers (all control registers are read/write)
- ☐ Data rate in synchronous or asynchronous modes
  - 0-1 M bits/second with 5.0 MHz system clock rate
- ☐ Self-test capability
- ☐ Receive data registers are quadruply buffered; transmit data registers are doubly buffered
- ☐ Daisy-chain priority interrupt logic provides automatic interrupt vectoring without external logic
- ☐ Modem status can be monitored
  - Separate modem controls for each channel
- ☐ Asynchronous features
  - 5, 6, 7, or 8 bits/character
  - 1, 1½, or 2 stop bits
  - Even, odd, or no parity
  - x1, x16, x32, and x64 clock modes
  - Break generation and detection
  - Parity, overrun, and framing error detection
- ☐ Byte synchronous features
  - Internal or external character synchronization
  - One or two sync characters in separate registers
  - Automatic sync character insertion
  - CRC-16 or CRC-CCITT block check generation and checking
- ☐ Bit synchronous features
  - Abort sequence generation and detection
  - Automatic zero insertion and deletion
  - Automatic flag insertion between messages
  - Address field recognition
  - I-field residue handling
  - Valid receive messages protected from overrun
  - CRC-CCITT block check generation and checking

PRELIMINARY

MK68901
MULTI-FUNCTION PERIPHERAL

FEATURES

- ☐ 8 Input/Output Pins
  - Individually programmable direction
  - Individual interrupt source capability
    - Programmable edge selection
- ☐ 16 Source interrupt controller
  - 8 Internal sources
  - 8 External sources
  - Individual source enable
  - Individual source masking
  - Programmable interrupt service modes
    - Polling
    - Vector generation
      - Optional In-service status
  - Daisy chaining capability
- ☐ Four timers with individually programmable prescaling
  - Two multimode timers
    - Delay mode
    - Pulse width measurement mode
    - Event counter mode
  - Two delay mode timers
  - Independent clock input
  - Time out output option
- ☐ Single channel USART
  - Full Duplex
  - Asynchronous to 62.5 kbps
  - Byte synchronous to 1 Mbps
  - Internal/external baud rate generation
  - DMA handshake signals

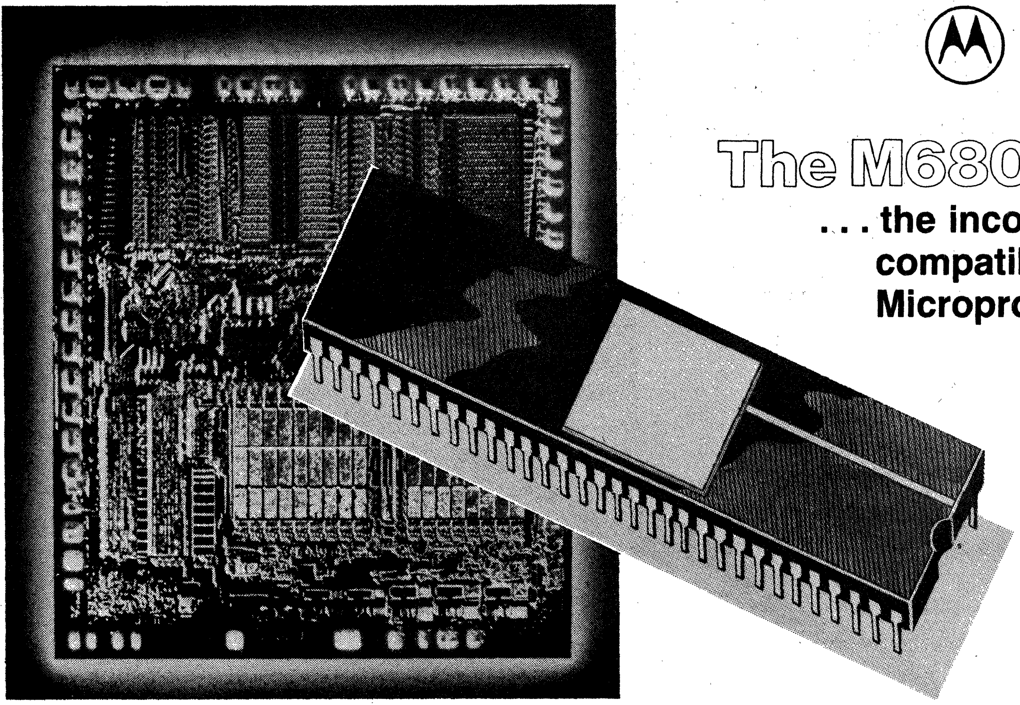
MOTOROLA



The M68000 Family

. . . the incomparable upward compatible 8/16/32-Bit Microprocessor Family

To designers of the most advanced microcomputer systems, the 16-bit MC68000 (the first member of the M68000 family) needs no introduction. It has received international recognition for its superior capabilities.

For example:

In multiprocessing systems, where resource allocation and system lock-up can present complicated design problems, the MC68000 is the solution;

For bus arbitration problems in large systems, its asynchronous interface to the system lets the MC68000 provide the answer;

For reducing high-level development efforts, its powerful instruction set allows automatic execution of oft-repeated program sequences;

In real-time applications, vectored interrupts, seven priority levels, and a 16-megabyte addressing range give the MC68000 far more flexibility than competitive chips.

Already many of the world's most respected manufacturers have joined Motorola in sourcing M68000 chips and related M68000-based board-and box-level products. A number of these are lending their design facilities to expanding the development rate of VLSI peripheral chips to support the M68000 family, thereby speeding up the progress toward mainframe performance in a desktop package.

To complement the Family's most stringent capabilities, Motorola developed VERSAdos — a realtime, multi-user, multi-tasking operating system that fully exploits the unique performance features of the hardware design. But it was soon apparent to the industry that its 32-bit architecture, its large linear address space and its regular orthogonal instruction set made the M68000 MPUs ideal for UNIX — an AT&T-developed Operating System that spawned a warehouse full of target programs for the VAX minicomputer and other powerful machines. Thus, it's not surprising that Motorola is the first MPU manufacturer, under license to AT&T, to market System V/68 — a system that brings the world of UNIX-associated target programs into the M68000 fold.

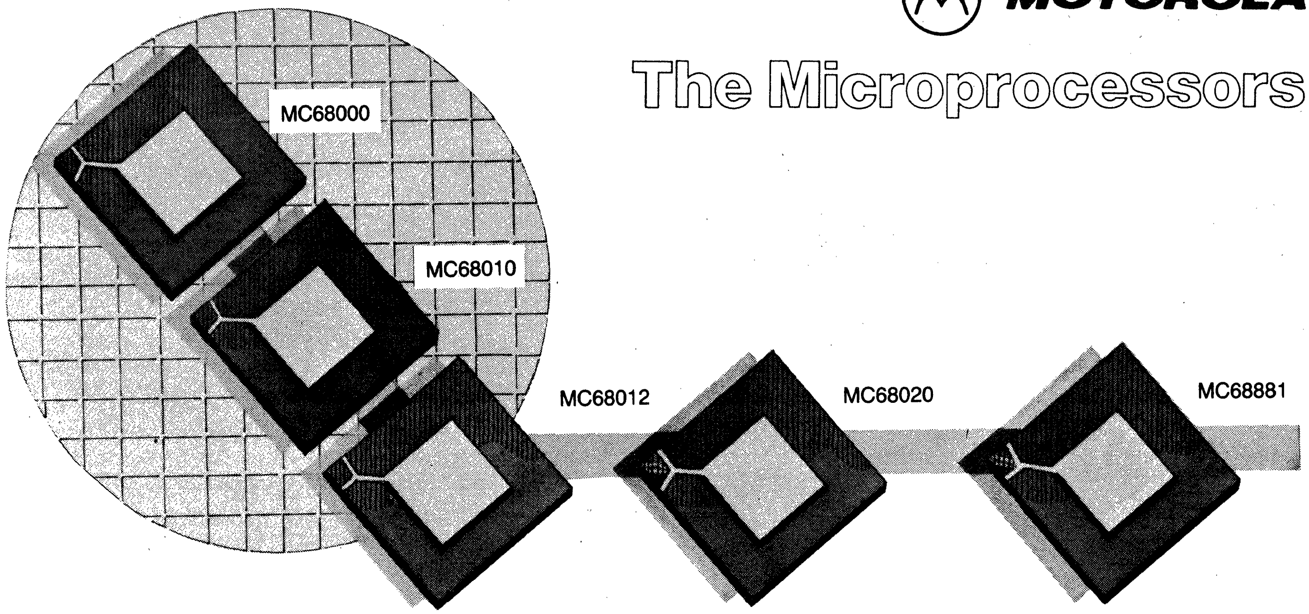
And what was done for UNIX was more recently extended to CP/M and Concurrent DOS, making these two popular operating systems compatible with the '68000 Family. Thus, existing programs for all these major operating systems are transportable, interchangeably, to '68000-based systems, and 3rd-party software vendors have the freedom to tailor their future offerings for the '68000 in the software format most suitable for their unique applications.

And complementing all the above attributes is a common instruction set for a chip family encompassing 8-bit, 16-bit and 32-bit capability . . . the most powerful system design flexibility for complex systems . . . easy transition from the simplest application to the most advanced.

These are just a few of the many unique features that give the M68000 Family state-of-the-art performance now, and assurance against obsolescence in the future.

MOTOROLA

The Microprocessors



The Compatible Processors

The MC68000 — The first of the Motorola VLSI family of microprocessors, the 16-bit MC68000 combines state-of-the-art technology, advanced circuit design and computer science to achieve the following user-significant features:

- 32-bit-Data and Address Registers
- 16 Megabyte Direct Addressing Range
- 56 Powerful Instruction Types
- Operations on Five Main Data Types
- Memory Mapped I/O
- 14 Addressing Modes

The MC68010 — An M68000 Family member with enhancements that make it ideal for virtual memory and virtual machine systems.

Its most significant enhancement is the facility for complete, controlled storing of the internal processor state upon receipt of a bus error signal during a faulty bus cycle.

Additionally, the MC68010 may be used as a virtual processor with one governing operating system handling the supervisory chores of any number of subordinate operating systems.

The MC68012 — Maintains all the features, functions, and upward compatability of the MC68008, MC68000 and MC68010 and adds seven more address lines allowing for a 2-gigabyte linear address range.

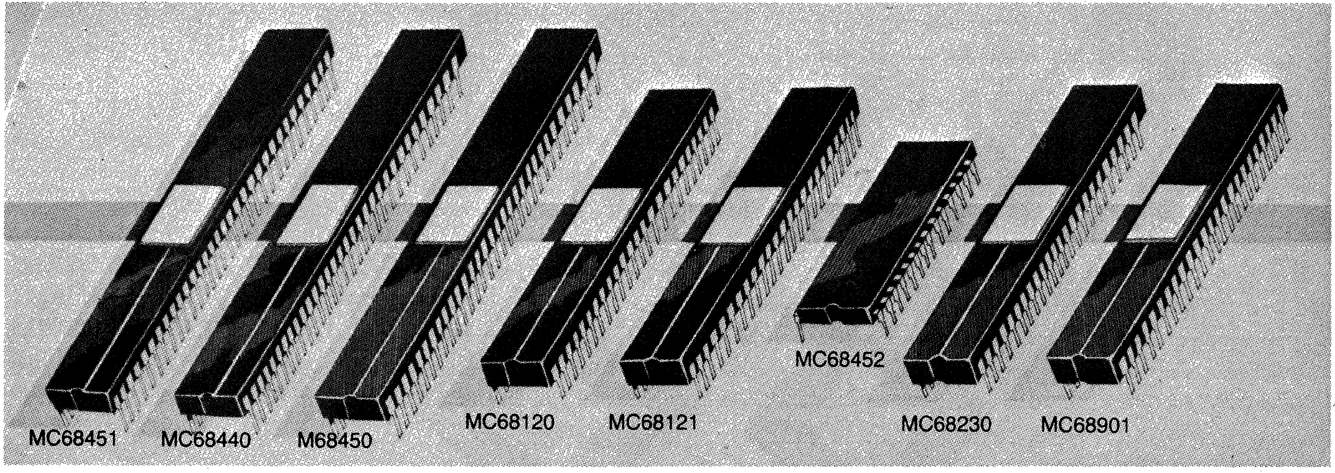
The MC68020 — The first complete 32-bit microprocessor whose processing power rivals that of today's more advanced minicomputers and even those of many mainframe machines, while maintaining software compatibility to all preceding M68000 MPUs. The MC68020 features instruction-set enhancements, co-processor operation, improved operating system support and innovative techniques to improve bus efficiency. HCMOS manufacturing techniques allow the MC68020 to provide all these features and power while dissipating less than 1.5 watts in a system.

The MC68008 For 8-Bit Applications — Allows the design of cost-effective systems using 8-bit data buses while providing the benefits of 32-bit internal architecture. Performance rivaling that of many 16-bit machines is made possible by (up to) 10 MHz processing speed and other attributes associated with the MC68000 processor. System cost, however, is significantly reduced through the use of byte-wide memories and peripherals as well as the lower cost of the less demanding architecture of the 8-bit output requirements.

The MC68881 Floating Point Coprocessor — Provides full support for IEEE specified floating point high-level math functions and for all transcendental functions. All calculations are performed to 80 bits of precision and no software "envelope" is required. The FPCP can perform either as a coprocessor to the full 32-bit MC68020 microprocessor or as a tightly coupled peripheral to the MC68000 or MC68010.

M68000 Peripherals

MOTOROLA



Memory Control Peripherals

Memory Management Unit — The basic element of memory management mechanism in an M68000 system. The MMU provides address translation and protection for the entire 16-megabyte addressing range of the MC68000. Virtual memory support is also provided for the MC68010 MPU. It provides 32 segments of variable memory size and allows for multiple MMU capabilities to expand to any number of segments. **MC68451**

Dual Direct Memory Access (DDMA) — Complements the performance capabilities of M68000 microprocessors by moving blocks of data in a quick, efficient manner with a minimum of intervention from an MPU. The DDMA performs memory-to-memory, peripheral-to-memory, and memory-to-peripheral transfers through each of two completely independent DMA channels. Either 8- or 16-bit transfers are supported. The DDMA also offers two interrupt vectors per channel. **MC68440**

Direct Memory Access Controller (DMAC) — Maintains high-performance data movement for even more complex M68000 MPU based systems. While pin-compatible with the MC68440 DDMA, the DMAC offers four completely independent DMA channels. In addition to all the features of the MC68440, the DMAC also provides very sophisticated manipulation of data through block-, array-, and linked array-chained addressing capabilities. **M68450**

I/O Peripheral Controllers

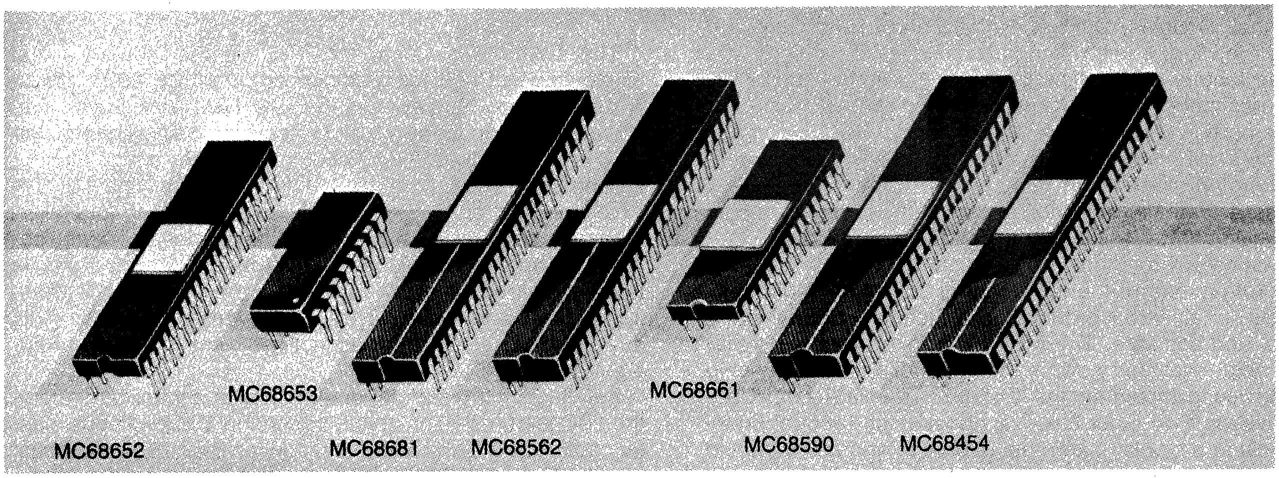
Intelligent Peripheral Controller (IPC) — A general-purpose intelligent controller that provides the interface between an M68000 or M6800 Family microprocessor and the final peripheral devices. The intelligence of this device comes from its MC6801 MPU core. System bus data is transferred via 128 bytes of on-board dual-port RAM. Multiple operating modes range from single-chip control (with 21 I/O lines and 2 control lines) to expanded mode (with 64K address space). **MC68120**

Same as above, except without ROM. **MC68121**

Bus Arbitration Module (BAM) — Arbitrates the control of an M68000 system bus when multiple bus masters are involved. Each BAM handles eight masters. **MC68452**

Parallel Interface/Timer (PI/T) — Provides versatile double-buffered parallel interfaces and a system oriented timer. The parallel interfaces operate in either a unidirectional or bidirectional mode, 8- or 16-bits wide. The timer is 24-bits with full programmability and a 5-bit prescaler. **MC68230**

Multi-Function Peripheral (MFP) — Provides basic microcomputer function requirements as a single companion chip to the M68000 Family. Features include a full function single channel universal serial asynchronous receiver/transmitter (USART) for data communications, eight source interrupt controller, eight parallel I/O lines, and four timers. **MC68901**



Data Communications

Multi-Protocol Communications Controller (MPCC) — A single-channel, serial-data communications device that recognizes byte control and bit-oriented protocols. Handles data transfers of 8- or 16-bit widths at a maximum 2.5 Mbit/sec rate. **MC68652**

Polynomial Generator Checker (PGC) — An error correction code generation and comparator circuit that complements a receiver/transmitter set in the support of character-oriented data link controls. Data transmission format may be serial (asynchronous or synchronous) or parallel. **MC68653**

Dual Universal Asynchronous Receiver/Transmitter (DUART) — Features two independent full duplex asynchronous receiver/transmitter channels. Receiver data registers are quadruple buffered and transmitter data registers are double buffered for minimum MPU intervention. Multifunction 6-bit input and 8-bit output ports, a 16-bit programmable counter/timer, interrupt capabilities, and a 1-megabyte transfer rate make the DUART an extremely powerful device for complex data communications. **MC68681**

Dual Universal Serial Communication Controller (DUSCC) — Offers two independent, multi-protocol, full duplex receiver/transmitter channels. All major data communication formats are supported, including asynchronous (5 to 8 bits plus parity), byte control, and bit-oriented protocols. Also included in the part are a 16-bit multi-function counter/timer, fully programmable bit rate generator, and a DMA interface. **MC68562**

Enhanced Peripheral Communications Interface (EPCI) — A universal synchronous/asynchronous data communications controller that interfaces to the M68000 MPU Family and most other 8- and 16-bit microprocessors. Its receiver and transmitter are double buffered for efficient full or half duplex operation. An internal baud rate clock eliminates the need for a system clock. The EPCI converts parallel data into transmit-serial data. Simultaneously, it can convert receive-serial data to parallel data characters for input to the MPU. **MC68661**

Local Area Network Controller

Local Area Network Controller for Ethernet (LANCE) — Provides complete IEEE specification (P802.3) for M68000 based systems. The LANCE can operate as a bus master or as a peripheral to the processor. A 16-megabyte DMA controller, on-board, guarantees the proper transfer of data to and from the processor. **MC68590**

Disk I/O

Intelligent Multiple Disk Controller (IMDC) — Directly interfaces to an M68000 system bus to control any combination of up to four floppy or hard disks. Both single and dual density formats are supported. A 256-byte FIFO smoothes the transfer of data to and from the disk and a 4-gigabyte on-board DMA controller guarantees proper data movement. **MC68454**

Motorola MAP Products

With up to 50% of the costs of implementing a computer integrated factory directly related to communications, it's little wonder that major manufacturers such as General Motors, McDonnell Douglas, DuPont, Kodak, and Inland Steel are driving the market for a standardized communications network for factory automation. Of the $40 billion in capital expenditures that GM has committed to modernize its factories, a large portion will be spent on promoting the rapid implementation of the Manufacturing Automation Protocol (MAP), the emerging standard in factory networking. MAP makes possible a dramatic reduction in the cost and time required to install, operate, and upgrade a factory-wide data communications environment.

Motorola is one of the few vendors that can supply MAP products in all three product areas: chips, VMEsystem™ boards, and software. The MC68824 Token Bus Controller (TBC) chip, available now, is the industry's first single-chip VLSI device to implement the IEEE 802.4 Media Access Control sublayer. Two other chips, scheduled for 1986 introduction, include a bipolar Carrierband Modem and a Broadband Interface Controller.

Motorola's VMEbus products include the MVME370 MAP Interface Controller and the MVME371 Broadband Modem. By mid-1986, Motorola will begin deliveries on the MVME372 Advanced MAP Interface Controller board, utilizing the MC68824 TBC chip and the MC68020 MPU, implementing all seven layers of the MAP protocol. And finally, in the software arena, implementation of the MAP 2.1 protocol will be available in both object and source code versions.

Motorola has been a major contributor to the MAP program since its inception. In fact, Motorola was one of the seven original participants at the MAP demonstration at the 1984 National Computer Conference where various vendors' equipment intercommunicated on a MAP network. The MAP bandwagon now carries such heavyweights as IBM, AT&T, Gould, DEC, Honeywell, and Hewlett-Packard. In addition, over 200 companies now participate in MAP User Group Meetings.

Whether you require IC's, VME boards, software, or any combination of these, Motorola can provide you the proper MAP solution.

MicroMAP

MicroMAP™ software, available in mid-1986, will represent a full implementation of the MAP 2.1 protocol. MicroMAP will come in both object and source code versions, and will be packaged with and without board-level products. To accommodate various hardware requirements, MicroMAP layers will be offered individually or in combinations, and can be downloaded into RAM or placed in ROM for higher performance, lower cost, and smaller packaging volume.

As the common thread for linking the various combinations of hardware and transmission techniques, MicroMAP provides users with the Data Link, Network, Transport, and Session Layers. In addition, MicroMAP features Common Application Service Elements; Manufacturing Message Format Standard; File Transfer, Access, and Management; and Directory Services in the Application Layer. Each layer is comprised of a set of routines that run under VRTX™, the popular real-time kernel. And finally, in the Motorola implementation of MAP software, all the sublayer standard interface routines are written in 'C,' making MicroMAP portable across virtually any hardware environment.

MC68824 Token Bus Controller (TBC)

The Token Bus Controller (TBC) is the industry's first single-chip VLSI device to implement the IEEE 802.4 Media Access Control sublayer of the ISO Data Link Layer. Designed for use in today's factory networking applications, the TBC is an intelligent HCMOS communications controller supporting serial data rates of 1, 5, and 10 Mbps. The TBC relieves the host processsor of the frame formatting and token management functions. Because the primary communications between the host and the Token Bus Controller is through shared memory structures, the interface between framed data and higher levels of software is simplified. This arrangement also provides for efficient memory management.

For efficient transfers of data frames to and from memory, the TBC features an on-chip four-channel DMA with bus master capability, a 32-bit address range, an 8- or 16-bit data bus, and a 40-byte FIFO. The TBC can also implement token bus network gateways to other local area networks by using the IBM-defined source routing option. And to simplify network maintenance, sophisticated diagnostics test functionality of both the TBC and Modem, while monitoring services support network statistics gathering.

MC68184 Broadband Interface Controller (BIC)

For implementation of most of the digital requirements for an IEEE 802.4 Broadband Physical Layer, Motorola will provide the MC68184 Broadband Interface Controller (BIC) in early 1986. The BIC is a high-speed (10 Mbps) Macrocell Array that manipulates both data and control for the RF transmitter/receiver circuitry. This device implements the standard MAC/Physical serial interface and is designed to connect to the TBC either directly, or through an arbitrary length cable. Other features include scrambling/descrambling of data, kicker insertion/deletion, error detection and correction, fifteen lines for receiver/transmitter control, and both internal and external loopback modes.

MC68194 Carrierband Modem (CBM)

To implement the IEEE 802.4 Phase Coherent Physical Layer, Motorola is developing the MC68194 Carrierband Modem (CBM) for introduction in mid-1986. The CBM is an advanced bipolar LSI device that interfaces with the Token Bus Controller to provide a cost-effective node for single-channel carrierband networks. The CBM performs two vital functions: 1) it modulates the information from the serial interface and transmits this signal onto the network cable; and 2) it receives signals from the network, demodulates the information, and passes that information to the TBC via the serial interface.

The CBM features a crystal-controlled transmit clock, a phase-locked loop (for the recovery of clocked data), and an RC-controlled Jabber Inhibit timer. This device will also contain station management logic for providing control and sense lines to activate and report on station management functions such as Reset, Jabber Inhibit, and Loopback.

Motorola MAP Products — continued

VMEmodule™ MAP Network Interface

For early MAP implementations, Motorola offers a VMEbus-compatible board set that incorporates both a MAP Interface Controller and a Broadband Modem module. Complete software is included to implement layers one through four of the MAP 2.1 Specification. The two-board set allows a complete 10 Mbps MAP network interface to be enclosed compactly within any VME card cage.

MAP Interface Controller

Utilizing gate array technology, this initial product utilizes a ROM-based real-time kernel and implements the first four layers of the MAP 2.1 standard at a 10 Mbps data rate. The upper three layers (5–7) are handled by a companion CPU board. The MVME121, MVME131, and the MVME117 CPU Single Board Computers are ideally suited for this function. This product also includes object code software implementing MAP 2.1 layers 2 through 4, which are downloadable into the MAP Network Interface from the system host.

MAP Broadband Modem

Working in conjunction with the MAP Interface Controller is the MAP Broadband Modem board. This board provides all logic and RF circuitry needed to interface to the MAP 2.1 broadband media.

MAP Network Developer's Kit

For a quick start in network implementation, Motorola offers MAP network designers the MAP Network Developer's Kit containing all the elements necessary to construct a VME-compatible prototype MAP network. Besides the broadband coax cable, taps, and a head-end remodulator, the kit contains a choice of either two or four complete 10 Mbps MAP Network Interface VME board sets.

Advanced MAP Interface Controller

For the most advanced MAP 2.1 compatible Token Bus node performance, Motorola will offer the 10 Mbps MVME372 VMEbus-compatible Advanced MAP Interface Controller. This cost-effective board combines the functionality and performance of the MC68824 TBC chip and the MC68020 32-bit microprocesssor. The TBC implements portions of the OSI/MAP 2.1 Physical Interface (layer 1) and the full Media Access Control functions of the Data Link Layer (layer 2), while the MC68020 MPU handles the remaining LLC functions of the Data Link Layer, and the remaining Layers (3–7).

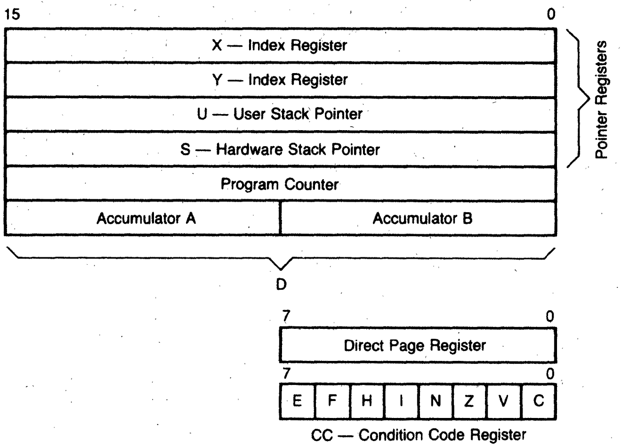
Advanced MAP Network Interface Controller

The M6800 Family

. . . the unrivaled 8-Bit Family of MPU/MCU Products



The M6809 Family
Programming Family

Family Variations:

MC6809 — Processor with on-chip clock

MC6809E — Has external clock inputs for multiprocessor operation

Both units are available with operating frequencies of 1 –, 1.5 –, and 2 MHz, and at operating temperatures of 0 to 70°C and –40 to 85°C.

Today, there is controversy about where a microcomputer turns into a "mini." While a number of benchmarks have been suggested, it is generally conceded that 16-bit processing capability constitutes a minimum "mini" requirement. From this standpoint alone, the M6809 Family at least borders on minicomputer capabilities.

The MC6809 is the latest member of the Motorola M6800 Family and is the most powerful 8-bit MPU in existence today. By permitting 16-bit internal bit manipulation, it has 50 percent more throughput than the basic MC6800. But in addition, it adds new addressing modes, utilizes an expanded instruction set with high-level language capability, and features a host of other refinements that add functional expansion to, while maintaining compatibility with, the M6800 Family. The MC6809 supports modern programming techniques such as position independence, reentrancy and modular programming.

The "E" Version has external clock inputs to allow synchronization with other MPUs and peripherals for multiprocessor operation.

General Features

- Hardware — Interfaces with All M6800 Peripherals
- Software — Upward Source Code Compatible Instruction Set and Addressing Modes

ARCHITECTURAL FEATURES

- Two 16-Bit Index Registers
- Two 16-bit Indexable Stack Pointers
- Two 8-Bit Accumulators can be Concatenated to Form One 16-Bit Accumulator
- Direct Page Register Allows Direct Addressing Throughout Memory

SOFTWARE FEATURES

- Ten 6800 Upward Compatible Addressing Modes
- Direct Addressing Anywhere in Memory
- Long Relative Branches
- Program Counter Relative
- True Indirect Addressing
- Expanded Indexed Addressing
    - 0-, 5-, 8-, or 16-Bit Constant Offsets
    - 8- or 16-Bit Accumulator Offsets
    - Auto Increment/Decrement by 1 or 2
- Improved Stack Manipulation
- 1464 Instructions
- 8 x 8 Unsigned Multiply
- 16-Bit Arithmetic
- Transfer/Exchange All Registers
- Push/Pull Any Registers

The above MPUs were the first of the M6800 MPU family and were maintained in inventory for replacement purposes. For new designs, the more powerful M6809 family is recommended.

Family Variations:

MC6800 — Basic Processor; needs external clock

MC6808 — Adds on-chip clock

MC6802NS — Adds on-chip clock and 128 x 8 bit RAM

MC6802 — Adds on-chip clock and 128 x 8 bit RAM. Has 32-byte RAM retainability through "V_{CC} Standby" function

8-Bit MPU Peripheral Chips

BIT PLANE 320 x 200 16 COLORS
PRODUCTIVITY APPLICATIONS
COMPLEX ANIMATION
TEXT UP TO 80 CHARACTERS x 50 LINES

Today's technology permits the generation of CRT-displayed graphics with all the fidelity of a first-quality color motion picture. In the past, however, this required several PC boards, densely packed with SSI/MSI circuits, making it cost-effective only for high-end, minicomputer driven equipment. Now, utilizing VLSI bipolar and MOS technologies, Motorola has introduced a 2-chip ***Raster Memory System*** *that makes high-quality graphics affordable for low- and medium-priced personal computers and workstations utilizing microprocessors with both 8-bit and 16-bit capabilities.*

In addition, Motorola still supplies a wide range of graphics/display peripherals with which to customize display systems for specific applications.

Graphics Display Peripherals

Raster Memory System — Two-chip video display generator system which, under MPU control, converts a graphics program stored in memory to the complex video stream that produces high-quality information on the CRT. This two-chip VLSI chip set, supplemented by a microprocessor, memory to store the program data, and a small number (as little as three packages) of additional SSI/MSI interface chips, form a complete system. The interface chips act as "glue" for variations in overall hardware architecture.

Display quality is controlled by the processing power of the MPU, the amount of available memory, the quality of the software and, of course, the capabilities of the video display generator. The RMS chip set operates compatibly with three of Motorola's most advanced MPUs: the MC68000, 16/32-bit processor; the MC68008 which has all the processing power of the MC68000 but is designed with 8-bit data lines; the MC6809 with its 16-bit (rather than 32-bit) internal architecture and 8-bit data bus. This compatible MPU complement allows price/performance tradeoffs consistent with end-use requirements.

The Raster Memory System supports memory capacity ranging from 16K to 1 Mbytes, offering a wide range of systems performance.

Overall, graphics quality is determined primarily by the power of the MPU and the amount of memory used — not by any limitation within the RMS System itself.

Raster Memory Control Chip — MC68487
Raster Memory Interface Chip — MC68486

CRT Controller — Provides the complex interface between a terminal and a microprocessor of the M6800 Family. It is designed to simplify the development of equipment such as intelligent terminals, word processing and information display devices. It consists of the horizontal and vertical counting circuits, a display address generator, a cursor register and comparator, and a light-pen register.

Over 16K of memory may be randomly addressed for display. The CRT may be scrolled or paged through the entire display memory. **MC6845**

Video Display Generator — Provides a means of interfacing the M6800 microprocessor family (or similar product) to a standard color or black and white NTSC television receiver.

The VDG reads data from memory and produces a video signal which allows the generation of character graphic displays. The generated video signal may be modulated to either channel 3 or 4 of a standard TV receiver by using the compatible MC1372 (below).

For Non-Interlace Systems — MC6847
For Interlace Systems — MC6847Y

Color TV Video Modulator — Companion part to the MC6847 Display Generator, provides and accepts the correct dc interconnection levels. This device may also be used as a general-purpose modulator for video signal generating devices such as video games, test equipment, video tape recorders, etc. **MC1372**

Interactive Video Display Components

Advanced Video Display Controller — A programmable device designed for use in CRT terminals and display systems. The AVDC generates the timing signals necessary for the display of interlaced or non-interlaced data. A variety of operating modes, display formats, and timing profiles can be implemented by programming the control registers in the AVDC.

A minimum CRT terminal system configuration consists of an AVDC, an MC2671 controller, an MC2670 graphics generator, an MC2675 color/monochrome attributes controller, a microprocessor such as the MC6809, a display buffer RAM, and a small number of TTL, interface circuits. **MC2674**

Programmable Keyboard and Communications Controller — Provides a versatile keyboard encoder and an independent full-duplex asynchronous communications controller. It is intended for use in microprocessor-based systems with an 8-bit data bus interface. Operates with MC2674 Controller in applications such as terminals, word-processing systems, and small business computers. **MC2671**

Display Character and Graphics Generator — This mask-programmable 11,648-bit line-select character generator contains 128 10 x 9 characters placed in a 10 x 16 matrix, and permits shifting characters that normally extend below the baseline. Character shifting, previously requiring additional external circuitry, is now accomplished internally. **MC2670**

Color/Monochrome Attributes Controller — Bipolar LSI device controls visual attributes for both color and monochrome displays. Contains a programmable dot clock divider, a high speed shift register to serialize input dot data, logic to apply visual attributes to the resulting display. The monochrome mode provides reverse video, blank, and two general purpose user definable attributes. In this mode, the display characters can be specified to appear on either a light or dark screen background. The color mode provides eight colors for foreground (character) video and eight colors for background video. Both modes provide double-width, underline, blink, dot-stretching, and dot-width attributes. **MC2675**

Programmable Video Timing Controller — Generates the vertical and horizontal timing signals necessary for the display of interlaced or non-interlaced data on a CRT monitor. It provides consecutive addressing to a user specified display buffer memory domain and controls the CPU-display buffer interface for various buffer configuration modes. A variety of operating modes, display formats, and timing profiles can be implemented. **MC2672**

Video Attributes Controller — Provides for the reverse video, blank (non-display), blink, underline, and highlight attributes and a graphics mode attribute to work in conjunction with the MC2670 display character and graphics generator (DCGG). **MC2673**

M6800 Compatible Memory

128 x 8-Bit Static RAM — Available in plastic and ceramic packages to coincide with the speed and temperature specifications of the M6800 Family. **MCM6810**

Floating Point ROM — Preprogrammed ROM designed for M6809 processor family implements entire IEEE-proposed Binary Floating Point Arithmetic, Draft 8-0 standard. Available for 1.5 and 2.0 MHz operation, at 0 to 70°C, in plastic and ceramic packages. **MC6839**

16K-Byte ROM/EEPROM Combination — 14K bytes of mask-programmed ROM, together with 2K bytes of bulk erasable EEPROM, combine nonvolatile memory with user-programmable capability in these memory chips utilizing the latest HMOS technology. **MCM6836E16**

Same as above with added 256 byte EEPROM redundancy. **MCM6836R16**

ROM-I/O-Timer — This combination chip, when used with the MC6802 MPU, yields a basic 2-chip microcomputer system featuring 2K bytes of ROM, an 8-bit bidirectional data port, and a 16-bit programmable internal timer-counter. **MC6846**

Memory Expansion and Control

Memory Management Unit — Operates in conjunction with the MC6809 MPU to expand address memory space from 64K bytes to 2 Megabytes. Each MMU can handle four different concurrent tasks with task isolation and write protection. Up to eight MMUs can be used in a system. Available in plastic, Cerdip and ceramic package. **MC6829**

Dual Port RAM Unit — Permits two microprocessors operating on two separate buses to exchange data without interfering with normal bus operation. Contains 256 bytes of dual-port RAM which acts as the medium for data interchange. HCMOS technology reduces power dissipation. Available in plastic and ceramic package. **MCM68HC34**

Direct Memory Access Controller — Performs the function of transferring data directly between memory and peripheral device controllers, thus bypassing the MPU and its associated interactive time delay. Transfers data at up to 2 Mbytes per second rate. Available in P, S and L package. **MC6844**

I/O Peripherals

Parallel/Serial . . .

Intelligent Peripheral Controller — This highly sophisticated Peripheral Controller is, in fact, a complete microcomputer chip dedicated to the control of a variety of microcomputer peripherals. On-chip circuitry includes a microprocessor that is directly compatible with the MC6801 MCU and upward compatible with the MC6800 Source and Object Code. Other chip features include a 128-byte dual-ported RAM, 2K bytes of ROM and a 16-bit, 3-function timer. 21 parallel I/O lines plus an additional five lines that can be configured for serial communications provide a high degree of systems flexibility. Multiple operating modes allow the Controller to operate on its local bus, or to communicate with an external systems bus through the internal dual-ported RAM. **MC68120**

Same as above, but without on-chip ROM. Available in ceramic 48-pin package. **MC68121**

Real Time Clock — Consists of a complete time-of-day clock with alarm, a 100 year calendar, a periodic interrupt and square wave generator, and 50 bytes of low-power static RAM. The MC146818 RTC utilizes CMOS technology which allows it to interface with processor buses while consuming very little power. This makes an ideal device for use in a battery backup environment. **MC146818**

Parallel . . .

Peripheral Interface Adapter — Contains two I/O ports, each capable of controlling an independent 8-bit peripheral data bus. Multiple PIAs can be used with a single system and selectively addressed by means of Chip-Select inputs. Each peripheral data line can be programmed to act as an input or output and each of four control/interrupt lines can operate in one of several control modes. **MC6821**

Industrial (Peripheral) Interface Adapter — Similar to above but will handle the higher (18 V rather than 7.0 V) input voltages desirable for industrial applications. **MC6822**

CMOS Parallel Interface — Contains two conventional 8-bit bidirectional I/O ports and one multiplexed 8-bit port comprising 24 independently programmable I/O lines. Interfaces directly with most industry CMOS and NMOS microprocessors for 8-bit systems. **MC146823**

Programmable Timer — Provides variable system time intervals. Has three 16-bit binary counters, three corresponding control registers and a status register. The counters are under software control and may be used to cause system interrupts and/or generate output signals. May be utilized for frequency measurements, event counting, interval measuring and similar tasks. **MC6840**

Serial . . .

0–600 bps Digital Modem — Designed to be integrated into a wide range of equipment utilizing serial data communications, including stand-alone modems, data-storage devices, remote-data communications terminals and I/O interfaces for minicomputers.

The modem provides the necessary modulation, demodulation and supervisory control functions to implement a serial data communications link, over a voice grade channel, utilizing frequency shift keying (FSK) at bit rates up to 600 bps. It is compatible with the M6800 Microcomputer Family, interfacing directly with the Asynchronous Communications Interface Adapter (below) to provide low-speed data communications capability. **MC6860**

NMOS Asynchronous Communications Interface Adapter — Provides the data formatting and control to interface serial asynchronous data communications information to bus-organized systems.

The parallel data of the bus system is serially transmitted and received by the asynchronous data interface, with proper formatting and error checking. The functional configuration of the ACIA is programmed via the data bus during system initialization. A programmable Control Register provides variable word lengths, clock division ratios, transmit control, receive control, and interrupt control. **MC6850**

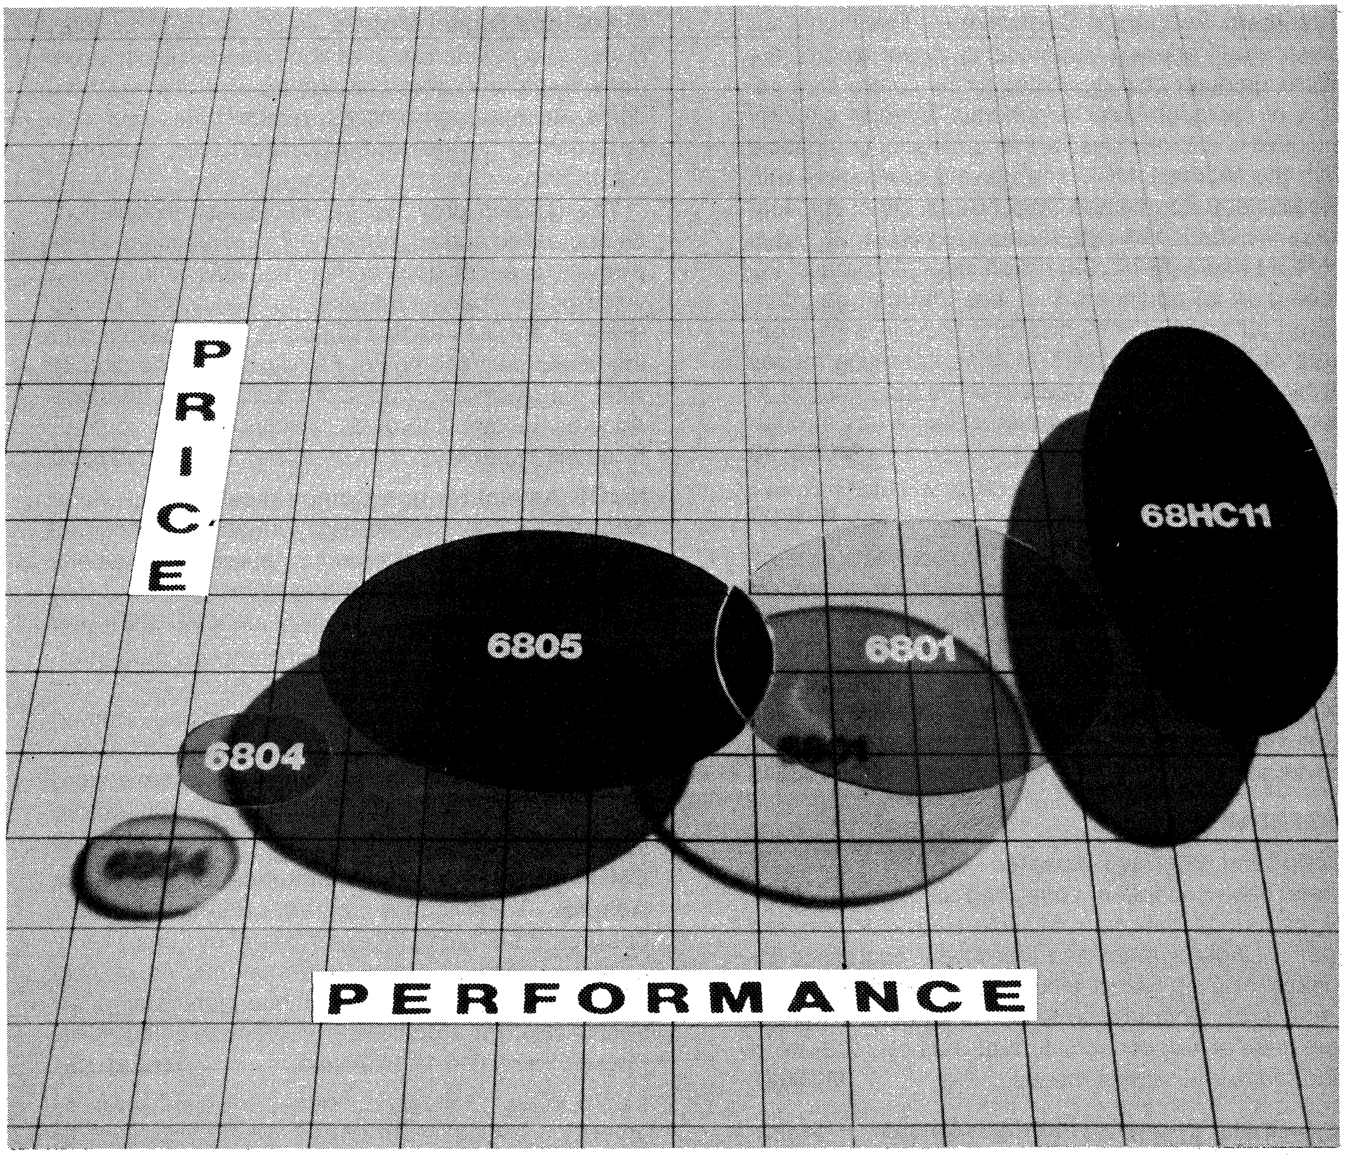
CMOS Asynchronous Communications Interface Adapter — Provides a program-controlled interface between 8-bit microprocessor-based systems, serial communication data sets, and modems. An on-chip crystal oscillator and a baud rate generator allow transmission of 15 different program-selected rates, ranging from 50 to 19,200 baud. **MC68HC51**

Same as above, but with special "MOTEL" circuit that permits the device to be used with many different Motorola and Intel MPUs without external conversion. **MC68HC53**

Advanced Data Link Controller — In a bit-oriented data communication system the data is transmitted and received in a synchronous serial form.

The serial data stream must be converted into parallel, analyzed, and stored (for use by the MPU) in order for data link management to be accomplished. Similarly, parallel data from the MPU system must be serialized with the appropriate frame control information in order to conform to the bit-oriented protocol standards. The ADLC provides these functions. **MC6854**

Synchronous Serial Data Adapter — An interface between the M6800 MPU system and synchronous data terminals such as floppy disk equipment, cassette or cartridge tape controllers, numerical control systems and other systems requiring movement of data blocks. Operates up to 600 kbps. **MC6852**



Take a basic MPU, add an on-chip clock oscillator and timer, put in enough Read-Only Memory (ROM) to handle the program routines for a dedicated application, and enough Read/Write (RAM) Memory capacity to handle the associated data manipulations; cap it off with sufficient input/output capability to interface with a number of parallel and serial oriented peripherals and you have a single-chip microcomputer (MCU). The single-chip system doesn't necessarily have all the flexibility of a multi-chip system but, with adequate capacity to handle a specific task, it can reduce component cost, equipment manufacturing cost, and space requirements.

As shown above, Motorola offers four distinct MCU families, each filling a niche in the price/performance ranges demanded by the vast variety of applications in today's marketplace. Evaluation and "selection" places a significant responsibility on the systems designer, but results in maximizing the cost-effectiveness of the ultimate system.

"Technology" is perhaps the first order of selection. The choice is between HMOS (high-density NMOS) and CMOS/HCMOS processors with corresponding typical power consumption of 350–650 mW and 8–30 mW, respectively. Next is the performance category which depends on the CPU "core" capability of the particular MCU family. Finally, within each family, there is the selection of on-chip peripheral functions that most closely fit the requirements of the eventual system.

Features

All Family Members

- Enhanced MC6800 Instruction Set
- 8 x 8 Multiply Instruction
- Serial Communications Interface
- Bus and Code Compatibility with M6800 Family
- 16-Bit, Multi-Function Programmable Timer
- Three Fundamental Operating Modes
- HCMOS and H(N)MOS Family Members
- Internal Clock Generator with Divide-By-Four Output
- Expansion Bus for add-on Peripheral Chips

Selected Family Members

- EPROM Versions
- EEPROM Additive
- Security (option on special order)
- 8-Channel A/D
- Standby RAM Function
- Variable I/O Selectivity
- Variable RAM Capacity Options
- Variable ROM Capacity Options

The M6801 MCU Family is one of the most powerful and most versatile on the market today. Its basic M6800 core has been expanded with 11 new instructions that add significant performance improvement without compromising compatibility with other M6800 MPU and peripheral family members. Among the more significant additions to the instruction set is one which concatenates the two 8-bit accumulators into a single, double-byte accumulator, thus permitting 16-bit internal processing with a substantial improvement in throughput.

Three fundamental operating modes permit the M6801 to operate as a completely self-contained unit (single-chip mode), or in an expanded multiplexed and expanded nonmultiplexed mode. The expanded modes permit the MCU to utilize externally added memory (up to 64K bytes) and I/O capability — a feature that is unique among MCUs.

On-chip peripheral capabilities include a full duplex Serial Communications Interface with a variety of baud rates, a 16-bit free-running timer and a selection of memory options to meet a variety of needs. And various Family members offer a mix of other functions that yield cost-effective optimization for specific requirements.

M6801 Family Options

	HCMOS	HMOS

*Saved during standby
**Computer Operates Properly System
†MC6803E is identical except it requires external clock

At the top of the '6801 Family is the recently introduced MC68HC11 HCMOS member. Utilizing new design techniques, it matches the highest (2.1 MHz) nominal bus rate of its fastest NMOS counterpart. On-chip memory includes RAM and ROM as well as 512 bytes of conveniently erasable EEPROM. Additional highly sophisticated on-chip peripheral functions include A-D conversion, serial communications and serial peripheral interface subsystems and the largest array of I/O lines in the Family.

All other Family members use high-density NMOS (HMOS) processing, providing a high degree of chip complexity with relatively small (low-cost) dimensions. On the low end of the scale are the MC6803 members intended for use with external ROM/EPROM; therefore, the ROM (or equivalent) is omitted from the chip with a resultant saving in cost. Other options (the 68701 series) include the substitution of EPROM for the more conventional factory-programmed ROM, thereby offering user-programmability.

MC6805P2 HMOS MICROCOMPUTER BLOCK DIAGRAM

Basic Hardware Features
- 8-Bit Architecture
- Common M6800-type CPU "Core"
- Single Power Supply Operation
- On-Chip Oscillator (for Crystal or RC)
- Individually Programmable I/O Lines
- Programmable Timers
- Maskable Interrupts
- All Registers Restored After Interrupt
- Nested Subroutines
- Self-Check Mode on ROM-based MCUs
- Self-programming Bootstrap on EPROM MCUs

Common Software Features
- Control Optimized M6800-compatible Instruction Set
- 10 Powerful Addressing Modes
- Single Instruction Bit Manipulation
- Versatile Interrupt Handling
- Conditional Branches
- Indexed Addressing for Tables
- Memory Usable as Register/Flags

User Selectable Options (See Accompanying Table)
- Choice of Low-Cost HMOS or Low-Power CMOS
- Choice of RAM Capacity
- Choice of ROM Capacity
- Choice of I/O Lines
- ROM/EPROM/EEPROM Versions
- On-Chip Security Option
- A-D or PLL Inputs on Some Types
- Serial Communications Protocols
- Zero Crossing Detection

The M6805 Family was the first 8-bit family to offer the choice of HMOS and CMOS processing — HMOS for high speed and low cost, CMOS for low power consumption, and the latest HCMOS (high-speed CMOS) technology which combines some of the best features of both. It currently offers the widest variety of on-chip memory and I/O selections to provide the user with a system that approximates his "ideal" requirements. This wide selection of functional options, in standard, off-the-shelf components, adds the benefit of low cost to highly complex circuits that closely rival the "applications-specific" advantages of custom designs.

Based on an MC6800 8-bit core, the M6805 Family retains complete software compatibility with other M6800-based families, but operates at bus speeds of up to 2.1 MHz and down to dc (CMOS members) for fully static operation. An enhanced instruction set includes bit-modify and test instructions as well as powerful indexing modes, putting the M6805 Family close to the '6801 on the performance scale.

With the M6805 Family, part numbers beginning with 1468 . . ., represent CMOS components, while the number 7 (68705) indicates the use of EPROM rather than the more conventional on-chip ROM. On-chip peripheral functions unique to certain members of the 6805 Family include phase-lock loop, oscillator synthesizer and 8-bit hardware- or software-programmable prescalers.

Technology Trade-Offs

Features	HMOS	CMOS	HCMOS
Internal Bus Speed	0.1–1.0 MHz	0–1.0 MHz	0–2.1 MHz
Instruction Set	Standard M6805	Standard M6805 plus "STOP" & "WAIT"	Standard M6805 plus "STOP," & "WAIT" & "MUL"
Operating Voltage	4.75–5.75 V	3–6 V (3–5.5 V, EPROM Parts)	3–6 V
Typical Power Consumption	350–650 mW	8–20 mW	30 mW

M6805 Family Variations

MC6804P2 BLOCK DIAGRAM

Somewhat more restrictive than the versatile M6805 Family, the new M6804 Family represents a low-cost means for upgrading earlier 4-bit processor based equipment to the more powerful world of 8-bit processing. It is ideal for dedicated high volume applications in automotive and appliance control, tools, keyboards, games, toys and other uses requiring less demanding interfaces. Internally, program controlled serial processing reduces the number of hardware implemented registers, thereby reducing chip-size and cost, at some sacrifice in processing speed. The objective of minimizing cost led to the development of a self-test scheme in the form of a ROM-driven on-chip signature analysis technique.

This attractive alternative to conventional testing utilizes polynomial division to compress lengthy output responses to much smaller results.

Though limited to only six members (at present) the family, nevertheless, includes both HMOS and HCMOS members, and allows a choice of factory-programmed ROM or field-programmable EPROM.

OUR IRS* ISN'T TAXING

*IMMEDIATE RESPONSE SYSTEM

Dear IC MASTER User:

ANNOUNCING . . . A **new,** innovative way to request and receive up-to-date IC product data.

The IC MASTER introduces an IMMEDIATE response system. Operational **24 hours a day, 7 days a week,** you can now phone in your requests for the most current IC product data available from IC manufacturers who have product data sheets in the IC MASTER, at no cost to you. Here's all you do:

Step 1 **Phone 800-443-0100** and ask for Extension #518

Step 2 When asked, simply tell the operator the name(s) of the manufacturer whose part you are interested in . . . the **specific** part number you want information on . . . if you want a data sheet and/or an application note . . . and if you want a salesperson to call.

Step 3 Provide your name, title, company, address, and phone number.

That's all you do! We do the rest. Your request will be in the hands of the company you inquired about within 24 hours.

We will follow up within a week to make sure your request was expedited and your needs were met.

It's important to us that we provide you with the best source of up-to-date IC product data available in the market . . . we've been doing it for over ten years, and we aren't stopping now.

We hope this **added new** service will contribute to a further reduction in your IC selection time.

800 CALL TOLL
443-0100 FREE
EXT. 518

NCR Microprocessors

NCR 65C02

8-bit Microprocessor, software compatible with the NMOS 6502. 2 MHz operation, 64K-byte addressable memory, low power consumption 4mA @ 1 MHz.

NCR 65C21

Peripheral Interface Adapter, with two 8-bit bidirectional I/O ports, and four peripheral control/interrupt input lines.

NCR 65C22

Versatile interface adapter with internal timer/counters. Compatible with NMOS 6522. Two powerful 16-bit programmable internal timer/counters. Latched input/output registers on both I/O parts.

NCR 65CX02

Identical to 65C02 except for the addition of four bit manipulation instructions (SMB, RMB, BBS, BBR). Will operate at 2, 3, or 4 MHz.

NCR Microcomputers

All parts have I/O capabilities of 32 bi-directional lines, are powered by a 5V power supply, and are packaged in a 40 pin DIP.

Part Number	Memory		Technology	Counter/Timer	Internal Frequency	Other Features

NCR 7300 and 7301 Color Graphics Controller

Features

- Bit Mapped Graphics and Text
- Variable M x N Character Format
- DRAM Frame Buffer to 1 Mbyte
- 8-bit or 16-bit Interface
- Block Move Commands
- Compete Frame Buffer Management
- Pixel Rates to 30 MHz
- Uses Standard Dynamic RAMs
- GSS VDI Driver
- Analog RGB outputs
- Bit Mapped Cursor
- On-chip Color Lookup Table
- Supports up to 8 bits per Pixel
- Writes all Bit Planes Simultaneously
- Frame Buffer DMA to/from System RAM
- Software Setup of Display Formats
- High Level Command Set (reduces software development costs)

Functional Description

The NCR 7300 CGC (Color Graphics Controller) and 7301 MIC (Memory Interface Controller) comprise the heart of a high performance bit mapped graphics system. Sophisticated features and functions provide reduced system software costs and a very low system parts count.

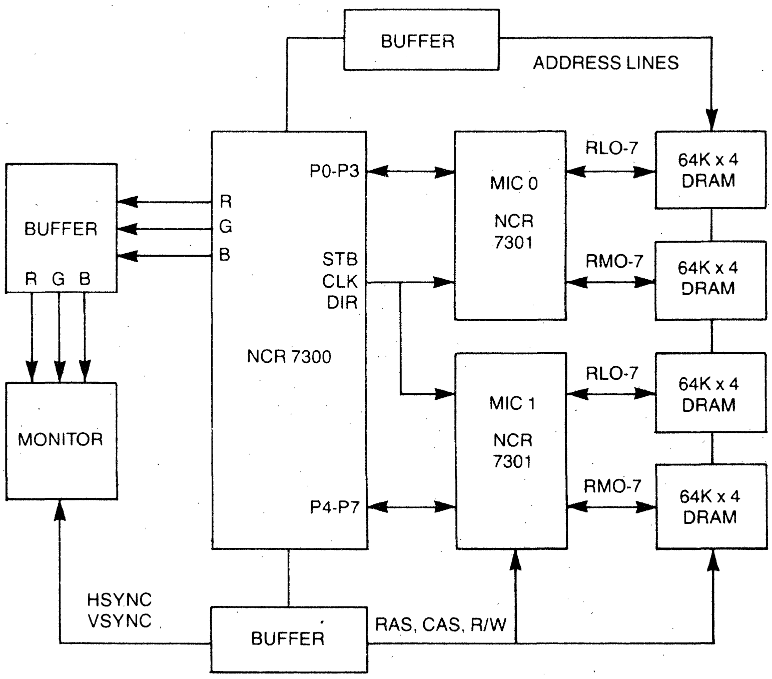
The 7300 and 7301's parallel architecture varies memory word width as the number of bit planes supported varies. Full color systems operate at the same rate as monochrome systems. This architecture provides efficient memory utilization (no memory is wasted in systems that support an odd number of bit planes) and allows the system to be easily expanded and upgraded.

A wealth of software and target applications are available to the system designer via the NCR 7300 VDI device driver. The driver is from GSS (Graphics Software Systems) and provides direct compatibility with GKS packages for IBM and AT&T compatible systems. The 7300 command set is well suited for use in standards based graphics systems.

Glue logic, other than the usual memory address line buffers, has virtually been eliminated. Functions which usually require additional external components in other systems have been incorporated in the 7300 and 7301. The 7300 includes all video shift logic, color lookup table with overlay mode, analog outputs, bit mapped cursor, and complete frame buffer management. The 7301 MIC supports raster operations, image alignment, and drawing mode functions.

The variable memory word width of the system in addition to the cache memory drawing method utilized by the 7300 results in high performance graphics and the ability to use commercially available dynamic RAMs. The cache memory drawing method uses an on-chip sequencer to perform display refresh while the 7300's drawing processor draws images to the cache memory. During display blanking intervals, the images in the cache memory are downloaded to the frame buffer. In this way images are drawn very quickly without producing flashes on the display and the cost advantages of commercial DRAMs are retained.

FUNCTIONAL BLOCK DIAGRAM



Timing and display formats (the number of lines displayed and number of pixels per line) are software defined, allowing the system to be used for a wide range of applications, the only limiting factors being the size of the frame buffer (up to 1024 x 1024 x 8) and a maximum 30 MHz video rate. The 16 color system shown at the left can produce a spectrum of formats including popular formats such as 640 x 200, 350, 400, 480; 800 x 400, 960 x 350; all non-interlaced with 60 Hz refresh. With a 1024 x 1024 frame buffer, the system can store multiple screens or produce interlaced displays such as 1000 x 700.

1800 CMOS Microprocessors and Microcomputers

The CDP1800 Series Microprocessor and Microcomputer family comprise the CDP1802A, CDP1805A, and CDP1806A microprocessors and the CDP1804A microcomputer.

The **RCA-CDP1802A CMOS microprocessor** is an 8-bit silicon-gate CMOS register-oriented central-processing unit (CPU) designed for use as a general-purpose computing or control element in a wide variety of commercial, industrial, and military applications.

The CMOS technology provides a high noise immunity to enable the CDP1802A to operate in electrically hostile environments. The CDP1802A can be powered by an unregulated power supply over a wide operating-voltage range. Further, the processor is completely static so that its system clock can be controlled to interface with slow memories or stopped to reduce power consumption during standby conditions.

The CDP1802A provides a set of simple, easy-to-use general-purpose instructions to permit the design of programs for CDP1802A-based products with minimum effort.

The **CDP1804A, CDP1805A, and CDP1806A** represent enhanced, extended versions of the CDP1802A microprocessor family. The hardware and software additions, however, still allow these devices to be upward software and hardware compatible with the CDP1802A microprocessor family.

The CDP1804A, the most complex device in the family, has 2K bytes of mask-programmable ROM, 64 bytes of RAM, an 8-bit counter-timer, 32 new instructions for enhanced data and interrupt handling, and timer-counter control. The internal ROM may be deactivated for prototyping or test and debug purposes. The CDP-1805A is a ROM-less version of the CDP1804A, useful for prototyping the CDP1804A function or for systems in which the memory size is greater than 2K bytes, or can change during the development or production cycle. For further economy, a ROM-less, RAM-less CDP1806A version is offered for larger systems that require significant RAM and/or ROM.

6805 CMOS Microprocessors and Microcomputers

The CDP6805-Series comprise the CDP6805E2 microprocessor and the CDP6805F2 and CDP6805G2 microcomputers. The central processor unit (CPU) CDP6805E2 contains the 8-bit arithmetic logic unit, accumulator, program counter, index register, stack pointer, condition code register, instruction decoder, and timing and control logic. The microcomputer versions CDP6805F2 and CDP-6805G2 contain on-chip oscillator, CPU, RAM, ROM, I/O, and timer. The on-chip RAM permits these devices to operate without external memory. The addressing modes and register-like memory operations use this RAM to the fullest extent possible.

The CDP6805 Series features parallel I/O capability, with each pin programmable as an input or as an output.

The external interrupt input, and the capability for multiple nesting of subroutines and interrupts, are features usually found on much more powerful architectures. These features permit the CDP6805-series microcomputers to be used in projects usually considered too complex for microcomputers. The external interrupt and timer/counter interrupt are vectored to different service routine addresses. This arrangement greatly simplifies interrupt programming. It also speeds execution of interrupt routines, by eliminating software interrupt polling.

The CDP6805F2 and CDP6805G2 have an on-chip timer/counter which greatly simplifies software development and extends the capability of these microcomputers. This 8-bit counter and its prescaler can be programmed for many functions. It can generate an interrupt at software-selected intervals, and can also be used as an event counter to generate an interrupt after some software selected number of external events. The timer/counter can also be used for timekeeping, measuring and generating pulses, and counting external events. The timer can also be set to "wake-up" the processor from the power-saving WAIT mode.

The first 16 address spaces of these devices are reserved for memory mapped I/O registers. The programmer of the CDP6805-Series may take full advantage of the versatile addressing modes and the register-like RAM operations of this family.

User ROM sizes range from zero, to greater than 2K for the microprocessor. A self-check ROM is available on the CDP6805F2 and CDP6805G2 as part of the device. The ROM area used in the self-check operation is not included in the published ROM sizes. The user can get the entire ROM space for his program. A small portion of the ROM is located in page zero (the direct page) to facilitate more efficient access to lookup tables using all available addressing modes. This ROM can also be used for program storage as well as lookup tables.

The CDP6805 Family includes types with either 64 or 112 bytes of on-chip RAM located in page zero.

Package size options permit as many as four, full 8-bit bidirectional I/O ports. Each pin is defined under software control as an input or output by loading a data direction register.

CMOS Random-Access Memories (RAMs)

RCA offers a full line of low power CMOS RAMs with industry standard pinouts for general-purpose use as well as for use with the CDP1800 line of microprocessors. RAM sizes range from 256 bits to 64 K bits and are designed for use in memory systems where high speed, low power, minimal data retention voltage and simplicity in use are desireable.

Features

- All the power savings and noise immunity of CMOS
- Low operating current
- Low standby currents
- Fast access times
- Data retention voltages as low as 2 volts
- CDP1800-series or industry standard pinouts

RAM Type	Organization	Supply-Voltage Range V_{SS} to V_{DD}	Operating-Temperature Range (T_A)	Electrical Characteristics at V_{DD} = 5 Volts								Sugg. Latch/De-coder	TTL Input	JEDEC Dual-In-Line Package

"Daisy Chaining" with CEI inputs and CEO outputs is used to avoid memory conflicts between ROM and RAM in a user system. In the configuration shown, the RAM is driven from the daisy chained CEO of the ROMs, the RAM is selected only if both ROMs are not addressed. For example, if ROM #1 is masked-programmed for memory locations 0000-03FF$_{16}$ and ROM #2 is masked-programmed for memory locations 0400$_{16}$-07FF$_{16}$, for addresses from 0000-07FF$_{16}$ the RAM is disabled and the ROM enabled. For locations above 07FF$_{16}$ the ROM's are disabled and the RAM enabled.

SCN2641
Asynchronous Communications Interface

Product Specification

Microprocessor Products

DESCRIPTION

The Signetics SCN2641 is a universal asynchronous data communications controller chip that interfaces directly to most 8-bit microprocessors and may be used in a polled or interrupt-driven system environment. The SCN2641 accepts programmed instructions from the microprocessor while supporting asynchronous serial data communications in full- or half-duplex mode.

The SCN2641 serializes parallel data characters received from the microprocessor for transmission. Simultaneously, it can receive serial data and convert it into parallel data characters for input to the microcomputer.

The SCN2641 contains a baud rate generator which can be programmed to either accept an external clock or to generate internal transmit or receive clocks. Sixteen different baud rates can be selected under program control when operating in the internal clock mode.

The SCN2641 is constructed using Signetics n-channel silicon gate depletion load technology and is packaged in a 24-pin DIP.

FEATURES

- **5- to 8-bit characters plus parity**
- **1, 1½ or 2 stop bits transmitted**
- **Odd, even or no parity**
- **Parity, overrun and framing error detection**
- **Line break detection and generation**
- **False start bit detection**
- **Automatic serial echo mode (echoplex)**
- **Local or remote maintenance loopback mode**
- **Baud rate:**
  - **DC to 1M bps (1X clock)**
  - **DC to 62.5K bps (16X clock)**
  - **DC to 15.625K bps (64X clock)**
- **Internal or external baud rate clock**
- **16 internal rates**
- **Double-buffered transmitter and receiver**
- **Single +5V power supply**
- **400 mil package width**

APPLICATIONS

- **Intelligent terminals**
- **Network processors**
- **Front-end processors**
- **Remote data concentrators**
- **Serial peripherals**

Signetics

SCN2651
Programmable Communications Interface (PCI)

Microprocessor Products

Product Specification

DESCRIPTION

The Signetics SCN2651 PCI is a universal synchronous/asynchronous data communications controller chip designed for microcomputer systems. It interfaces directly to the Signetics SCN2650 microprocessor and may be used in a polled or interrupt driven system environment. The SCN2651 accepts programmed instructions from the microprocessor and supports many serial data communication disciplines, synchronous and asynchronous, in the full or half-duplex mode.

The PCI serializes parallel data characters received from the microprocessor for transmission. Simultaneously, it can receive serial data and convert it into parallel data characters for input to the microcomputer.

The SCN2651 contains a baud rate generator which can be programmed to either accept an external clock or to generate internal transmit or receive clocks. Sixteen different baud rates can be selected under program control when operating in the internal clock mode.

The PCI is constructed using Signetics n-channel silicon gate depletion load technology and is packaged in a 28-pin DIP.

FEATURES

- **Synchronous operation**
  - **5- to 8-bit characters**
  - **Single or double SYN operation**
  - **Internal character synchronization**
  - **Transparent or non-transparent mode**
  - **Automatic SYN or DLE - SYN insertion**
  - **SYN or DLE stripping**
  - **Odd, even, or no parity**
  - **Local or remote maintenance loopback mode**
  - **Baud rate: dc to 1M bps (1X clock)**
- **Asynchronous operation**
  - **5- to 8-bit characters**
  - **1, 1 1/2 or 2 stop bits**
  - **Odd, even, or no parity**
  - **Parity, overrun and framing error detection**
  - **Line break detection and generation**
  - **False start bit detection**
  - **Automatic serial echo mode**
  - **Local or remote maintenance loopback mode**
  - **Baud rate: dc to 1M bps (1X clock) dc to 62.5K bps (16X clock) dc to 15.625K bps (64X clock)**

OTHER FEATURES

- **Internal or external baud rate clock**
- **16 Internal rates - 50 to 19,200 baud**
- **Double buffered transmitter and receiver**
- **Full or half duplex operation**
- **TTL compatible inputs and outputs**
- **Single 5V power supply**
- **No system clock required**
- **28-pin dual in-line package**

APPLICATIONS

- **Intelligent terminals**
- **Network processors**
- **Front-end processors**
- **Remote data concentrators**
- **Computer to computer links**
- **Serial peripherals**

Signetics

SCN2652/SCN68652
Multi-Protocol Communications Controller (MPCC)

Product Specification

Microprocessor Products

DESCRIPTION

The SCN2652/68652 Multi-Protocol Communications Controller (MPCC) is a monolithic n-channel MOS LSI circuit that formats, transmits and receives synchronous serial data while supporting bit-oriented or byte control protocols. The chip is TTL compatible, operates from a single +5V supply, and can interface to a processor with an 8 or 16-bit bidirectional data bus.

FEATURES

- DC to 1Mbps or 2Mbps data rate
- Bit-oriented protocols (BOP): SDLC, ADCCP, HDLC
- Byte-control protocols (BCP): DDCMP, BISYNC (external CRC)
- Programmable operation
  - 8 or 16-bit tri-state data bus
  - Error control - CRC or VRC or none
  - Character length - 1 to 8 bits for BOP or 5 to 8 bits for BCP
  - SYNC or secondary station address comparison for BCP-BOP
  - Idle transmission of SYNC/FLAG or MARK for BCP-BOP
- Automatic detection and generation of special BOP control sequences, i.e., FLAG, ABORT, GA
- Zero insertion and deletion for BOP
- Short character detection for last BOP data character
- SYNC generation, detection, and stripping for BCP
- Maintenance mode for self-testing
- TTL compatible
- Single +5V supply

APPLICATIONS

- Intelligent terminals
- Line controllers
- Network processors
- Front end communications
- Remote data concentrators
- Communication test equipment
- Computer to computer links

Signetics

SCN2653/SCN68653
Polynomial Generator Checker (PGC)

Product Specification

Microprocessor Products

DESCRIPTION

The Signetics SCN2653/68653 Polynomial Generator Checker (PGC) is a polynomial generator checker/character comparator circuit that complements a receiver/transmitter (R/T or USART/USRT/UART) in the support of character oriented data link controls. Table 1 defines many of the more commonly used PGC terms and abbreviations.

Parallel data characters transferred between the CPU and R/T are monitored by the PGC which performs block check character (BCC) and parity (VRC) generation/checking, single character detection, and two character sequence detection. Since the PGC operates on parallel characters, the data transmission format may be serial (synchronous or asynchronous) or parallel.

There are four modes of BCC accumulation and each mode can select one of three polynomials to compute the BCC. In the BISYNC normal and transparent modes, the PGC determines which characters are to be accumulated and which characters are to be excluded from the accumulation. The block terminating characters and the initiation and termination of BISYNC transparent text can be detected and an interrupt generated. The single interrupt output represents the inclusive OR of four maskable status conditions.

In the automatic accumulation mode, all characters are accumulated while the single accumulate mode requires a specific accumulation command for each character to be accumulated.

Character accumulation control and character comparisons are facilitated by a character class array which places each of 128 characters into one of four character classes. The four classes are normal, SYN/BISYNC not included, block terminating character (BTC)/search character (SC), and secondary search character (SSC).

FEATURES

- **Parallel Block Check Character accumulation/checking: CRC-16, CRC-12, LRC-8**
- **BISYNC normal and transparent modes**
- **Automatic or single character accumulation modes**
- **Character detection - up to 128 characters**
- **Two character sequence detection; examples: DLE-STX, ACK0, ACK1, WACK, RVI, DISC, WBT**
- **6, 7, or 8-bit characters**
- **VRC generation/checking on data bus**
- **Four maskable interrupt conditions**
- **Four classes of characters**
- **Internal power-on reset**
- **Maximum character accumulation rate of 500kHz (4Mbps)**
- **Directly compatible with Signetics SCN2651, SCN2652 and SCN2661**
- **No system clock required**
- **TTL compatible inputs and outputs**
- **Single 5V supply**
- **16-pin dual in line package**

APPLICATIONS

- **Character oriented data link control:**
  - **dedicated to one USART/USRT**
  - **multiplexed among several USART/USRTs**
- **Automated BISYNC with 2661 (minimal software intervention)**
- **BCC and VRC generation/detection on a block of memory or peripheral data**
- **Programmable character array comparator**

Microprocessor Products

SCN2661/SCN68661
Enhanced Programmable Communications Interface (EPCI)

Product Specification

DESCRIPTION

The Signetics SCN2661 EPCI is a universal synchronous/asynchronous data communications controller chip that is an enhanced version of the SCN2651. It interfaces easily to all 8-bit and 16-bit microprocessors and may be used in a polled or interrupt driven system environment. The SCN2661 accepts programmed instructions from the microprocessor while supporting many serial data communications disciplines – synchronous and asynchronous – in the full or half-duplex mode. Special support for BISYNC is provided.

The EPCI serializes parallel data characters received from the microprocessor for transmission. Simultaneously, it can receive serial data and convert it into parallel data characters for input to the microcomputer.

The SCN2661 contains a baud rate generator which can be programmed to either accept an external clock or to generate internal transmit or receive clocks. Sixteen different baud rates can be selected under program control when operating in the internal clock mode. Each version of the EPCI (A, B, C) has a different set of baud rates.

FEATURES

- **Synchronous operation**
  - **5- to 8-bit characters plus parity**
  - **Single or double SYN operation**
  - **Internal or external character synchronization**
  - **Transparent or non-transparent mode**
  - **Transparent mode DLE stuffing (Tx) and detection (Rx)**
  - **Automatic SYN or DLE-SYN insertion SYN, DLE and DLE-SYN stripping**
  - **Odd, even, or no parity**
  - **Local or remote maintenance loopback mode**
  - **Baud rate: dc to 1M bps (1X clock)**
- **Asynchronous operation**
  - **5- to 8-bit characters plus parity**
  - **1, 1½ or 2 stop bits transmitted**
  - **Odd, even, or no parity**
  - **Parity, overrun and framing error detection**
  - **Line break detection and generation**
  - **False start bit detection**
  - **Automatic serial echo mode (echoplex)**
  - **Local or remote maintenance loopback mode**
  - **Baud rate: dc to 1M bps (1X clock) dc to 62.5K bps (16X clock) dc to 15.625K bps (64X clock)**

OTHER FEATURES

- **Internal or external baud rate clock**
- **3 baud rate sets**
- **16 internal rates for each set**
- **Double buffered transmitter and receiver**
- **Dynamic character length switching**
- **Full or half-duplex operation**
- **TTL compatible inputs and outputs**
- **RxC and TxC pins are short circuit protected**
- **Single 5V power supply**
- **No system clock required**

APPLICATIONS

- **Intelligent terminals**
- **Network processors**
- **Front-end processors**
- **Remote data concentrators**
- **Computer-to-computer links**
- **Serial peripherals**
- **BISYNC adaptors**

SCN2681
Dual Asynchronous Receiver/Transmitter (DUART)

Product Specification

Microprocessor Products

DESCRIPTION

The Signetics SCN2681 Dual Universal Asynchronous Receiver/Transmitter (DUART) is a single chip MOS-LSI communications device that provides two independent full-duplex asynchronous receiver/transmitter channels in a single package. It interfaces directly with microprocessors and may be used in a polled or interrupt driven system.

The operating mode and data format of each channel can be programmed independently. Additionally, each receiver and transmitter can select its operating speed as one of eighteen fixed baud rates, a 16x clock derived from a programmable counter/timer, or an external 1x or 16x clock. The baud rate generator and counter/timer can operate directly from a crystal or from external clock inputs. The ability to independently program the operating speed of the receiver and transmitter make the DUART particularly attractive for dual-speed channel applications such as clustered terminal systems.

Each receiver is quadruply buffered to minimize the potential of receiver overrun or to reduce interrupt overhead in interrupt driven systems. In addition, a flow control capability is provided to disable a remote DUART transmitter when the buffer of the receiving device is full.

FEATURES

- **Dual full-duplex asynchronous receiver/transmitter**
- **Quadruple buffered receiver data registers**
- **Programmable data format**
  - **5 to 8 data bits plus parity**
  - **Odd, even, no parity or force parity**
  - **1, 1.5 or 2 stop bits programmable in 1/16 bit increments**
- **Programmable baud rate for each receiver and transmitter selectable from:**
  - **18 fixed rates: 50 to 38.4K baud**
  - **One user defined rate derived from programmable timer/counter**
  - **External 1x or 16x clock**
- **Parity, framing, and overrun error detection**
- **False start bit detection**
- **Line break detection and generation**
- **Programmable channel mode**
  - **Normal (full duplex)**
  - **Automatic echo**
  - **Local loopback**
  - **Remote loopback**
- **Multi-function programmable 16-bit counter/timer**
- **Multi-function 7-bit input port**
  - **Can serve as clock or control inputs**
  - **Change of state detection on four inputs**
- **Multi-function 8-bit output port**
  - **Individual bit set/reset capability**
  - **Outputs can be programmed to be status/interrupt signals**
- **Versatile interrupt system**
  - **Single interrupt output with eight maskable interrupting conditions**
  - **Output port can be configured to provide a total of up to six separate wire-OR'able interrupt outputs**
- **Maximum data transfer: 1X–1MB/sec, 16X–125KB/sec**
- **Automatic wake-up mode for multidrop applications**
- **Start-end break interrupt/status**
- **Detects break which originates in the middle of a character**
- **On-chip crystal oscillator**
- **TTL compatible**
- **Single +5V power supply**

SCC2691

Universal Asynchronous Receiver/Transmitter (UART)

Advance Information

Microprocessor Products

DESCRIPTION

The Signetics SCC2691 Universal Asynchronous Receiver/Transmitter (UART) is a single chip CMOS-LSI communications device that provides a full-duplex asynchronous receiver/transmitter in a single 24 pin DIP. It is fabricated with Signetics CMOS technology which combines the benefits of high density and low power consumption.

The operating speed of the receiver and transmitter can be selected independently as one of eighteen fixed baud rates, a 16x clock derived from a programmable counter/timer, or an external 1x or 16x clock. The baud rate generator and counter/timer can operate directly from a crystal or from external clock inputs. The ability to independently program the operating speed of the receiver and transmitter make the UART particularly attractive for dual-speed channel applications such as clustered terminal systems.

The receiver is quadruple buffered to minimize the potential of receiver overrun or to reduce interrupt overhead in interrupt driven systems. In addition, a handshaking capability is provided to disable a remote UART transmitter when the receiver buffer is full.

The UART provides a power down mode in which the oscillator is frozen but the register contents are stored. This results in reduced power consumption on the order of several magnitudes.

The UART is fully TTL compatible and operates from a single +5V power supply.

FEATURES

- **Full-duplex asynchronous receiver/transmitter**
- **Quadruple buffered receiver data register**
- **Programmable data format:**
  - **5 to 8 data bits plus parity**
  - **Odd, even, no parity or force parity**
  - **I, 1.5 or 2 stop bits programmable in 1/16 bit increments**
- **Baud rate for the receiver and transmitter selectable from:**
  - **18 fixed rates: 50 to 38.4K baud**
  - **One user defined rate derived from programmable timer/counter**
  - **External 1x or 16x clock**
- **Parity, framing, and overrun error detection**
- **False start bit detection**
- **Line break detection and generation**
- **Programmable channel mode**
  - **Normal (full-duplex)**
  - **Automatic echo**
  - **Local loopback**
  - **Remote loopback**
- **Multi-function programmable 16-bit counter/timer**
- **Single interrupt output with seven maskable interrupting conditions**
- **On-chip crystal oscillator**
- **Low power mode**
- **TTL compatible**
- **Single +5V power supply**

SCC2698
Octal Universal Asynchronous Receiver/Transmitter (Octal UART)

Product Specification (Brief)

DESCRIPTION

The Signetics SCC2698 Octal Universal Asynchronous Receiver/Transmitter (Octal-UART) is a single chip MOS-LSI communications device that provides an eight channel full-duplex asynchronous receiver/transmitter in a single package. It is fabricated with Signetics CMOS technology which combines the benefits of high density and low power consumption.

The operating speed of each receiver and transmitter can be selected independently as one of eighteen fixed baud rates, a 16x clock derived from a programmable counter/timer, or an external 1x or 16x clock. The baud rate generator and counter/timer can operate directly from a crystal or from external clock inputs. The ability to independently program the operating speed of the receiver and transmitter make the Octal-UART particularly functional for dual-speed channel applications such as clustered terminal systems.

The receiver is quadruply buffered to minimize the potential of receiver overrun, or to reduce interrupt overhead in interrupt driven systems. In addition, a handshaking capability is provided to disable a remote UART transmitter when the receiver buffer is full.

The Octal-UART provides a power down mode in which the oscillator is frozen but the register contents are stored. This results in reduced power consumption on the order of several magnitudes.

The Octal-UART is fully TTL compatible and operates from a single +5V power supply.

FEATURES

- **Eight full-duplex asynchronous receiver/transmitters**
- **Quadruple buffered receiver data register**
- **Programmable data format:**
  - **5 to 8 data bits plus parity**
  - **Odd, even, no parity or force parity**
  - **1, 1.5 or 2 stop bits programmable in 1/16 bit increments**
- **Baud rate for the receiver and transmitter selectable from:**
  - **18 fixed rates: 50 to 38.4K baud**
  - **One user defined rate derived from programmable timer/counter**
  - **External 1x or 16x clock**
- **Parity, framing, and overrun error detection**
- **False start bit detection**
- **Line break detection and generation**
- **Programmable channel mode**
  - **Normal (full duplex), automatic echo, local loop back, remote loop back**
- **Four multi-function programmable 16-bit counter/timers**
- **Single interrupt output with eight maskable interrupting conditions**
- **On-chip crystal oscillator**
- **TTL compatible**
- **Single +5V power supply with low power mode**
- **48-pin DIP and 84-pin PLCC packages**

Signetics

SCB2675T
Turbo Color/Monochrome Attributes Controller (Turbo-CMAC)

Microprocessor Products

Preliminary Specification

DESCRIPTION

HThe Signetics SCB2675T Turbo Color/Monochrome Attributes Controller (Turbo-CMAC) is a bipolar LSI device designed for CRT terminals and display systems that employ raster scan techniques. It contains a programmable dot clock divider to generate a character clock, a high speed shift register to serialize input dot data into a video stream, latches and logic to apply visual attributes to the resulting display, and logic to display a cursor on the display.

The Turbo-CMAC provides control of visual attributes on a character by character basis for two operating modes: monochrome and color. The monochrome mode provides reverse video, blank, highlight and two general purpose user definable attributes. In this mode, the display characters can be specified to appear on either a light or dark screen background. Retrace video suppression can be automatically or externally controlled. The color mode provides eight colors for foreground (character) video and eight colors for background video together with a luminance output for external color set selection or to simultaneously drive a monochrome monitor. Additionally, both modes provide double width, underline, blink, dot stretching and dot width attributes. In monochrome mode, the SCB2675T emulates the attribute characteristics of Digital Equipment Corporation's VT100 terminal.

The horizontal dot frequency is the basic timing input to the Turbo-CMAC. This clock is divided internally to provide a character clock output for system synchronization. Up to nine bits of dot data are parallel loaded into the video shift register on each character boundary. The two TTL video data outputs in monochrome mode are encoded to provide four video intensities (black, gray, white and highlight). The video data in color mode is encoded to provide eight foreground colors and shifted out on three TTL outputs, together with the luminance output.

FEATURES

- **40MHz video dot rate version**
- **Four video intensities encoded on two TTL outputs (monochrome mode)**
- **Eight foreground and background colors encoded on three TTL outputs (color mode)**
- **Internally latched character attributes:**
  - **Reverse video**
  - **Blank**
  - **Blink**
  - **Underline**
  - **Highlight**
  - **Two general purpose**
  - **Eight foreground colors**
  - **Eight background colors**
  - **Dot width control**
  - **Double width characters**
- **VT100 compatible attributes**
- **Reverse video cursor with optional white cursor in color mode**
- **Up to 10 dots per character**
- **Light or dark background in monochrome mode**
  - **Automatic retrace blanking**
- **Programmable dot stretching**
- **Compatible with SCN2674 AVDC and SCN2670 DCGG**
- **TTL compatible**
- **40-pin dual in-line package**

APPLICATIONS

- **CRT terminals**
- **Word processing systems**
- **Small business computers**

Signetics

SCN2672
Programmable Video Timing Controller (PVTC)

Product Specification

Microprocessor Products

DESCRIPTION

The Signetics SCN2672 Programmable Video Timing Controller (PVTC) is a programmable device designed for use in CRT terminals and display systems that employ raster scan techniques. The PVTC generates the vertical and horizontal timing signals necessary for the display of interlaced or non-interlaced data on a CRT monitor. It provides consecutive addressing to a user specified display buffer memory domain and controls the CPU-display buffer interface for various buffer configuration modes. A variety of operating modes, display formats, and timing profiles can be implemented by programming the control registers in the PVTC.

A minimum CRT terminal system configuration consists of a PVTC, an SCN2671 Keyboard and Communication Controller (PKCC), an SCN2670 Display Character and Graphics Generator (DCGG), an SCN2673/2677 Video and Attributes Controller (VAC), a single chip microcomputer such as the 8048, a display buffer RAM, and a small amount of TTL for miscellaneous address decoding, interface, and control. Typically, the package count for a minimum system is between 15 and 20 devices; system complexity can be enhanced by upgrading the microprocessor and expanding via the system address and data busses.

FEATURES

- **4MHz and 2.7MHz character rate versions**
- **Up to 256 characters per row**
- **1 to 16 raster lines per character row**
- **Up to 128 character rows per frame**
- **Programmable horizontal and vertical sync generators**
- **Interlaced or non-interlaced operation**
- **Up to 16K RAM addressing for multiple page operation**
- **Automatic wraparound of RAM**
- **Addressable incrementable and readable cursor**
- **Programmable cursor size, position, and blink**
- **Split screen and horizontal scroll capability**
- **Light pen register**
- **Selectable buffer interface modes**
- **Dynamic RAM refresh**
- **Completely TTL compatible**
- **Single +5 volt power supply**
- **Power on reset circuit**

APPLICATIONS

- **CRT terminals**
- **Word processing systems**
- **Small business computers**
- **Home Computers**

FUNCTIONAL DESCRIPTION

As shown on the block diagram, the PVTC contains the following major blocks:

- Data bus buffer
- Interface Logic
- Operation Control
- Timing
- Display Control
- Buffer Control

Signetics

SCB2673
Video Attributes Controller (VAC)

Product Specification

Microprocessor Products

DESCRIPTION

The Signetics 2673A and 2673B Video Attributes Controllers (VAC) are bipolar LSI devices designed for CRT terminals and display systems that employ raster scan techniques. Each contains a high speed video shift register, field and character attributes logic, attribute latch, cursor format logic and half dot shift control.

The VAC provides control of visual attributes on a field or character by character. Internal logic preserves field attribute data from character row to character row so that an attribute byte is not required at the beginning of each row. The 2673B provides for reverse video, blank (non-display), blink, underline and highlight attributes and a graphics mode attribute to work in conjunction with the Signetics 2670 Display Character and Graphics Generator (DCGG). The 2673A substitutes a light pen (strike-thru) attribute for the graphics attribute.

The horizontal dot frequency is the basic timing input to the VAC. Internally, this clock is divided down to provide a character clock output for system synchronization. Up to ten bits of video dot data are parallel loaded into the video shift register on each character boundary. The video data is shifted out on three outputs at the dot frequency. On the VIDEO output, the data is presented as a three level signal representing low, medium and high intensities. The three intensities are also encoded on two TTL compatible video outputs. Light or dark screen background can be selected.

FEATURES

- **18 and 25MHz video dot rate**
- **Three level current driven video output**
- **Three level encoded TTL video outputs**
- **Character/field attribute logic:**
  - **Reverse video**
  - **Character blank**
  - **Character blink**
  - **Underline**
  - **Highlight**
  - **Light pen strike-thru or graphics control**
- **Field attributes extend from row to row**
- **Light or dark field**
- **Cursor reverse video logic**
- **Up to 10 dots per character**
- **Composite blanking for light field retrace**
- **Optional field graphics control output**
- **High speed bipolar design**
- **TTL compatible**
- **Compatible with Signetics 2672 PVTC and 2670 DCGG**

APPLICATIONS

- **CRT terminals**
- **Word processing systems**
- **Small business computers**

Signetics

SCN2674
Advanced Video Display Controller (AVDC)

Product Specification

Microprocessor Products

DESCRIPTION

The Signetics SCN2674 Advanced Video Display Controller (AVDC) is a programmable device designed for use in CRT terminals and display systems that employ raster scan techniques. The AVDC generates the vertical and horizontal timing signals necessary for the display of interlaced or non-interlaced data on a CRT monitor. It provides consecutive addressing to a user specified display buffer memory domain and controls the CPU display buffer interface for various buffer configuration modes. A variety of operating modes, display formats, and timing profiles can be implemented by programming the control registers in the AVDC.

A minimum CRT terminal system configuration consists of an AVDC, an SCN2671 Keyboard and Communication Controller (PKCC), an SCN2670 Display Character and Graphics Generator (DCGG), an SCB2675 Color/Monochrome Attributes Controller (CMAC), a single chip microcomputer such as the 8048, a display buffer RAM, and a small amount of TTL for miscellaneous address decoding, interface, and control. Typically, the package count for a minimum system is between 15 and 20 devices; system complexity can be enhanced by upgrading the microprocessor and expanding via the system address and data busses.

FEATURES

- 2.7MHz and 4MHz character rate
- 1 to 256 characters per row
- 1 to 16 raster lines per character row
- 1 to 128 character rows per frame
- Bit mapped graphics mode
- Programmable horizontal and vertical sync generators
  - RS170 compatible sync
- Interlaced or non-interlaced operation
- Up to 64K RAM addressing for multiple page operation
- Readable, writable and incrementable cursor
  - Programmable cursor size and blink
- AC line lock
- Automatic wraparound of RAM
- Automatic split screen
- Automatic bidirectional soft scrolling
  - Programmable scan line increment
- Row table addressing mode
- Double height tops and bottoms
- Double width control output
- Selectable buffer interface modes
- Dynamic RAM refresh
- Completely TTL compatible
- Single +5 volt power supply
- Power on reset circuit

APPLICATIONS

- CRT terminals
- Word processing systems
- Small business computers
- Home computers

Signetics

SCB2675
Color/Monochrome Attributes Controller (CMAC)

Product Specification

Microprocessor Products

DESCRIPTION

The Signetics SCB2675 Color/Monochrome Attributes Controller (CMAC) is a bipolar LSI device designed for CRT terminals and display systems that employ raster scan techniques. It contains a programmable dot clock divider to generate a character clock, a high speed shift register to serialize input dot data into a video stream, latches and logic to apply visual attributes to the resulting display, and logic to display a cursor on the display.

The CMAC provides control of visual attributes on a character by character basis for two operating modes: monochrome and color. The monochrome mode provides reverse video, blank, highlight and two general purpose user definable attributes. In this mode, the display characters can be specified to appear on either a light or dark screen background. Retrace video suppression can be automatically or externally controlled. The color mode provides eight colors for foreground (character) video and eight colors for background video together with a luminance output for external color set selection or to simultaneously drive a monochrome monitor. Additionally, both modes provide double width, underline, blink, dot stretching and dot width attributes. In monochrome mode, the SCB2675 emulates the attribute characteristics of Digital Equipment Corporation's VT100 terminal.

The horizontal dot frequency is the basic timing input to the CMAC. This clock is divided internally to provide a character clock output for system synchronization. Up to nine bits of dot data are parallel loaded into the video shift register on each character boundary. The two TTL video data outputs in monochrome mode are encoded to provide four video intensities (black, gray, white and highlight). The video data in color mode is encoded to provide eight foreground colors and shifted out on three TTL outputs, together with the luminance output.

FEATURES

- **25MHz and 18MHz video dot rate versions***
- **Four video intensities encoded on two TTL outputs (monochrome mode)**
- **Eight foreground and background colors encoded on three TTL outputs (color mode)**
- **Internally latched character attributes:**
  - **Reverse video**
  - **Blank**
  - **Blink**
  - **Underline**
  - **Highlight**
  - **Two general purpose**
  - **Eight foreground colors**
  - **Eight background colors**
  - **Dot width control**
  - **Double width characters**
- **VT100 compatible attributes**
- **Reverse video cursor with optional white cursor in color mode**
- **Up to 10 dots per character**
- **Light or dark background in monochrome mode**
  - **Automatic retrace blanking**
- **Programmable dot stretching**
- **Compatible with SCN2674 AVDC and SCN2670 DCGG**
- **TTL compatible**
- **40-pin dual in-line package**

APPLICATIONS

- **CRT terminals**
- **Word processing systems**
- **Small business computers**

SCB2677
Video Attributes Controller (VAC)

Product Specification

Microprocessor Products

DESCRIPTION

The Signetics SCB2677A and SCB-2677B Video Attributes Controllers (VAC) are bipolar LSI devices designed for CRT terminals and display systems that employ raster scan techniques. Each contains a high speed video shift register, field and character attributes logic, attribute latch, cursor format logic and half dot shift control.

The VAC provides control of visual attributes on a field or character by character. Internal logic preserves field attribute data from character row to character row so that an attribute byte is not required at the beginning of each row. The SCB2677B provides for reverse video, blank (non-display), blink, underline and highlight attributes and a graphics mode attribute to work in conjunction with the Signetics SCN2670 Display Character and Graphics Generators (DCGG). The SCB2677A substitutes a strike-thru attribute for the graphics attribute.

The horizontal dot frequency is the basic timing input to the VAC. Internally, this clock is divided down to provide a character clock output for system synchronization. Up to ten bits of video dot data are parallel loaded into the video shift register on each character boundary. The video data is encoded to three levels of intensity (black, gray and white) and output on two TTL outputs. Light or dark screen background may be specified.

FEATURES

- **18MHz and 25MHz video dot rate**
- **Three level encoded TTL video outputs**
- **Character/field attribute logic**
  - **Reverse video**
  - **Character blank**
  - **Character blink**
  - **Underline**
  - **Highlight**
- **Strike-thru or graphics control**
- **Field attributes extend from row to row**
- **Light or dark field**
- **Cursor reverse video logic**
- **Up to 12 dots per character**
- **Retrace blanking for light field**
- **Optional field graphics control output**
- **High speed bipolar design**
- **TTL compatible**
- **Compatible with Signetics SCN2672 PVTC, SCN2674 AVDC and SCN2670 DCGG**
- **Upgrade of the Signetics SCB2673 VAC**

APPLICATIONS

- **CRT terminals**
- **Word processing systems**
- **Small business computers**

Signetics

SCC80 Series
CMOS Single-Chip 8-Bit Microcontroller

Preliminary Specification

Microprocessor Products

DESCRIPTION

The Signetics SCC80C Series is a family of CMOS, high-performance, single-chip microcontrollers which are functionally-compatible, low-power CMOS versions of the popular NMOS SCN80 Series. Signetics CMOS technology combines the high-speed and density characteristics of HMOS with the low-power attributes of CMOS.

All SCC80C Series devices are pin and program compatible, differing only in the size of the on-board program ROM and data RAM, as follows:

TYPE	RAM SIZE	ROM SIZE
SCC80C48	64 x 8	1K x 8
SCC80C49	128 x 8	2K x 8
SCC80C50	256 x 8	4K x 8
SCC80C35	64 x 8	–
SCC80C39	128 x 8	–
SCC80C40	256 x 8	–

The SCC80C Series devices also provide three 8-bit I/O ports, two test inputs and an interrupt input, for a total of 27 I/O lines. An on-chip, 8-bit timer/counter is provided which can count, under program control, either internal clock pulses (with a divide-by-32 prescaler) or external events. The counter can be programmed to cause an interrupt on terminal count. Systems that require extra capacity can be expanded using CMOS external memories and peripherals.

FEATURES

- **CMOS microcontroller pin compatible with Signetics SCN80 Series**
  - **80C48/80C49/80C50 with ROM**
  - **80C35/80C39/80C40 without ROM**
- **SCC80C48 Series**
  - **1 to 4K ROM**
  - **64 to 256 bytes RAM**
  - **3 x 8-bit I/O ports**
  - **Test and interrupt inputs**
  - **Timer/counter**
- **ROM and RAM expandable with external components**
- **1.36μs instruction cycle @ 11MHz**
  - **All instructions 1 or 2 cycles**
- **Three low-power consumption selections**
  - **Normal operation: 12mA @ 5V, 11MHz**
  - **Idle mode: 5mA @ 5V, 11MHz**
  - **Power down: 2μA @ 2.0V**
- **Low-power applications permit:**
  - **Battery operation**
  - **Reduced cooling requirements**
  - **Maintain operation through power line interruptions**
- **TTL compatible V_{CC} = 5V ±10% CMOS compatible V_{CC} = 5V ±20%**

CMOS Single-Chip 8-Bit Microcontroller

SCC80 Series

The CMOS design of the SCC80C Series opens new application areas that require battery operation, low power standby, wider supply voltage ranges, and the ability to maintain operation during AC power line interruptions. The use of cooling fans can be reduced or eliminated, making possible the design of less noisy or sealed equipment. These applications include mobile, portable and hand-held equipment for the automotive, telecommunications, and consumer markets.

IDLE MODE

The 80C48/80C49/80C50, when placed in the idle mode, keeps the oscillator, the internal timer and the external interrupt and counter pins functioning, and maintains the internal register and RAM status.

To place the 80C48/80C49/80C50 in idle mode, a command instruction (op code 01H) is executed. To terminate idle mode, a reset must be performed or interrupts must be enabled and an interrupt signal generated. There are two interrupt sources that can restore normal operation. One is an external signal applied to the interrupt pin. The other is from the overflow of the timer/counter. When either interrupt is invoked, the CPU is taken out of idle mode and vectors to the interrupt's service routine address. Along with the idle mode, the standard 8048 Series power-down mode is still maintained.

Signetics

SCN80 Series
Single Chip 8-Bit Microcontroller

Product Specification

Microprocessor Products

DESCRIPTION

The Signetics SCN80 Series microcontrollers are self-contained, 8-bit processors which contain the system timing, control logic, RAM data memory, ROM program memory (8048/49/50 only), and I/O lines necessary to implement dedicated control functions. All SCN80 Series devices are pin and program compatible, differing only in the size of the on-board program ROM and data RAM, as follows:

TYPE	RAM SIZE	ROM SIZE
SCN8048	64 x 8	1K x 8
SCN8049	128 x 8	2K x 8
SCN8050	256 x 8	4K x 8
SCN8035	64 x 8	—
SCN8039	128 x 8	—
SCN8040	256 x 8	—

Program memory can be expanded externally up to a maximum total of 4K bytes without paging. Data memory can also be expanded externally. I/O capabilities can be expanded using standard devices or the 8243 I/O expander.

The SCN80 Series processors are designed to be efficient control processors as well as arithmetic processors. They provide an instruction set which allows the user to directly set and reset individual lines within its I/O ports as well as test individual bits within the accumulator. A large variety of branch and table look-up instructions make these processors very efficient in implementing standard logic functions. Also, special attention has been given to code efficiency. Over 70% of the instructions are a single byte long and all others are only 2 bytes long.

An on-chip 8-bit counter is provided which can count, under program control, either internal clock pulses (with a divide by 32 prescaler) or external events. The counter can be programmed to cause an interrupt on terminal count.

FEATURES

- **8-bit CPU, ROM, RAM, I/O in a 40-pin package**
- **24 quasi bidirectional I/O lines**
- **Two test inputs**
- **Internal counter/timer**
- **Single-level vectored interrupts: external, counter/timer**
- **Over 90 instructions, 70% single byte**
- **1.36μs or 2.5μs instruction cycle, all instructions one or two cycles**
- **Expandable memory and I/O**
- **Low voltage standby**
- **TTL compatible inputs and outputs**
- **Single +5V power supply**

Signetics

SCN8031AH, SCN8051AH
Single-Chip 8-Bit Microcontroller

Product Specification

Microprocessor Products

DESCRIPTION

The Signetics SCN8031AH/8051AH is a high-performance microcontroller fabricated using Signetics' highly reliable +5V, depletion-load, N-channel, silicon-gate, N500 MOS process technology. It provides the hardware features, architectural enhancements and new instructions that are necessary to make it a powerful and cost-effective controller for applications requiring up to 64K bytes of program memory and/or up to 64K bytes of data storage.

The SCN8051AH contains a 4K x 8 read-only program memory; a 128 x 8 read/write data memory; 32 I/O lines; two 16-bit timer/counters; a five-source, two-priority-level, nested interrupt structure; a serial I/O port for either multi-processor communications, I/O expansion, or full duplex UART; and on-chip oscillator and clock circuits. The SCN8031AH is identical, except that it lacks the program memory. For systems that require extra capability, the SCN8051AH can be expanded using standard TTL compatible memories and byte oriented peripheral controllers.

The SCN8051AH microcontroller, like its SCN8048 predecessor, is efficient both as a controller and as an arithmetic processor. It has extensive facilities for binary and BCD arithmetic and excels in bit-handling capabilities. Efficient use of program memory results from an instruction set consisting of 44% one-byte, 41% two-byte, and 15% three-byte instructions. With a 12MHz crystal, 58% of the instructions execute in 1μs, 40% in 2μs and multiply and divide require only 4μs. Among the many instructions added to the standard SCN8048 instruction set are multiply, divide, subtract, and compare.

FEATURES

- **Reduced supply current**
- **4K x 8 ROM (SCN8051AH)**
- **128 x 8 RAM**
- **Four 8-bit ports, 32 I/O lines**
- **Two 16-bit timer/event counters**
- **High-performance full-duplex serial channel**
- **External memory expandable to 128K**
- **Boolean processor**
- **SCN80 series architecture enhanced with:**
  - **Non-paged jumps**
  - **Direct addressing**
  - **Four 8-register banks**
  - **Stack depth up to 128-bytes**
  - **Multiply, divide, subtract, compare**
- **Most instructions execute in 1μs**
- **4μs multiply and divide**

Signetics

SCC80C31, SCC80C51
CMOS Single-Chip 8-Bit Microcontroller

Advance Information

Microprocessor Products

DESCRIPTION

The Signetics SCC80C31/SCC80C51 is a high-performance microcontroller fabricated with Signetics' high-density CMOS technology. The CMOS 80C31/80C51 is functionally compatible with the NMOS 8031/8051 microcontroller. The Signetics CMOS technology combines the high speed and density characteristics of HMOS with the low power attributes of CMOS.

The SCC80C31/SCC80C51 contains a 4K x 8 ROM; a 128 x 8 RAM; 32 I/O lines; two 16-bit timer/counters; a five-source, two-priority level, nested interrupt structure; a serial I/O port for either multiprocessor communications, I/O expansion or full duplex UART; and on-chip oscillator and clock circuits. In addition, the 80C31/80C51 has two software selectable modes of reduced activity for further power reduction – idle and power down.

Idle mode freezes the CPU while allowing the RAM, timers, serial port, and interrupt system to continue functioning. Power-down mode saves the RAM contents but freezes the oscillator, causing all other chip functions to be inoperative.

FEATURES

- **80C31 microcontroller without ROM**
- **80C51 control-oriented microcontroller**
- **8031/8051 compatible**
  - **4K x 8 ROM**
  - **128 x 8 RAM**
  - **Two 16-bit timer/counters**
  - **Full duplex serial channel**
  - **Boolean processor**
- **Memory addressing capability**
  - **64K ROM and 64K RAM**
- **Lower power consumption:**
  - **Normal operation: 24mA @ 5V, 12MHz**
  - **Idle mode: 3mA @ 5V, 12MHz**
  - **Power-down mode: 50μA @ 2V**
- **CMOS and TTL compatible**

Microprocessor Products

DESCRIPTION

The Signetics SCC84C series of CMOS microcontrollers feature a serial interface supporting both the Inter Integrated Circuit (I^2C) protocol and the nine bit asynchronous protocol (NBAP). The I^2C protocol permits microcontrollers to be connected to each other and to their peripherals using only two wires; this is in contrast to the 16 or more wires normally required by a parallel interface between a microcontroller and its peripheral integrated circuits. The I^2C protocol is a multiple master protocol that permits communication at data rates up to 100K bits per second. A full series of peripheral integrated circuits featuring the I^2C bus are available from Signetics which includes EEPROMs, RAMs, display drivers, parallel I/O ports, power switches, tuning and various television circuits. The SCC84C series employs the industry standard 8048 instruction set and is fabricated using Signetics' high performance CMOS technology. Two power saving modes of operation are available that provide even greater power savings than normal CMOS technology. The serial bus interface permits the SCC84C series to be packaged in space saving 28-pin packages.

All SCC84 C series devices are pin and program compatible, differing only in the size of the on-board program ROM and data RAM. The SCC84C00 is a piggyback version intended for program development and features an IC socket on top to accommodate a 2732A or 2764 EPROM.

TYPE	RAM SIZE	ROM SIZE
SCC84C00	256x8	0
SCC84C20	128x8	2Kx8
SCC84C40	256x8	4Kx8

The SCC84C series also provides two 8-bit I/O ports, a 5-bit I/O port, one test and an interrupt input for a total of 23 I/O lines. An on-chip 8-bit timer/counter is provided which can count, under program control, either internal clock pulses (with a divide by 2 or 32 prescaler) or external events. The counter can be programmed to cause an interrupt on terminal count.

FEATURES

- **Inter IC (I^2C) serial bus interface**
  - **2 wire interface to peripherals**
  - **Multiple master control**
  - **Compatible with I^2C peripherals**
  - **Also supports nine bit async protocol (NBAP)**
- **SCC84C series hardware features**
  - **8048 instruction set and CPU**
  - **ROM memory to 4K bytes**
  - **RAM memory to 256 bytes**
  - **21 quasi-bidirectional I/O lines**
  - **Test and interrupt inputs**
  - **8-bit timer/counter with 5-bit prescaler**
  - **Serial bus interface I^2C/NBAP**
- **Three low power operating levels**
  - **Normal operation: 20Ma @ 5V, 12MHz**
  - **Idle mode: 6Ma @ 5V, 12MHz**
  - **Stop: 0.002Ma @ 2V**
- **TTL operation @ $V_{CC} = 5V \pm 10\%$**
- **CMOS operation @ $V_{CC} = 5V \pm 20\%$**
- **1.25μsec instruction cycle time at 12MHz; all instructions 1 or 2 cycles**
- **On chip oscillator for crystal, ceramic resonator or inductor**
- **Space saving 28-pin package**

SCN68000
16-/32-Bit Microprocessor

Product Specification

Microprocessor Products

DESCRIPTION

The SCN68000 is the first implementation of the S68000 16/32 bit microprocessor architecture. The SCN68000 has a 16-bit data bus and 24-bit address bus, while the full architecture provides for 32-bit address and data buses. It is completely code-compatible with the SCN68008 8-bit data bus implementation of the S68000 and is downward code-compatible with the SCN68010 virtual extension and the SCN68020 32-bit implementation of the architecture. Any user-mode programs written using the SCN68000 instruction set will run unchanged on the SCN68008, SCN68010, and 68020. This is possible because the user programming model is identical for all four processors and the instruction sets are proper sub-sets of the complete architecture.

The SCN68000 possesses an asynchronous bus structure with a 24-bit address bus and a 16-bit data bus.

The resources available to the SCN68000 user consist of the following:

- 17 32-bit data and address registers
- 16 megabyte direct addressing range
- 56 powerful instruction types
- Operations on five main data types
- Memory mapped I/O
- 14 addressing modes

As shown in the programming model (figure 1), the SCN68000 offers sixteen 32-bit registers and a 32-bit program counter. The first eight registers (D0 – D7) are used as data registers for byte (8-bit), word (16-bit), and long word (32-bit) operations. The second set of seven registers (A0 – A6) and the user stack pointer (USP) may be used as software stack pointers and base address registers. In addition, the registers may be used for word and long word operations. All of the 16 registers may be used as index registers.

Signetics

SCN68010
16-Bit Virtual Memory Microprocessor

Preliminary Specification

Microprocessor Products

DESCRIPTION

The SCN68010 is the third member of a family of advanced microprocessors from Signetics. Utilizing VLSI technology, the SCN68010 is a fully-implemented 16-bit microprocessor with 32-bit registers, a rich basic instruction set, and versatile addressing modes.

The SCN68010 is fully object code compatible with the earlier members of the S68000 family and has the added features of virtual memory support and enhanced instruction execution timing.

The SCN68010 possesses an asynchronous bus structure with a 24-bit address bus and a 16-bit data bus.

The resources available to the SCN68010 user consist of the following:

- 17 32-bit data and address registers
- 16-megabyte direct addressing range
- Virtual memory/machine support
- 57 powerful instruction types
- High performance looping instructions
- Operations on five main data types
- Memory mapped I/O
- 14 addressing modes

As shown in the programming model (figures 1 and 2), the SCN68010 offers 17 32-bit general purpose registers, a 32-bit program counter, a 16-bit status register, a 32-bit vector base register, and two 3-bit alternate function code registers. The first eight registers (D0 - D7) are used as data registers for byte (8-bit), word (16-bit), and long word (32-bit) operations. The second set of seven registers (A0 - A6) and the stack pointers (SSP, USP) may be used as software stack pointers and base address registers. In addition, the address registers may be used for word and long word operations. All of the 17 registers may be used as index registers.

Signetics

SCB68430
Direct Memory Access Interface (DMAI)

Preliminary Specification

Microprocessor Products

DESCRIPTION

The SCB68430 Direct Memory Access Interface (DMAI) is a single channel interface circuit which is intended to complement the performance and architectural capabilities of the SCN68000 microprocessor. The DMAI functions by transferring a series of operands (data) between memory and a device: operand sizes may be byte, word, or long word. A block is a sequence of operands: the number of operands in the block is determined by a transfer count stored within the DMAI. The SCB68430 can be programmed to utilize single cycle (cycle stealing) or burst data transfers.

The DMAI provides two interfaces. The microprocessor interface is fully compatible with the SCN68000 microprocessor. The device interface includes lines for requesting, acknowledging, controlling, and timing the data transfers. The DMAI is a single-channel subset of the other 68000 family DMA controllers (68440 and 68450). It is software compatible with these devices and provides similar interfacing signals to both the system bus and the device.

The SCB68430 is constructed using Signetics ISL bipolar technology.

FEATURES

- **Bus compatible with SCN68000 microprocessor**
- **Software compatible with other 68K family DMA controllers**
- **Single address transfers**
- **Cycle steal and burst mode operation**
- **Bus arbitration daisy chain**
- **Automatic rerun on bus error**
- **Supports 32-bit transfers for VME bus**
- **Supports SCN68000 vectored interrupts**
- **24-bit address counter**
- **16-bit transfer counter**
- **Maximum transfer rate of 5 Mbytes per second**
- **Signetics ISL bipolar technology**

SCN68454

Intelligent Multiple Disk Controller (IMDC)

Preliminary Specification

Microprocessor Products

DESCRIPTION

The SCN68454 Intelligent Multiple Disk Controller (IMDC) provides the traditional and advanced features required to control Winchester type rigid disks and floppy disks. It can control up to four rigid or floppy disk drives, in any combination. It can be used to control, with a minimum of external hardware, any drive that has an SA1000 interface standard or an ST506 Seagate interface standard.

The IMDC supports soft or hard sectored disk track format and standard IBM track formats for floppy disks (both single and double density).

The controller is programmable via an external host processor by the use of high level commands. Data transfer on the host data bus can be 8 or 16-bit in parallel. The IMDC is capable of handling a serial data rate of up to 10Mbits per second. The SCN68454 is constructed using Signetics MOS-VLSI technology.

FEATURES

- **Bus compatible with SCN68000 microprocessor**
- **Automatic rerun on bus error**
- **Supports SCN68000 vectored interrupts**
- **31-bit address counter**
- **16/8-bit data transfers**
- **Supports up to 4 rigid disks and floppy disks in any combination**
- **Supports SA1000 and ST506 Winchester interfaces**
- **Data rates up to 10Mbits per second for MFM**
- **Data rates up to 2Mbits per second for FM**
- **Handles FM and MFM data encoding/decoding**
- **On chip DMA controller and FIFO buffer (128 bytes)**
- **Multiple sector read/write with implied seek**
- **Automatic bad sector handling**
- **32 and 40-bit ECC programmable polynomials**
- **Supports computer generated ECC polynomials**

SCB68459
Disk Phase Locked Loop (DPLL)

Preliminary Specification

Microprocessor Products

DESCRIPTION

The SCB68459 Disk Phase Locked Loop (DPLL) is a bipolar device that complements the SCN68454 Intelligent Multiple Disk Controller (IMDC). Together, with an external voltage controlled oscillator (VCO), the DPLL and IMDC provide all the functions required to control up to four disks with SA800, ST500, or SA1000 type interfaces.

The DPLL uses an external VCO for the variable clock rate which tracks the read data from the disk unit. This VCO can be any device that can interface to the DPLL. The IMDC can control up to four disks; if these are all the same, only one DPLL is needed. If different disk types are driven by the same IMDC, then a DPLL is required for each disk drive type.

The SCB68459 DPLL operates by producing an oscillator frequency to match the frequency of an input signal. In this locked condition, any slight change in the input frequency (called jitter) will appear as a change in phase between the input frequency and the VCO frequency. This phase shift then acts as an error signal to change the frequency of the local DPLL VCO to match the input frequency.

The SCB68459 is constructed using Signetics extended performance logic (EPL) bipolar technology.

FEATURES

- **Supports composite data rate of 100KHz to 10MHz**
- **On chip multiplexer for read and write clock**
- **Supports MFM and FM data formats**
- **Generates synchronous clock for read data**
- **Built in pre-compensation circuit**
- **Phase detector and frequency detection for improved operation**
- **External loop gain control**
- **Minimal amount of external components required for operation**
- **Single +5 volt power supply**
- **Crystal controlled write clock**

SCN68562

Dual Universal Serial Communications Controller (DUSCC)

Microprocessor Products

Preliminary Specification

DESCRIPTION

The Signetics SCN68562 Dual Universal Serial Communications Controller (DUSCC) is a single chip MOS-LSI communications device that provides two independent, multi-protocol, full duplex receiver/transmitter channels in a single package. It supports bit oriented and character oriented (byte count and byte control) synchronous data link controls as well as asynchronous protocols. The SCN68562 interfaces to the 68000 MPU via asynchronous bus control signals and is capable of program polled, interrupt driven, block move or DMA data transfers.

The operating mode and data format of each channel can be programmed independently. Each channel consists of a receiver, a transmitter, a 16-bit multifunction counter/timer, a digital phase locked loop (DPLL), a parity/CRC generator and checker, and associated control circuits. The two channels share a common bit rate generator (BRG), operating directly from a crystal or an external clock, which provides sixteen common bit rates simultaneously. The operating rate for the receiver and transmitter of each channel can be independently selected from the BRG, the DPLL, the counter/timer, or from an external 1x or 16x clock, making the DUSCC well suited for dual speed channel applications. Data rates up to 4Mbits are supported.

The transmitter and receiver each contain a four-deep FIFO with appended transmitter command and receiver status bits and a shift register. This permits reading and writing of up to four characters at a time, minimizing the potential of receiver overrun or transmitter underrun, and reducing interrupt or DMA overhead. In addition, a flow control capability is provided to disable a remote transmitter when the FIFO of the local receiving device is full.

Signetics

SCN68681
Dual Asynchronous Receiver/ Transmitter (DUART)

Product Specification

Microprocessor Products

DESCRIPTION

The Signetics SCN68681 Dual Universal Asynchronous Receiver/Transmitter (DUART) is a single chip MOS-LSI communications device that provides two independent full-duplex asynchronous receiver/transmitter channels in a single package. It is compatible with other S68000 family devices, and can also interface easily with other microprocessors. The DUART can be used in polled or interrupt driven systems.

The operating mode and data format of each channel can be programmed independently. Additionally, each receiver and transmitter can select its operating speed as one of eighteen fixed baud rates, a 16x clock derived from a programmable counter/timer, or an external 1x or 16x clock. The baud rate generator and counter/timer can operate directly from a crystal or from external clock inputs. The ability to independently program the operating speed of the receiver and transmitter make the DUART particularly attractive for dual-speed channel applications such as clustered terminal systems.

FEATURES

- **S68000 bus compatible**
- **Dual full-duplex asynchronous receiver/transmitter**
- **Quadruple buffered receiver data registers**
- **Programmable data format**
  - **5 to 8 data bits plus parity**
  - **Odd, even, no parity or force parity**
  - **1, 1.5 or 2 stop bits programmable in 1/16 bit increments**
- **Programmable baud rate for each receiver and transmitter selectable from:**
  - **18 fixed rates: 50 to 38.4K baud**
  - **One user defined rate derived from programmable timer/ counter**
  - **External 1x or 16x clock**
- **Parity, framing, and overrun error detection**
- **False start bit detection**
- **Line break detection and generation**
- **Programmable channel mode**
  - **Normal (full duplex)**
  - **Automatic echo**
  - **Local loopback**
  - **Remote loopback**
- **Multi-function programmable 16-bit counter/timer**
- **Multi-function 6-bit input port**
  - **Can serve as clock or control inputs**
  - **Change of state detection on four inputs**
- **Multi-function 8-bit output port**
  - **Individual bit set/reset capability**
  - **Outputs can be programmed to be status/interrupt signals**
- **Versatile interrupt system**
  - **Single interrupt output with eight maskable interrupting conditions**
  - **Interrupt vector output on interrupt acknowledge**
  - **Output port can be configured to provide a total of up to six separate wire-OR'able interrupt outputs**
- **Maximum data transfer: 1X - 1MB/sec, 16X - 125KB/sec**
- **Automatic wake-up mode for multidrop applications**
- **Start-end break interrupt/status**
- **Detects break which originates in the middle of a character**
- **On-chip crystal oscillator**
- **TTL compatible**
- **Single +5V power supply**

Signetics

SCC68905
Basic Memory Access Controller (BMAC)

Advance Information

Microprocessor Products

DESCRIPTION

The Signetics SCC68905 Basic Memory Access Controller (BMAC) is designed for the S68000 family (68000, 68010 and 68012) of microprocessors. It has a 24-bit logical address and a 24-bit physical address space. The BMAC mediates all accesses between the processor and system memory by controlling the memory hierarchy, translating virtual addresses into real addresses, supporting context switches and providing protection against unauthorized memory access. The operating system allocates the system memory and the BMAC implements these functions dynamically. The BMAC also provides support for a local memory. The SCC68905 is constructed using Signetics CMOS VLSI technology.

FEATURES

- **Mediates memory reference between processor and memory**
- **Functions as a demand-driven MMU and a cache controller**
- **No wait states on cache hits**
- **MMU action occurs in parallel with cache action**
- **Little mutual bus interference with up to four processors**
- **Ensures correct data in required local memory**
- **Variable length segments with paging, variable length contiguous segments, or paged only**
- **Allows partitioning the virtual address space into one to four regions**
- **Selective flushing by regions**
- **Provides four protection types at the page or segment level**
- **Maintains four history bits**
- **Configurable cache block size of 2, 4, 8, or 16 bytes wide**
- **Configurable cache depth of 512, 1024, or 2048 blocks**
- **Configurable page size of 1k, 2k, 4k, or 8k bytes**
- **Can use sequential accesses to fill cache if available on the system**

Signetics

SCB68154
Interrupt Generator

Preliminary Specification

Microprocessor Products

DESCRIPTION

The Signetics SCB68154/8X825 Interrupt Generator provides an interface between an interrupting device and a system bus such as the VMEbus or VERSAbus™. Figure 1 shows a typical configuration of the SCB68154/8X825. The SCB68154/8X825 has three primary functions:

1. Generates bus interrupt requests.
2. Resides in the interrupt acknowledge daisy-chain.
3. Allows a status/ID byte (interrupt vector) to be supplied to the system if needed.

The SCB68154/8X825 has seven interrupt request levels, $\overline{IRQ7}$ - $\overline{IRQ1}$, which are selected by using the interrupt request register. The local master writes to the interrupt request register to generate an interrupt request on any interrupt request level. The interrupt request register may be read to determine if an interrupt has been acknowledged. If a level with an interrupt request pending is acknowledged, the SCB68154/8X825 will allow a status/ID byte to be supplied to the system. Seven bits of the status/ID byte come from the interrupt vector register with the user externally supplying the LSB. If the SCB68154/8X825 does not have an interrupt on the level acknowledged, the SCB68154/8X825 will pass the interrupt acknowledge on via the interrupt acknowledge daisy-chain output. The user can enable all interrupt request levels and clear all interrupt request levels by setting specific bits in the interrupt vector register.

The SCB68154/8X825 was designed primarily for interface to the VMEbus. For more information regarding the protocol definitions, proper use, and application of this device, refer to the VMEbus Specification Manual.

FEATURES

- **Interrupts generator for VMEbus and VERSAbus systems**
- **Generates 7 bus interrupt requests**
- **Two internal registers for system control**
- **Interrupt enable and interrupt clear bits**
- **Allows status/ID byte to be supplied during interrupt acknowledge**
- **High speed bipolar technology**
- **Single +5V supply**

Signetics

SCB68155
Interrupt Handler

Preliminary Specification

Microprocessor Products

DESCRIPTION

The Signetics SCB68155/8X824 is an asynchronous interrupt handler for VMEbus and VERSAbus™ systems. Up to 14 interrupts are prioritized by the SCB68155/8X824 to one of seven levels and are output on the interrupt priority level lines ($\overline{\text{IPL0}}$ - $\overline{\text{IPL2}}$). The SCB68155/8X824 prioritizes the interrupts in the following manner: local bus requests over system bus requests with the non-maskable interrupt ($\overline{\text{NMI}}$) considered the highest priority local interrupt ($\overline{\text{NMI}}$ over $\overline{\text{IRQ7}}$, then $\overline{\text{LRQ6}}$ - $\overline{\text{LRQ1}}$ over $\overline{\text{IRQ6}}$ - $\overline{\text{IRQ1}}$).

The local interrupt requests can be programmed to be either active high or low, and either edge or level sensitive. The system bus interrupt requests are always active low and level sensitive. The non-maskable interrupt is always negative edge triggered.

During a local interrupt acknowledge sequence, two modes of response are available: vectored mode or device-supplies-the vector mode.

For system bus responses, the SCB68155/8X824 works with a bus requester (for example, the Signetics SCB68175/8X821 Bus Master or SCB68172 VMEbus Controller), to acquire a status/ID byte (interrupt vector) from the system.

The SCB68155/8X824 was designed primarily for interface to the VMEbus. For more information regarding the protocol definitions, proper use, and application of this device, refer to the VMEbus Specification Manual.

FEATURES

- **Asynchronous interrupt handler for VMEbus and VERSAbus systems**
- **Receives and prioritizes non-maskable, six local and seven system bus interrupts**
- **Interrupts may be polled in lieu of real time operation**
- **Programmable local interrupt response**
- **Works with the SCB68175/8X821 to acquire status/ID byte (vector) during bus interrupt acknowledge**
- **Complete device status, including last interrupt acknowledged**
- **High speed bipolar technology**

Signetics

SCB68175
Bus Controller

Preliminary Specification

Microprocessor Products

DESCRIPTION

The Signetics SCB68175/8X821 Bus Controller is a high-speed bus requester and timing generator designed to interface a local master (typically, a microprocessor or DMA controller) to the VMEbus or VERSAbus™. The requester is fully asynchronous and controls all the sequencing required for acquisition and use of the bus, including both strobe and buffer timing. To permit fixed or variable length bus access, both release-when-done (RWD) and release-on-request (ROR) modes are supported by the SCB68175/8X821. In addition, an early bus-busy release increases system throughput by allowing bus arbitration to be performed concurrently with the final bus cycle of the local master. A bus error/retry circuit is also included in the SCB68175/8X821. This circuit allows the local master to rerun a cycle that was terminated by a bus error. Interface and control signals for a typical configuration are shown in Figure 1.

The SCB68175/8X821 Bus Controller is designed primarily for implementing a simple and efficient interface to the VMEbus. For more information regarding the protocol definitions, proper use, and application of this device, refer to the VMEbus Specification Manual.

FEATURES

- **Asynchronous bus controller for VMEbus and VERSAbus systems**
- **Provides transparent system interface to local master**
- **Supports both release-on-request (ROR) and release-when-done (RWD) operations**
- **Early bus-busy release for optimal bus usage**
- **Error/entry sequencing**
- **Dual port capability using 74LS764 DRAM controller**
- **High speed bipolar technology**
- **Single +5V supply**
- **24-pin slimline DIP package**

Signetics

SCC68906
Basic Memory Access Controller (BMAC)

Advance Information

Microprocessor Products

DESCRIPTION

The Signetics SCC68906 Basic Memory Access Controller (BMAC) is designed for the S68000 family (68000, 68020 and 68012) of microprocessors. It has a 24-bit logical address and a 24-bit physical address space. The BMAC mediates all accesses between the processor and system memory by controlling the memory hierarchy, translating virtual addresses into real addresses, supporting context switches and providing protection against unauthorized memory access. The operating system allocates the system memory and the BMAC implements these functions dynamically. The BMAC also provides support for a local memory. The SCC68906 is constructed using Signetics CMOS VLSI technology.

FEATURES

- **Mediates memory reference between processor and memory**
- **Functions as a demand-driven MMU and a cache controller**
- **No wait states on cache hits**
- **MMU action occurs in parallel with cache action**
- **Little mutual bus interference with up to four processors**
- **Ensures correct data in required local memory**
- **Variable length segments with paging, variable length contiguous segments, or paged only**
- **Allows partitioning the virtual address space into one to four regions**
- **Selective flushing by regions**
- **Provides four protection types at the page or segment level**
- **Maintains four history bits**
- **Configurable cache block size of 2, 4, 8, or 16 bytes wide**
- **Configurable cache depth of 512, 1024, or 2048 blocks**
- **Configurable page size of 1k, 2k, 4k, or 8k bytes**
- **Can use sequential accesses to fill cache if available on the system**

Bipolar Microprocessors 8X300 Family

PRODUCT LINE OVERVIEW

The Bipolar LSI Microprocessor product line is centered around two high-speed, Schottky-fabricated, MicroControllers and a large family of I/O devices, support ICs, and development support tools to expedite and simplify system design. No other microprocessor product line offers the advantages of the 8X300 Family in systems requiring intelligent control of high-speed data streams.

The MicroControllers themselves are capable of fetching, decoding, and executing each instruction in one machine cycle (250ns for the 8X300 and 200ns for the 8X305). A single instruction can read data from the bus, mask it, shift it, perform an ALU operation on it, rotate it, merge it, and return it to the bus. The architecture and instruction set of each processor are designed to provide high data throughput with both bit and byte oriented operations. The 8X305 offers more on-chip registers and significant data handling capability improvements over the original 8X300.

Because of its extremely high speed, the 8X300 family is able to perform through software many operations that would otherwise require additional hardware in the system. For example, using either MicroController, the 8X330 Floppy Disc Controller, and other support devices, a complete diskette drive controller can be built using only 10 Integrated Circuits. The resulting controller is programmable and capable of supporting multiple drive types and formats. Low parts counts typical of 8X300 Family designs result in reduced assembly and testing time, lower power consumption, and improved reliability.

The 8X300 Family is implemented using bipolar, Low-power Schottky technology to provide TTL speeds and drive capability without additional buffering. In addition, the family is compatible with most special-purpose devices often required in control applications. The excellent environmental characteristics of the technology make the 8X300 family ideal for military applications as well.

A complete complement of development support tools are offered to simplify design using the 8X300. A self-contained universal development system is available that supports full speed in-circuit emulation. Software tools are provided to enable use of mainframe or minicomputers to generate 8X300 software. Complete documentation is in place, including both data sheets and comprehensive reference manuals. In addition, evaluation and demonstration systems are available. To supplement these tools, Signetics employs a large, professional staff of applications engineers both in the field and at the factory to support your 8X300 design efforts.

8X300 FAMILY REFERENCE TABLE

PART NO.	PRODUCT DESCRIPTION	FUNCTION
8X300	MicroController	250ns processor for I/O and data control
8X305	MicroController	200ns processor for I/O and data control
8X310	Interrupt Controller	3 prioritzed interrupts with 4-level stack
8X320	Bus Interface Array	2-port RAM for 8/16-bit mailbox interfacing
8X330	Floppy Disk Controller	1Mb/sec data rate, programmable, supports ECC
8X350	Bipolar RAM	256 x 8 high-speed memory with bus interface
8X360	Memory Address Director	16-bit address controller for working storage
8X337	Transparent I/O Port	High-speed, 8-bit bidirectional, 3-state
8X372	Addressable I/O Port	High-speed, 8-bit bidirectional, synchronous, 3-state
8X376	Addressable I/O Port	High-speed, 8-bit bidirectional, asynchronous, 3-state
8X382	Addressable I/O Port	High-speed, 4-in/4-out, 3-state
8T31	Transparent I/O Port	8-bit bidirectional, 3-state
8T32	Addressable I/O Port	8-bit bidirectional, synchronous, 3-state
8T36	Addressable I/O Port	8-bit bidirectional, asynchronous, 3-state

NOTES
1. The shaded devices are designed to take advantage of the improved performance of the 8X305.
2. Refer to "Reference Table" on next page for a descriptive summary of each part in the 8X300 Family.
3. The actual parts used in a specific system are selected based on the application requirements.

8X360
Memory Address Director (MAD)

Product Specification

Microprocessor Products

DESCRIPTION

The 8X360 Memory Address Director (MAD) (Figure 1), is a high-speed, performance oriented peripheral. The 8X360 reduces bookkeeping and software overhead in memory intensive systems. In a system context, the 8X360 interfaces directly with the 8X305 Microcontroller. The MAD can address up to 64K of memory and provides an efficient, cost-effective solution to applications requiring large memories and high-speed data transfers.

The 8X360 must be initialized before the registers/counters can begin data transfer. The eleven registers/counters are initialized with information such as starting/ending address, byte count, address increment/decrement, etc. The registers/counters are addressable through a select instruction from the 8X305 (conventional) or by extended microcode.

FUNCTIONAL OPERATIONS

The 8X360 has 11 registers/counters of which two, the Control and Status Register and Frequency Divider, determine the mode of operation.

The 8X360 wakes up with three registers/counter; Frequency Divide, Control and Status Register and Word Counter in a defined state; all others wake up in an undefined state (see Table 3). No address is selected when the 8X360 wakes up.

Registers

The address registers appear as two 8-bit addressable registers to the 8X305 and are initialized with a starting address. The word count register (two 8-bit addressable registers) holds a 16-bit value for either the final address or the word/byte count, depending on the mode of operation. Loading the counters from these registers is non-destructive.

FEATURES

- **Automatic Memory Address Management**
- **16-Bit Address Capability**
- **11 Addressable Registers for Maximum Flexibility**
- **Directly Compatible with the 8X305 Microcontroller**
- **Bipolar ISL and Low-Power Schottky Technology**
- **Multiple Clock Modes with Programmable Frequency Divider**
- **Terminal Count End-of-Block Indicator**
- **40-Pin Dual In-Line Package**

Counters

The 16-bit address and word counters appear as two 8-bit addressable registers. The address counter counts up or down from the current address by 1 or 2, with its output available on 16 three-state output pins which are enabled through the TSCL pin. The word counter counts down from an initialized number of bytes or words, or stores the final address.

I/O Register

The I/O register stores a special 8-bit address from 0–255. In the I/O clocking mode, an address on the $\overline{IV}$ bus and the stored address are compared after the rising edge of MCLK. A match produces an internal clock which clocks the 8X360 counters.

STATUS REGISTERS

Command Status

The CSR is an 8-bit addressable register with its most significant bit (bit 0) not used. The other seven bits control the overall operations such as: the address counter step length and direction, the mode of operation, the counter load and enable functions, the loop abort and terminal count actions. (See Table 1 for a summary of this Register.)

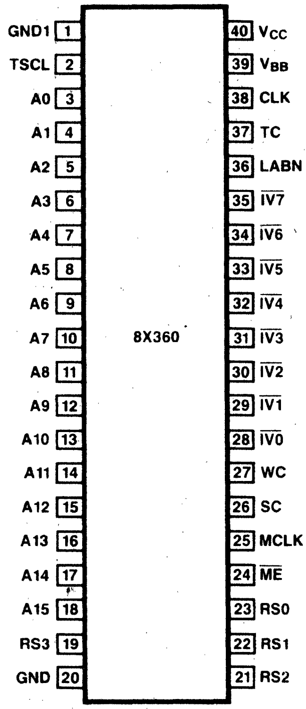
N, I PACKAGE



TOP VIEW
Order Numbers
N8X360N, N8X360I

Bits 1 and 2 (Address Counter Step Length and Direction) — Bit 1 selects a counter step length of 1 or 2 when programmed to a logic 0 or 1, respectively. Bit 2 determines the address counter direction, a logic 0 for up or a logic 1 for down.

Signetics

8X401
Microcontroller

Product Specification

Microprocessor Products

PRODUCT DESCRIPTION

The Signetics 8X401 Microcontroller is a very high-speed bipolar microprocessor implemented with internal ECL technology. The 8X401 Microcontroller combines speed, flexibility, and a bit-oriented instruction set to accommodate many sophisticated applications. It excels in systems that require high-speed bit or byte manipulations, such as high-speed controllers and data communications.

The 8X401 can fetch, execute, and generate the next instruction address for a 20-bit instruction in a minimum of 150 nanoseconds. Within one instruction cycle, the 8X401 can be programmed to input, right-rotate and mask single or multiple bit subfields, perform an ALU operation, left-rotate, merge the subfield into the destination, and output.

To interface with program memory, the 8X401 uses a 13-bit address bus and a 20-bit instruction bus. An 8-bit bidirectional data/address bus, and an I/O control and timing bus is used to access external peripheral devices.

FEATURES

- **Fetches and executes all instructions in a minimum of 150 nanoseconds**
- **Bit manipulation-oriented instruction set**
- **Separate buses for instruction, instruction address and I/O**
- **Sixteen 8-bit registers**
- **On-chip interrupt control**
- **TTL compatible I/O**
- **Single +5V supply**
- **0.9-inch 64-pin DIP, 68-pin plastic leaded chip carrier**
- **Two user-definable status flags**
- **Single TTL clock input**
- **Three independent I/O banks**
- **On-board control sequencer**
- **On-chip subroutine capabilities**
- **Fixed instruction set — 32 instructions**
- **Complete development support**

8X450
RAM

Preliminary Specification

Microprocessor Products

DESCRIPTION

The 8X450 is a 256-byte RAM designed primarily as a working storage element for 8X401 and 8X305 based systems. The 8X450 can be used as a dedicated RAM or in groups of RAMs to form a customized memory stack.

FEATURES

- **256-byte RAM**
- **Two modes of operation**
- **Paged RAM capability**
- **On-chip address latches**
- **Directly bus compatible with the 8X401 and 8X305 microcontrollers**
- **24-pin slim line package**
- **Single + 5-volt supply**

Signetics

8X470
I/O Port

Preliminary Specification

Microprocessor Products

PRODUCT DESCRIPTION

The 8X470 I/O Port (Figure 1) is a fuse-programmable device designed to interface a user system with a Signetics 8X401 Microcontroller. The 8X470 has three internal registers — a data register and two status registers. The data register is shared between the two systems, while each system has its own dedicated status register. The 8X470 can be programmed to provide a bidirectional or unidirectional user interface with the user data entry being either synchronous or asynchronous with the 8X401.

FEATURES

- **Two independent 8-bit busses**
- **Fast polling**
- **Directly bus-compatible with the 8X401, 8X305 Microcontrollers**
- **256 Data Addresses**
- **Separate Controller and User status registers**
- **16 Status Addresses**
- **Positionable Controller Status Register output**
- **Bidirectional or unidirectional I/O capability**
- **Synchronous or asynchronous user data entry**
- **Conventional $\overline{DA}$ or Fast select addressing techniques**
- **24-pin slimline package**
- **Single +5 volt supply**

SCB68172
VMEbus Controller (BUSCON)

Advance Information

Microprocessor Products

DESCRIPTION

The Signetics SCB68172 VMEbus Controller (BUSCON) is an interface device for the VMEbus. It can be used in three different configurations: master-only, slave-only, and master/slave. The SCB68172 can be used with a processor-type interface or with a DMA controller-type interface. In all configurations, it handles the VMEbus signaling protocol in compliance with revisions B and C of the VMEbus Specification.

CONFIGURATION/VERSION

Applications of the BUSCON are identified as follows (see figures 1 through 4):

VERSION	APPLICATION
PMS	Processor-type master/slave
DMAC	DMA controller-type master/ slave
MS	Either PMS or (DMAC)
M	Master-only
S	Slave-only

All of these applications are handled by the SCB68172, with unused pins tied to stated logic levels in some of the applications.

Figure 5 shows a functional model of the SCB68172 logic. The ASN, MASN, LBRN, BGINN, and RELSE inputs are internally synchronized to CLK before being presented to the state machine which determines the major functions of the device. The SLVN, ONBD, and VMEN signals are used directly in the state machine, although they are highly qualified to prevent metastable conditions on the state machine outputs. The BRN, BBSYN and LBGN signals are direct state machine outputs, while ASN, MASTENN, VMEENN, SLVSELN, and BGOUTN are derived from the state machine outputs plus some combinatorial qualification.

The DSI, R/WN, DTACKN, BERRN, LDTACKN, and LBERRN inputs function largely as direct combinatorial inputs. The DDIR, DTACKN, BERRN, LDTACKN, LBERRN, and (when applicable) MASN outputs are largely derived directly from these direct inputs, with some qualification from the state machine outputs. The DENN and DSENN outputs have complex multi-case logic which uses both the direct inputs and the state machine outputs.

February 20, 1985

FEATURES

- **Master, slave, or master/slave (dual ported) applications**
- **Helps assure VMEbus compatibility**
- **Allows for address decoding time**
- **Processor or DMA controller interface for master/requester**
- **Master/requester logic allows release on request (ROR) or release when done (RWD) operation, early or intercycle release**
- **Supports and exploits address lookahead**

MICROPROCESSOR CPU FAMILY

FEATURES

- CMOS silicon gate technology
- Low power (4 mA/MHz)
- Software compatible with 6502
- Single +5 V supply ±5%
- Clock speeds up to 4 MHz
- True indexing capability
- Programmable stack pointer
- Interrupt capability
- Non-maskable interrupt
- 8-bit bidirectional data bus
- 64K byte address space
- Internal/external clock oscillator

DESCRIPTION

The VL65C02 and VL65NC02 are 8-bit microprocessor devices produced with CMOS silicon-gate technology. These devices provide advanced system architecture for enhancements in system performance, speed and value over their NMOS counterparts, the 65XX family of microprocessor devices. Both the VL65C02 and VL65NC02 provide 64K bytes of addressable memory and an interrupt input, as well as options for on-chip oscillators and drivers.

The processor features an 8-bit ALU, with a 16-bit address bus. Instructions include decimal as well as binary arithmetic and true indexed addressing modes are available on many. Performance is enhanced through the use of a pipelined architecture. The processor is compatible with DMA devices and has a READY input to synchronize bus accesses for slow memory devices. Both maskable and non-maskable interrupt inputs are provided for fast response to external system requirements.

VL4500A

64K DYNAMIC RAM CONTROLLER

FEATURES

- Controls 64K DRAMs in a single chip
- Creates Static RAM appearance
- Contains all mux, refresh and timing control logic
- Directly addresses up to 32 chips
- Operates from microprocessor clock
- Requires no xtals, delay lines or RCs
- Supports internal/external refresh
- Supports various refresh modes:
  - Distributed
  - Burst
  - Cycle Steal

DESCRIPTION

The VL4500A is a monolithic DRAM system controller designed to do address multiplexing, timing and refresh/access arbitration functions to simplify the interface of DRAMs to microprocessor systems.
The controller has a 16-bit multiplexer that generates the address lines for the memory device from the 16 system address bits and provides the strobes required by the memory to decode the address.
8-bit counter generates 256 row addresses required to refresh the memories.

A refresh timer is provided that generates the necessary timing to refresh dynamic memories and assure data retention. The VL4500A also contains refresh/access arbitration circuitry to resolve conflicts between memory access cycles and refresh cycles. The device is directly compatible with the TI TMS4500A and is available with access times ranging from 150 to 250 ns. The VL4500A is offered in 40-pin 600 mil dual in-line plastic package and operates over the 0° to 70° C temperature range.

DESCRIPTION

The VL4502 is a CMOS monolithic DRAM controller designed to provide address multiplexing, timing and refresh/access arbitration functions to simplify the interface of DRAM to microprocessor systems.

The controller contains a 16-bit multiplexer that generates the address lines for the memory device from the 16 system address bits and provides the strobe signals required by the memory to decode the address. An 8-bit refresh counter generates the 256 row addresses required to refresh the memories.

A refresh timer generates the timing necessary to refresh the dynamic memories and assure data retention. The VL4502 also contains refresh/access arbitration circuitry to resolve conflicts between memory access cycles and refresh cycles. The device is directly compatible with the TI THCT4502, and is available with access times ranging from 150 to 250 ns. The VL4502 is offered in a 48-pin 600 mil dual in-line plastic package and operates over the 0° to 70° C temperature range.

VL279X

FLOPPY DISK FORMATTER / CONTROLLER FAMILY

FEATURES

- On-chip PLL data/clock separator
- On-chip write precompensation
- Single +5 V supply
- Accommodates single/double density formats:
  - IBM 3740 (FM)
  - IBM 34 (MFM)
- Automatic seek with verify
- Multiple sector read/write
- Programmable control:
  - Track-to-track step rates
  - Head-load timing

DESCRIPTION

The VL2793 and VL2797 are NMOS controllers that perform functions of floppy disk formatting and control in a single chip implementation. The VL279X is IBM 3740 compatible in single density mode (FM), and IBM System 34 compatible in the double density mode (MFM). The VL279X contains the features of the WD179X, plus a high performance PLL data/clock separator and a write precompensation logic. Write precompensation is automatically engaged to a value programmed via an external potentiometer. The VL279X has been made as close as possible to the WD1771, WD179X to maintain software compatibility.

The processor interface consists of an 8-bit bidirectional data bus for data, status and control transfers. The VL2793 is exactly compatible with the VL2797 except that the data lines (DAL0 - DAL7) are active HIGH on the VL2793 and active LOW on the VL2797. All outputs will drive one TTL load, or three LS loads. The VL2797 has a side select output for controlling double sided disk drives.

ORDER INFORMATION

Active **HIGH**	VL2793-PC	VL2793-CC
Active **LOW**	VL2797-PC	VL2797-CC

VL1935

SYNCHRONOUS DATA LINK CONTROLLER

FEATURES

- Synchronous serial interface circuit
- Supports the following protocols:
  - SDLC
  - HDLC
  - ADCCP
  - CCITT X.25
- Operates up to 2 Mbps
- Internal digital data/clock separator
- Double buffered data paths
- Complete modem control handshakes
- Automatic zero insertion/deletion
- Maintenance mode for self-test
- 40-pin package

DESCRIPTION

The VL1935 is an HMOS microcomputer data communications controller which interfaces a parallel system to a synchronous serial data communication channel using ISO HDLC, IBM's SDLC or ANSI ADCCP protocol. The circuit is TTL compatible on all inputs and outputs. The design of the circuit requires minimal software support from the host CPU, while offering support for all of the low-level tasks needed to support synchronous protocols.

The receiver and transmitter logic operate as two totally independent sections with a minimum amount of common logic. Frames are automatically checked for errors during reception by verifying correct frame check sequence information. In the transmit mode the FCS is automatically generated by the controller and sent before the final closing flag. In the receive mode, the controller calculates the value for the FCS based on the incoming data stream and compares this with the FCS received. Any difference in these FCSs is reported to the host processor as an error.

VL16160

RASTER OP GRAPHICS / BOOLEAN OPERATION ALU

FEATURES

- Provides hardware assist for raster operations
- Includes 32-bit barrel shifter
- Performance increase:
  Monochrome - 4 X
  Color - 4 X (Planes)
- Supports printers and CRT terminals
- Compatible with color as well as monochrome
- Implements all 256 possible raster operations
- Performs source/destination alignment on a pixel basis
- TTL Compatible
- Single +5 V supply ±5%
- 28 pin package

DESCRIPTION

The VL16160 Raster Op ALU (RALU) provides hardware assisted performance enhancement for bit manipulation operations used in bit mapped graphics displays. These bit block translation operations (BITBLT) allow bit mapped images to be combined by logical operators. The operations include AND, OR, XOR and can be used on source, destination, and pattern data. Support for masking with multiple mask registers for clipping is also included.

BITBLT is general purpose and can be used in a wide range of graphics operations including text display using arbitrary fonts, attributes and enhancements. Successive applications of BITBLTs can perform scaling, filling, rotating, and texturing. These operations are not limited to CRT devices since the manipulations take place in a screen buffer RAM. The RALU is a natural solution for laser printer applications. The RALU is available with a 120 ns access time.

DESCRIPTION

The VL6845X and VL68C45X are a family of CRT controllers that are widely used in bit mapped and character mapped applications for both terminals and personal computers. The VL6845 family is compatible with Motorola's family of HMOS controllers, while the VL68C45 family allows designs to consume less power through the use of CMOS technology. In addition to compatibility with both the Motorola and Hitachi families, the VL68C45R contains enhancements found in the MC6845R1. These enhancements allow for higher resolution of displays without extra external hardware.

The VL6845 family is available in a range of bus and character clock rates, with bus clocks up to 3 MHz and character clocks up to 5 MHz. These CRT controllers are pin and functionally compatible with their counterparts offered by other vendors.

DESCRIPTION

The VL6765 Double Density Floppy Disk Controller (DDFDC) interfaces up to four floppies to an 8-bit or 16-bit microprocessor based systems including i8088, and MC68000. The DDFDC simplifies system design by minimizing the number of external hardware components and software steps needed to implement the floppy disk drive interface. Control signals provided by the DDFDC reduce the number of components required in the external phase locked loop and write precompensation circuitry. The DDFDC supports both IBM 3740 single-density (FM) and IBM system 34 double-density (MFM) formats.

The DDFDC directly interfaces to the synchronous microprocessor bus and operates with 8-bit data transferred on the bus in either DMA or non-DMA mode. In DMA mode the CPU loads the command into the DDFDC and all data transfers occur under DMA control. The VL6765 is directly compatible with the µPD8257 direct memory access control device. In the non-DMA mode, the DDFDC generates an interrupt to the CPU indicating that a byte of data is available.

DESCRIPTION

The VL2661 is an asynchronous/synchronous serial interface designed to support low cost applications requiring a wide range of serial protocol support. The EPCI features double buffered data paths in the transmitter and the receiver for easier use in real time systems. No system clock is required since the EPCI contains an internal baud-rate generator capable of generating bit rates up to 38.4 Kbps in the X64 divide mode. Higher bit rates are possible by programming the clock divisor to X16 or X1 (up to 1 Mbps).

For reliable systems application, the EPCI contains built in loop-back test hardware so that data paths may be verified without added hardware complexity. Three versions of the EPCI are available to operate with different crystal frequencies giving various bit rates with minimum frequency errors. All inputs and outputs are TTL compatible, and the RXC and TXC pins are short circuit protected. The EPCI is available in a 28-pin dual in-line package.

DESCRIPTION

The VL6522/VL65C22 is a pair of flexible I/O devices for use with the 65XX family of processors. The VL65C22 is a CMOS implementation of the VL6522 device. The VL65C22 includes functions for programmed control of up to two peripheral devices (ports A and B). Two program controlled 8-bit bidirectional peripheral I/O ports allow direct interfacing between the microprocessor and selected peripheral devices. Two programmable Data Direction Registers (A and B) allow selection of data direction (input vs output) on an individual line by line basis. Also provided are two programmable 16-bit counter/timers with latches. Timer 1 can be operated in a one-shot interrupt mode with interrupts on each count-to-zero or in a free running mode with a series of evenly spaced interrupts. Timer 2 functions as both an interval and pulse counter. Serial data transfers are provided by a shift register. Application versatility is futher increased by various control registers, including an interrupt flag register, an interrupt enable register and two function control registers.

DESCRIPTION

The VL16C450 is an improved version of the VL82C50A asynchronous communications element (ACE). The changes in specifications allow the VL16C450 to be bus compatible with current microprocessors requiring very fast access times.

The VL16C450, VL82C50A and VL82C50 each function as a serial data input/output interface for microprocessor based systems. The functionality of the ACE is programmed by system software via a 3-state 8-bit bi-directional data bus. The ACE performs serial to parallel conversion of data characters sent from a modem or other communications device. It provides parallel to serial conversion of data received from the host CPU.

The ACE includes a programmable baud rate generator that is capable of making all standard baud rates by dividing a timing reference clock by a divisor ranging from 1 to $2^{(16)}-1$. Also included in the ACE is a complete set of MODEM controls that can generate interrupts or be polled.

DESCRIPTION

The VL6551 and VL65C51 are a family of data communications devices which support the 6500 series processor applications. These parts are available in HMOS and low power CMOS technology. The VL65C51 offers many versatile features for interfacing processors to serial communication devices and data sets. The VL65C51 includes an internal baud rate generator that can be programmed to provide baud rates from 50 bps to 19.2 Kbps. The baud rate generator uses a commonly available 1.8432 MHz external crystal. For non-standard bit rates, the VL65C51 can use an external oscillator to provide bit rates up to 125 Kbps in the 16 x input mode. In addition to the many features offered by the VL65C51 architecture, the part offers all of the advantages of CMOS technology such as high speed operation, increased noise immunity, higher reliability, and greatly reduced power consumption. The part is offered in a 28-pin dual in-line package.

DESCRIPTION

The VL8530 SCC Serial Communications Controller is a dual-channel, multi-protocol data communications peripheral designed for use with conventional non-multiplexed buses. The SCC functions as a serial-to-parallel, parallel-to-serial converter/controller. The SCC can be software-configured to satisfy a wide variety of serial communications applications. The device contains a variety of new, sophisticated internal functions including on-chip baud rate generators, Digital Phase-Locked Loops, and crystal oscillators that dramatically reduce the need for external logic.

The SCC handles asynchronous formats, Synchronous byte-oriented protocols such as IBM Bisync, and Synchronous bit-oriented protocols such as HDLC and IBM SDLC. This versatile device supports virtually any serial data transfer application (cassette, diskette, tape drives, etc.).

The device can generate and check CRC codes in any Synchronous mode and can be programmed to check data integrity in various modes. The SCC also has facilities for modem controls in both channels.

DESCRIPTION

The VL177X family of floppy disk controllers function as controller/formatters for 5 1/4 inch floppy drives. This family has two members offering either standard 1793 head step rates (1770) or faster step rates (1772). These parts are all similar to their predecessor, the 1793, but also contain a digital data/clock separator and write precompensation logic. The drive side of the FDC needs no additional logic except for buffers and receivers. Hardware support is minimized by including a motor-on signal on the 1770. This does away with the need for an extra bit of I/O control.

The device has been designed for the control of 5 1/4 inch floppy disk drives with data rates of 125 Kbps (using single density) or 250 Kbps (double density). In addition, write precompensation of 125 ns from nominal can be enabled at any point through simple software commands. The processor bus interface is an 8-bit bidirectional port that can drive one TTL or three LS loads.

DESCRIPTION

The VL82C37A is a CMOS implementation of the i8237A DMA controller used in many personal computers. This device is a peripheral interface for microprocessor based systems. It is designed to improve system performance by allowing external devices to directly transfer information from the system memory. The VL82C37A offers a wide variety of programmable control features to enhance data throughout. A system optimization program allows dynamic reconfiguration under program control.

The VL82C37A can be used in conjunction with an external 8-bit address register. It contains four independent channels and may be expanded to any number by cascading additional controller chips.

Three basic transfer modes allow the best use of system bus bandwidth. The VL82C37A can be programmed to operate in the burst, cycle steal or demand mode. Each channel can address a full 64K address space. Each channel can be programmed to auto-initialize at the end of a process.

VL7C103

300 BPS SINGLE CHIP MODEM

FEATURES

- Low cost single chip 300 bps modem
- Full answer and originate operation
- Uses switched capacitor filters
- Implements all filters and hybrid circuits on chip
- Output level up to -9 dBm with 600 ohm line impedance
- Analog loop back capibility for testing
- Power down mode for low power use
- Low power CMOS design
- Single +5 V supply ±5%
- Bell 103 compatible
- Compatible with:
  - NS74HC943 - Direct replacement
  - TMS 99532 - Functional replacement
- 20-pin package

DESCRIPTION

The VL7C103 is a single chip, full duplex 300 bit per second modem compatible with the Bell 103 specifications. It is intended for data communications over the general switched telephone network and can be used on other voice-band channels.

The VL7C103 requires a single +5 V supply, and is implemented in 3-micron CMOS switched capacitor technology. This part is pin compatible with National Semiconductors NS74HC943, and functionally compatible with Texas Instruments TMS 99532.

Applications include integrated and stand-alone low speed modems for terminals, personal computers, business systems, remote diagnostic systems, industrial control systems, and business machines. Since the VL7C103 is a CMOS circuit, it is ideal for built-in modems in portable or lap-top computers.

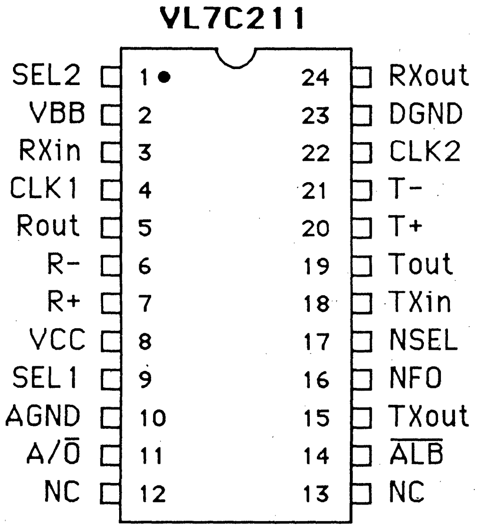
1200 BAUD MODEM FILTER

FEATURES

- Transmit and receive filters with half channel compromise amplitude and group delay equalization
- Built-in call progress mode
- Answer/originate mode switching
- Bell 212A and CCITT V.22 compatible
- V.22 notch filters included
- Compatible with north american and european modem designs
- Analog loop-back capability for better built-in test modes
- Improved error rate characteristics
- Single +5 V supply ±5%
- 24-pin package
- Pin and functionally compatible with:
  AMI S35212
  Reticon R5632
- 24-pin package

PIN CONFIGURATION



DESCRIPTION

The VL7C211 modem filter is a monolithic CMOS switched capacitor filter circuit designed for use in full duplex 1200 bit per second modems. It meets the filtering requirements of the Bell 212A and CCITT V.22 modem specifications. It includes high-band (2400 Hz) and low-band (1200 Hz) filters, half channel compromise amplitude and group delay equalizers, and smoothing filters for both bands. For CCITT V.22 applications, a notch filter is included that can be programmed for either 550 Hz or 1800 Hz. Two uncommitted operational amplifiers are included in the VL7C211 and can be used for anti-aliasing filters or gain control.

The VL7C211 is pin and function compatible with the AMI S35212 and S35212A filters and Reticon R5632. The high band filter of the VL7C211 can be scaled down by a factor of six so that it can be used to monitor call progress tones in intelligent modem applications. Like the 35212A, it has an analog loop-back mode for complete testing of the signal path.

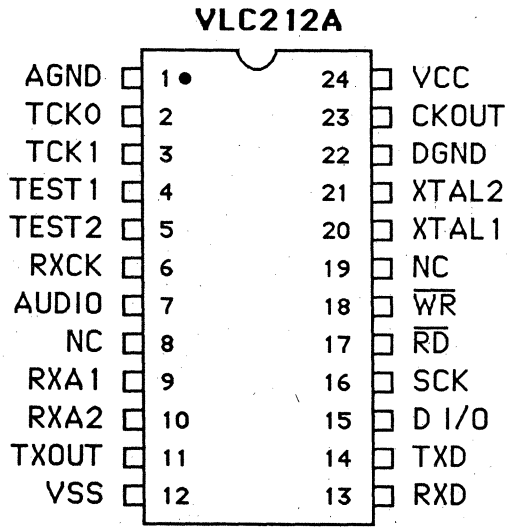
1200 BAUD MODEM

FEATURES

- Single Chip 300/1200 bps modem circuit
- Transmit and Receive filters with half channel compromise amplitude and group delay equalization
- Built-in Call Progress Mode / DTMF gen
- Answer / originate mode switching
- Bell 212A and CCITT V.22 compatible
- V.22 notch filters included
- Compatible with North American and European modem designs
- Analog loop back capability for better built-in test modes
- Improved error rate characteristics
- 24 pin package

PIN CONFIGURATION



DESCRIPTION

The VL7C212A modem is a complete 300 / 1200 baud modem in a single chip. This device is designed with advanced switched capacitor technology for simple low cost applications. The device includes all of the signal processing functions required to make a 300/1200 bps Bell 212A or CCITT V.22 compatible modem. In addition to the modem functions, the device includes capabilities for call progress monitoring as well as generation of DTMF and V.22 guard tones. With the addition of a single chip microprocessor and a Data Access Arrangement (DAA) a highly integrated, low cost modem can be built around a minimum chip set. control.

The VL7C212A is pin compatible with the Sierra SC11004, and functionally compatible with devices offered by Fairchild. When used with a 7C213 modem controller, a complete Hayes command set compatible modem can be configured taking up a minimum amount of board space. Similar to the other VL7C2XX modem products, this one includes an analog loopback capability for complete self test.

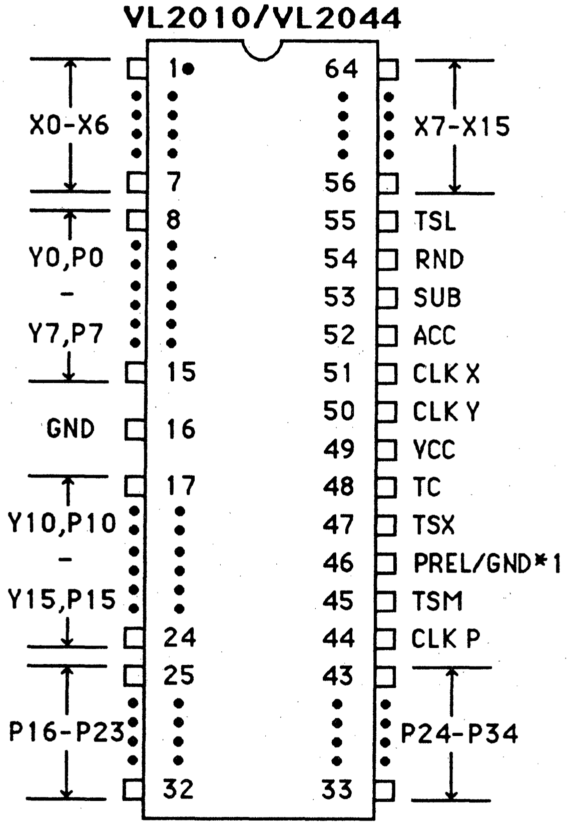
VL2010 • VL2044

16 X 16 MULTIPLIER/ACCUMULATOR

FEATURES

- 16x16 parallel multiply/accumulate
- CMOS silicon-gate technology
- High speed operation
  VL20XX-90 65ns typ 90ns max
  VL20XX-65 50ns typ 65ns max
- Low power; 0.2W typical
- Performs double-precision substraction, addition, and multiplication, including rounding control
- With the exception of preload function, pin-for-pin functional replacement for WTL1010, WTL2010, TRW TDC1010J, LMA1010, and AMD29510

PIN CONFIGURATION



*1 This pin is ground on VL2044, and preload on VL2010.

DESCRIPTION

The VL2044 is a 16x16 parallel multiplier-accumulator (MAC). Fabricated using CMOS silicon-gate technology, the VL2044 offers ultralow power and very high performance. The high performance is achieved through high-speed operation, use of the efficient Booth's algorithm and advanced VLSI technology.

The VL2044 operates from a single 5 volt supply and is compatible with standard TTL logic levels. **Except for the preload function, the VL2044 is a pin-for-pin functional replacement for the VL2010, WTL1010, TRW TDC1010J or AMD29510.**

The VL2044 can be efficiently applied in a variety of digital signal processing functions, including digital filtering (recursive, non-recursive, wave) and FFT processing (complex multiplication, butterfly computation). In addition, the VL2044 can be employed effectively in upgrading the computational capability of mini- and microcomputer systems.

Z84C00 CMOS
Z80®C CPU Central Processing Unit

Zilog

FEATURES

- The Z80C combines the high performance of the Z80 CPU with extremely low power consumption which results in increased reliability and very low system power requirements. This dramatic power savings makes the Z80C a natural choice for both hand-held and battery back-up operations.
- Two speed grades:
  Z84C00 DC to 2.5 MHz.
  Z84C00-4 DC to 4.0 MHz.
- Pin compatible with Z80 and Z80L CPUs.
- Software compatible with Z80 and Z80L CPUs. The extensive instruction set contains 158 instructions, including the 8080A instruction set as a subset.
- Single 5 volt power supply (± 10%).
- Duplicate set of both general-purpose and flag registers.
- Two sixteen bit index registers.
- Low Power Consumption
  Z84C00 9 mA typical Icc
  Z84C00-4 15 mA typical Icc
  Standby current less than 10 μA @ 5V
- On-chip dynamic memory refresh counter.

Z84C20 CMOS
Z80®C PIO Parallel Input/Output

FEATURES

- Provides a direct interface between Z80 microcomputer systems and peripheral devices.
- Two ports with interrupt-driven handshake for fast response.
- Four programmable operating modes: Output, Input, Bidirectional (Port A only), and Bit Control
- Programmable interrupts on peripheral status conditions.
- Standard Z80 Family bus-request and prioritized interrupt-request daisy chains implemented without external logic.
- The eight Port B outputs can drive Darlington transistors (1.5 mA at 1.5V).

Z84C30 CMOS
Z80® C CTC Counter/Timer Circuit

FEATURES

- Four independently programmable counter/timer channels, each with a readable downcounter and a selectable 16 or 256 prescaler. Downcounters are reloaded automatically at zero count.
- Selectable positive or negative trigger initiates timer operation.
- Three channels have Zero Count/Timeout outputs capable of driving Darlington transistors.
- Interfaces directly to the Z80 CPU or—for baud rate generation—to the Z80 SIO.
- Standard Z80 Family daisy-chain interrupt structure provides fully vectored, prioritized interrupts without external logic. The CTC may also be used as an interrupt controller.

Z84C40/1/2/4 CMOS Z80® C SIO Serial Input/Output Controller

Zilog

FEATURES

- Two independent full-duplex channels, with separate control and status lines for modems or other devices.
- Data rate in the x1 clock mode of 0 to 800K bits/second with a 4.0 MHz clock.
- Asynchronous protocols: everything necessary for complete messages in 5, 6, 7, or 8 bits/character. Includes variable stop bits and several clock-rate multipliers; break generation and detection; parity; overrun and framing error detection.

Z8® Z8601 Microcomputer, 2K ROM Z8® Z8603 Prototyping Device with EPROM Interface

FEATURES

- Complete microcomputer, 2K bytes of ROM, 128 bytes of RAM, 32 I/O lines, and up to 62K bytes addressable external space each for program and data memory.
- 144-byte register file, including 124 general-purpose registers, four I/O port registers, and 16 status and control registers.
- Average instruction execution time of 1.5μs, maximum of 3μs.
- Vectored, priority interrupts for I/O, counter/timers, and UART.
- Full-duplex UART and two programmable 8-bit counter/timers, each with a 6-bit programmable prescaler.
- Register Pointer so that short, fast instructions can access any of nine working register groups in 1 μs.
- On-chip oscillator that accepts crystal or external clock drive.
- Single +5V power supply—all pins TTL-compatible.

Z8530 SCC Serial Communications Controller

FEATURES

- Two independent, 0 to 2.5M bit/second, full-duplex channels, each with a separate crystal oscillator, baud rate generator, and Digital Phase-Locked Loop for clock recovery.
- Multi-protocol operation under program control; programmable for NRZ, NRZI, or FM data encoding.
- Asynchronous mode with five to eight bits and one, one and one-half, or two stop bits per character; programmable clock factor; break detection and generation; parity, overrun, and framing error detection.
- Synchronous mode with internal or external character synchronization on one or two synchronous characters and CRC generation and checking with CRC-16 or CRC-CCITT preset to either 1s or 0s.
- SDLC/HDLC mode with comprehensive frame-level control, automatic zero insertion and deletion, I-field residue handling, abort generation and detection, CRC generation and checking, and SDLC Loop mode operation.

Z8536 CIO Counter/Timer and Parallel I/O Unit

FEATURES

- Two independent 8-bit, double-buffered, bidirectional I/O ports plus a 4-bit special-purpose I/O port. I/O ports feature programmable polarity, programmable direction (Bit mode), "pulse catchers," and programmable open-drain outputs.
- Four handshake modes, including 3-Wire (like the IEEE-488).
- REQUEST/WAIT signal for high-speed data transfer.
- Flexible pattern-recognition logic, programmable as a 16-vector interrupt controller.
- Three independent 16-bit counter/timers with up to four external access lines per counter/timer (count input, output, gate, and trigger), and three output duty cycles (pulsed, one-shot, and square-wave), programmable as retriggerable or nonretriggerable.
- Easy to use since all registers are read/write.

- Complete slave Z8 microcomputer, for distributed processing use.
- Unmatched power of Z8 architecture and instruction set.
- Three programmable I/O ports, two with optional 2-Wire Handshake.
- Six levels of priority interrupts from eight sources: six from external sources and two from internal sources.
- Two programmable 8-bit counter/timers each with a 6-bit prescaler. Counter/Timer T0 is driven by an internal source, and Counter/Timer T1 can be driven by internal or external sources. Both counter/timers are independent of program execution.
- 256-byte register file, accessible by both the master CPU and UPC, as allocated in the UPC program.
- Z8090 and Z8590—2K bytes of on-chip ROM for efficiency and versatility.
- Z8094 and Z8594—2K bytes of RAM or EPROM for efficiency and versatility.

- Improved Z8® instruction set includes multiply and divide instructions, Boolean and BCD operations.
- Additional instructions support threaded-code languages, such as "Forth."
- 325 byte registers, including 272 general-purpose registers, and 53 mode and control registers.
- Addressing of up to 128K bytes of memory.
- Two register pointers allow use of short and fast instructions to access register groups within 1 μs.
- Direct Memory Access controller (DMA).
- Two 16-bit counter/timers.
- Up to 32 bit-programmable and 8 byte-programmable I/O lines, with 2 handshake channels.
- Interrupt structure supports:
  - ☐ 27 interrupt sources
  - ☐ 16 interrupt vectors (2 reserved for future versions)
  - ☐ 8 interrupt levels
  - ☐ Servicing in 1 μs. (1 level only)
- Full-duplex UART with special features.
- On-chip oscillator.
- 12 MHz clock.

- 128-byte FIFO buffer provides asynchronous bidirectional CPU/CPU or CPU/peripheral interface, expandable to any width in byte increments by use of multiple FIOs.
- Interlocked 2-Wire or 3-Wire Handshake logic port mode; Z-BUS or non-Z-BUS interface.
- Pattern-recognition logic stops DMA transfers and/or interrupts CPU; preset byte count can initiate variable-length DMA transfers.
- Seven sources of vectored/nonvectored interrupt which include pattern-match, byte count, empty or full buffer status; a dedicated "mailbox" register with interrupt capability provides CPU/CPU communication.
- $\overline{\text{REQUEST}}/\overline{\text{WAIT}}$ lines control high-speed data transfers.
- All functions are software controlled via directly addressable read/write registers.

New X.25 solutions. From $1200.*

Three intelligent Multibus† boards from SBE, all with X.25 on board. Each is a complete X.25 communication solution. Each offers multiple hardware options. And all three are ready to use right out of the box.

There's no extra software to buy. You get everything you need to implement levels 1, 2 and 3 of the ISO model in your Multibus system.

Your choice of three communication boards gives you unprecedented hardware flexibility. Choose up to 8 serial ports. Baud rates from 1 bit to 3 megabits per second. DMA channels–2, 4, or none. And on-board RAM–128K, 256K, 512K, or 1 Megabyte.

The starting price is $1200 in quantity 100 for a card with two serial ports, 128K bytes of RAM, and X.25 in EPROM.

SBE offers in-depth technical support hard to find elsewhere. A phone call puts you right on the line with one of our top technical people.

We provide hardware, software and support–everything you need from a single source.

SBE, Inc., 2400 Bisso Lane, Concord, California 94520. Phone us for literature mailed the same day.

1-800-221-6458. In California 1-800-328-9900 or (415) 680-7722. TWX 910-366-2116.

SBE

Your partner in computer boards and systems.

Launch your aerospace designs sooner!

Get HP's new Microprogram Development Subsystem and multi-emulation capability.

To get your aerospace designs to market faster, think HP real-time emulation and analysis products. The new HP 64276 Microprogram Development Subsystem (microDS) can really speed system development along.

By combining the new HP microDS with other HP 64000 development system tools like the HP 64610S Timing Analyzer and HP 64320S 25MHz State Analyzer, you'll have more power to help you stay on schedule. And maintain high standards of product quality.

You can even link our microDS to other HP emulators, to support your multiprocessor designs. We offer microprogram development support for AMD AM2900/AM 29100/AM29300 families, the TI AS888/890 family, and other vendors' families, too.

Designing for military applications? You'll benefit from our new F9450 emulator. DSP applications? There's our new TMS 32010 emulator. And that's just the beginning.

Only HP offers you a wide choice of high-performance emulator products, plus the systems, tools, and technical support you need at each step of the hardware and software development process—from inception to completion. So the entire process runs smoother.

Why wait? Start launching your aerospace designs faster and easier today. For more information, call the HP sales office nearest you listed in the telephone directory white pages. Ask for the electronic instruments department. Or call us at 1-800-447-3282 (in Colorado call 1-590-3340 collect) for information on our new emulators.

INTRODUCTION TO MICROPROCESSOR DEVELOPMENT SYSTEMS

This section describes the tools used in developing software programs for microprocessors. Microprocessors supported range from 2-bit slice families and 4-bit processors to 32-bit machines. Development systems described in the Master Selection Guide range from simple, single-user text-editing stations to multiuser computers dedicated to software development. Manufacturers are sequenced alphabetically, and each system is described by a listing of performance parameters. These parameters include supported microprocessors, user RAM, mass-memory size and type, software support. The software and tools listed range from standard executive programs to high-level language compilers and interpreters.

Detailed Product Information provided by:

American Automation	1901
Hi-Level Technology	1902
Inmos	1903
Motorola Semiconductor	1904
Orion Instruments	1908

The manufacturers listed above have provided detailed information on their latest and most significant products.

EINFÜHRUNG MIKROPROZESSOR-ENTWICKLUNGS-SYSTEME

Deiser neue Abschnitt beschreibt alle verwendeten Hilfsmittel zur Entwicklung von Software für Mikroprozessoren. Die unterstützten Mikroprozessoren reichen von 2-Bit-Slice und 4-Bit Prozessoren bis zu 32-Bit Maschinen. Die im Master Selection Guide beschriebenen Entwicklungssysteme reichen von einfachen; Single-user Textedition-Stationen bis zu Multiuser-Computern für die Software-Entwicklung. Die Hersteller sind in alphabetischer Reihenfolge aufgeführt, und jedes System wird durch eine Auflistung de Funktionsparameter beschreiben. Diese Parameter umfassen die unterstützten Mikroprozessoren, die Gröβe von verwendbarem RAM, die Massenspeicher-Gröβe und Art, die Anzahl der anschlieβbaren Stationen und verfügbare Peripheriegeräte. Die Software-Hilfsmittel reichen von Standard Executive Programmen bis zu Compilern und Interpretern für höhere Programmiersprachen.

INTRODUCTION AUX SYSTEMES DE DEVELOPPEMENT DES MICRO-ORDINATEURS

Cette Section est nouvelle cette année. Elle décrit les outils utilises dans le developpement des programmes software pour micro-ordinateurs. Les micro-ordinateurs considérés a'echelonnent des familles à 2 bits aux ordinateurs de 4 bits, et aux appareils de 32 bits. Les systèmes de développement décrits dans le Guide Général de Sélection vont de la simple station d'édition de texte pour un utilisateur, aux ordinateurs à utilisateurs multiples et dedies au developpement du software. Les fabricants sont énumérés par ordre alphabétique, et chaque système est décrit au travers d'une liste de paramètres de performance. Ces paramètres comprennent les micro-ordinateurs supportés, la RAM avec maximum d'utilisateurs, la taille et le type de mémoire de masse, le nombre de stations utilisatrices, et l'équipement périphérique disponible. Les outils software considérés s'etendent des programmes standards d'exécution aux programmes plus puissants de traduction de language et de compilation.

INTRODUCCIÓN A LOS SISTEMAS DE DESARROLLO DEL MICROPROCESOR

Esta sección, nueva para este año, describe las herramientas usadas en el desarrollo de programas para microprocesores.

Microprocesores con radio de acción de familias de 2-bit y 4-bit a equipo de 32-bit. Sistemas de desarrollo descritas en la Guía Maestra de Selección abarca de una simple estación editora, a computadoras de uso múltiple dedicadas al desarrollo de programas. Los fabricantes aparecen en sequencia alfabética, y cada sistema es descrito con una lista de parámetros de rendimiento. Estos parámetros incluyen apoyo a microprocesores, uso máximo de RAM, tamaño y tipo de memorias, número de estaciones de operadores, y equipo periferal disponsible. Programas mencionados abarcan de programas ejecutivos standard a lenguaje de alto nivel para compiladores e intérpretes.

マイクロプロセサー開発システムへの案内

本年から新たに加わったこのセクションにはマイクロプロセサーのソフトウエアプログラムを開発する為の情報が記載されています。カバーされているマイクロプロセサーは２ビットスライスファミリー，４ビットプロセサーから３２ビットマシーン迄あります。マスターセレクションガイド中の開発システムは簡単な個人が使用するテキスト編集ステーションからソフトウエア開発用多人数使用のコンピュータ迄と広くカバーされています。メーカーはＡＢＣ順に，各システムはその性能パラメーターの記載毎に説明しています。このパラメーターは必要なマイクロプロセサー，マキシマムユーザーＲＡＭ，マスメモリーサイズ，形名，ユーザーステーションの数，週辺機器等を網羅しています。

記載されているソフトウエア情報は標準エクザクティブプログラムから高級なランゲージコンパイラー，インタープリターに及んでいます。

MDS: Dedicated or Universal?

Microprocessor development systems (MDSs) have evolved from simple design aids to dedicated computer systems. The variety of MDS hardware now available ranges from simple PROM programmers for entering hand-assembled code to sophisticated multiuser systems representing a sizeable capital investment.

High-end software tools generally are of no concern to designers who use microprocessors primarily for logic replacement. Many programs for these applications can be hand-written in machine code or in very simple assembly language, hand-assembled and edited manually with scissors and paste. But choosing a more sophisticated system requires understanding the relationships between the MDS, the processor it supports and the software tools available for assisting in program development.

Until recently, the choice was limited between a dedicated system supporting a single processor or a family of processors, and a universal system supporting several different processor families. Dedicated-system supporters argue that most of the 50 or more existing microprocessor companies can introduce at least one new processor each year, with each new processor often program-compatible with its predecessor. And it is more desirable to upgrade existing software for these new devices than to start a massive software redesign project.

Moreover, the argument continues, dedicated system suppliers (who also supply the microprocessors supported) can provide software development tools for new processors at least a year before they are available in universal systems. Finally, it is generally acknowledged that universality in an MDS often requires some sacrifice in depth of coverage. Implicit in these arguments, of course, is user commitment to a specific processor or vendor.

On the other hand, universal systems offer a repertoire of multivendor chip support, generally centered about 8-bit processors. The strongest argument for using these systems appears to be the freedom to evaluate the parade of new processor chips emerging from various semiconductor houses. For example, in addition to facilitating hardware/software integration of prototype design, available universal systems can compare the performance of an 8085 (Intel Corp.) against the Z80 (Zilog Inc.), 6800 or 6802 (Motorola Semiconductor Products Inc.), 3872 (Fairchild Camera and Instrument Corp.), the TMS9900 (Texas Instruments Inc.), and the 3870 and 3872 (Mostek Corp.).

To counter the threat posed by universal systems, some vendors are offering systems described as vertical rather than universal (horizontal) or dedicated. These systems support only one vendor's processors, but the devices supported represent a wide performance range. To illustrate, one MDS vendor's system supports 12 of the company's processors, which range from a 2-bit slice up through a 16-bit processor. A user can upgrade a basic system by adding an assembler, high-level language, and an in-circuit emulator module for any of the 12 processors.

Sometimes universality can be acquired with an existing dedicated MDS by upgrading the system with emulators and other development tools. Typically, the instrument connects between the host computer (or dedicated development system), using a different personality pod to provide real-time emulation for a variety of MPUs.

Multistation development systems become another option as program sizes grow. One programmer typically can generate 10 debugged and documented lines of code per day, each line representing from 2 to 10 bytes of machine code. If a time-critical project requires a 100-kbyte application program to be completed within 3 months, then at least 8 programmers are required, each generating 100 bytes of machine code per day. Such requirements need systems resembling a full-fledged computer. with price tags upwards of $100,000 and with as many as 8 programming stations.

Alternatively, several simple development systems can be linked to a mainframe to perform dedicated development functions such as compiling and debugging. The mainframe performs project management functions such as file-sharing and maintenance. If a universal system is needed, cross-software is available from both software houses and MDS vendors. Cross-software allows a program for one processor to be written on a machine containing a different processor. For example, a cross-assembler for the 6800 produces 6800 code, but it executes on a PDP-11 computer.

MDS Hardware

A typical MDS consists of a central processor, mass memory, control console, and software development tools — such as editors, assemblers, compilers and linkers — for translating the programming (source) language and revising the source text. Most systems also provide a printer for generating hard copy.

The CPU executes the control functions necessary for software development and can execute the editor, assembler or program under development.

Mass memory, also called the "file," stores operating programs, developed programs and data. Main system memory stores data and host programs (editor, compiler, etc.) or developed programs. Stored data include editor workspace, symbol tables, input/output (I/O) buffers, and data generated during program development. Main memory can be extended by mass memory.

The lowest level of mass-memory media is punched paper tape in which data are entered by teletypewriter. Because of its low speed, this type of storage is recommended for developing programs having less than 100 lines of code.

Next is magnetic tape cassette with read/write speeds ranging up to 400 characters per second. Tape-cassette systems are economical for programs between 100 and 1000 lines of code.

Long programs require the speed of flexible-disc storage with data-transfer rates exceeding 1000 characters per second. Flexible-disc storage is recommended for programs with between 1000 and 10,000 lines of code. Longer programs require the megabit-per-second transfer rates of hard-disc systems which can store up to tens of megabytes of data. These systems are, of course, the most expensive.

Control consoles provide the means to input source programs, debugging commands, operating system commands and data, and they provide operator feedback such as assembly listings and register displays. Controlled by interactive software, these terminals provide continually updated CRT displays of register content and entire segments of the program under development.

CRT terminals are classified as either dumb, smart or intelligent. Dumb terminals are nonprogrammable and have a limited number of functions. Smart terminals contain an MPU, memory, or both, and they have text-editing capability. Intelligent terminals contain one or more MPUs that can be user-programmed.

To facilitate text editing, CRT displays generally provide information highlighting on the screen, blinking displays, insert/delete capability and smooth scrolling. Console keyboards provide 128 ASCII character code, and keyboard life typically is about 300-million operations. Intelligent keyboards usually have self-diagnostics displayed on the CRT.

As more logic signals formerly accessible for test procedures become buried within the microprocessor chip, the various debugging tools become also increasingly important elements of an MDS.

An in-circuit emulator is a logic card or module cable-connected to the microprocessor socket of the prototype system. The emulator duplicates the processor function and relays indications of system operation to the MDS console or terminal. Usually the MDS RAM simulates ROM or PROM in the system under test. After RAM content is debugged, it is transferred to the prototype's memory.

Single-step facility is a hardware debugging aid that allows the MDS operator to step through the program one instruction at a time while concurrently monitoring system operation.

A logic analyzer can set up breakpoints in the program (such as an address) that stop program execution when encountered. The analyzer stores a block of bus transactions in a limited amount of memory that is refreshed each cycle. When a breakpoint stops program execution, the analyzer displays a number of logical events occurring prior to the breakpoint. Thus the operator can determine if events leading to the breakpoints are correct and modify the program as required, or continue execution.

Printers provide hard-copy records of the developed program. Mechanical types are relatively slow, generating from 150 to 1800 lines per minute, and providing multiple copies of the printout. Higher speeds are provided by thermal, optical, chemical or electrical printers with speeds ranging up to about 21,000 lines per minute. Serial printers produce one character at a time, and line printers generate one line at a time in parallel-character format.

Many systems provide options for linking the MDS with other systems for data exchange. These include paper tape punch and reader, and a modem (modulator-demodulator) that connects an MDS to a large computer via telephone lines. Finally, most systems have either a standard or optional PROM programmer for entering developed programs into prototype memory.

Software Tools

MDS software-tool sophistication has become similar to that of minicomputer software. Many software tools are common to any MDS.

Executive programs (also called operating systems) control the interaction between the MDS peripherals and other software tools by keeping track of time, enforcing correct event sequencing, and controlling I/O functions. An operating system also provides user commands for editing, assembling, compiling, relocating, executing, and debugging the user-developed program from the control console. Some operating systems can perform file-management tasks on floppy or hard-disc memory. Other systems provide this capability in a separate software package called a "file-management system," or include it in the text editor.

Text editors, or simply editors, are programs that allow an

MDS: Dedicated or Universal

operator to enter a source code (assembly or higher-level language) into the MDS memory through an interactive terminal with a keyboard. Through the editor the operator can add, delete, move, change, and display or list selected portions of the source program.

Assemblers are programs that convert source code generated with an editor to machine language (object or binary code). The source code is the assembly language (alphabetic symbols called mnemonics) of the processor for which the program is being written. Assemblers vary in their ability to handle macros (blocks of often-used instruction sequences activated by a single instruction), to generate relocatable code, and to allow certain pseudo-operations. The latter is an instruction that gives information to the assembler instead of causing machine code to be generated.

Compiler and interpreter programs translate high-level programming languages into machine language. Each approach has advantages and drawbacks. Both tools translate each high-level statement into a series of binary instructions. However, a compiler translates the entire program before execution can take place. On the other hand, an interpreter translates and immediately executes each high-level statement before proceeding to the next translation.

Interpreters are more efficient for making program changes since each instruction is executed as it is typed. Therefore, an instruction can be entered, executed, changed, and executed again without the need to exercise the rest of the program. With a compiler, each change requires a retranslation of the entire program.

Although interpreters require more memory than compilers and take more time to execute the final code, they usually provide better real-time error diagnostics. However, microprocessor applications seldom require extensive programmer interaction or program debugging. As a result, a compiler generally is preferred over interpreters for time-critical microprocessor programming applications, and an interpreter is recommended for intensive interfacing or debugging requirements. Many microprocessor development systems provide both tools for overall programming flexibility.

Linkers tie together program segments and subroutines of machine code to form the finished program. Linkers calculate all module address locations so they will interface properly with one another and fit into memory.

Debuggers interactively execute and debug the object program by allowing the programmer to set breakpoints in the routine, control program execution, and examine processor register and memory content. Combined with in-circuit emulators, debuggers also allow control-line and memory-content transfer between host and prototype systems, thereby controlling the degree of emulation. Most debuggers include single-stepping and program-trace capability.

High-Level Languages

Using high-level languages (HLLs) simplifies program coding and debugging since a single statement can be translated by an interpreter or compiler into its equivalent of 20 or more assembly-language statements. Moreover, HLL statements resemble natural English and thus are easily read, documented and understood. The result is high overall programming efficiency.

Although highly convenient for a programmer, using an HLL imposes a penalty. All of the object code statements that the compiler generates for each HIL statement may not be required for every application. Consequently, high-level programs are typically 15 to 20% longer than efficient assembly-language programs. The result is wasted memory space and computer time.

However, the trends toward higher microprocessor speeds and lower memory cost tend to minimize these disadvantages, which are further offset by high programming efficiencies. Moreover, compilers based on so-called implementation languages have assembler-like characteristics, allowing programming in both high-level and assembly languages. Thus a programmer can use an HLL to design the overall program, resorting to assembly language for coding time or space-critical functions, or for coding functions that the HLL is not designed to execute.

High-level language is an increasingly fundamental consideration for selecting an MDS, the more sophisticated of which support several HLLs. In general, an HLL for microprocessor applications should have several characteristics. Foremost of these is block structuring which allows several design teams to work independently on program modules of a large project.

The language should also allow assembly-coded modules to be integrated into the basic program; provide data and register-bit handling capability such as shift and rotate; provide logical operations such as AND, OR, NAND and NOR; provide access to I/O ports and handle interrupts in real time. Also, since microprocessors are not well-suited for computation, they usually require languages that use integer arithmetic instead of floating point or decimal. Available HLLs provide these characteristics in various combinations and degrees of effectiveness.

Software Support		Comments	Model	Source	Line
Standard	Optional				
	CDOS or CROMIX operating system, macroassembler, Cobol, Fortran, Lisp, Structured Basic, Ratfor, data base management, Writemaster, Spellmaster, Planmaster, "C" compiler.	Capable of high-resolution graphics using SDI graphics interface and RGB monitor.	Z80 System 2	Cromemco	
	CDOS or CROMIX operating system, macroassembler, Cobol, Fortran, Lisp, Structured Basic, Ratfor, data base management, Writemaster, Spellmaster, Planmaster, "C" compiler.	Capable of high-resolution graphics using SDI graphics interface and RGB monitor.	Z80 System 3	Cromemco	
CPM operating system and macroassembler.	CyberForth Program Development Package with built-in drivers for I/O and communications boards; real-time, multitasking executive; floating point match module; cross compiler; tracer/debugger and structured assembler.	The CYKEY9990 has a 24 slot card cage that will accept any of over 40 Cyberbus digital I/O, analog I/O and communications boards.	CYKEY9990	Cybersys	
CPM/80, complete disk operating system with editor, assembler, debugger and utilities.	Fortran, Pascal, Basic, PL/I, "C", Cobol, PLMX; Cross-assemblers for all 8-bit microprocessors; multi-tasking operating system.	Hardware options include 1/2-inch magnetic tape, Winchester drive, in-circuit emulation, cassette tape, modem.	DCS/80	DistComp	
Complete disk operating system with editor, assembler, debugger and utilities.	High-level language, Fortran, Cobol, Pascal, Basic, PL/I Cross-assemblers for all 8-bit microprocessors; multi-user, multi-tasking operating system.	Hardware options include 1/2-inch magnetic tape, Winchester drive, in-circuit emulation, cassette tape, modem.	DCS/86	DistComp	5
MicroForth compiler, disk operating system, macroassembler, interactive debug, emulation string and line editor.		Self diagnostics, in-circuit emulator.	EICOMPuMOS	DiversTech	
RT-11 operating system, macro-relocatable cross-assemblers, linker, symbolic debugger, screen-oriented editor, HELP files.	PASCAL and "C" cross-compilers for most processors. All standard DEC software options.	In-circuit emulation of all chips supported. Real-time trace captures all bus activity.	ECL3211	Emulogic	
RT-11 Operating system, macro-relocatable cross-assemblers, linker, symbolic debugger, screen-oriented editor, HELP files.	PASCAL and "C" cross-compilers for most processors. All standard DEC software options.	Multi-user system based on DEC PDP-11 family of host processors. Supports multiple ECL-3211 satellite software/hardware stations as well as standard VT100 software-only stations on host.	EMUNET-1	Emulogic	
RT-11 Operating system, macro-relocatable cross-assemblers, linker, symbolic debugger, screen-oriented editor, HELP files.	PASCAL and "C" cross-compilers for most processors.	Multi-user system based on DEC VAX-11/730, 11/750, and 11/780 host processors. Supports multiple ECL-3211 satellite software/hardware stations as well as standard VT100 software-only stations on host.	EMUNET-2	Emulogic	
2K byte firmware monitor	F8/3870 cross assembler, MSDOS/PCDOS	Full in-circuit emulation of XR3870, XR3872 and F8, programming sockets for XR38E70, and 2716 EPROMs, 4K RAM, 6K EPROM socket space.	XR-38XX	Exar	10
IMDOS multi-user disk operating system and Basic language packages.	Fortran, Pascal, Crossassemblers, PEPLINK, loaders, debugger, and EMUTRAC, control software for F8, F3870, F6800 and F16000 families.	Optional Real-Time Executive Operating System for multitasking in F9445-based systems. Optional video terminal, peripheral controller boards and I/O boards.	FS-1	Fairchild	
Assembler, editor, debug package.		Options: In-circuit emulator, PROM boards, communications boards, floppy disc interface.	Formulator Mark III	Fairchild	
Multitasking time-share oriented disc operating system; macroassembler, test editor, utilities, debuggers; real-time executive.		Peripherals purchased from independent vendors.	Microflame 1	Fairchild	
ROM-based debugging monitor with utility routines and friendly prompts.		Six 8-bit parallel I/O ports with control signals. 50 thru 19.2K bps, independentally selectable, serial ports. 16 memory map configurations, switch selectable. Six sockets for ROM/PROM 2K, 4K or 8K types. Requires serial display terminal and 5V power. Asynchronous multibus compatible.	PEP-68	Fairchild	
Resident line assembler	Optional Personality boards	Connects to host via RS232	GEM-1	GTEMicro	15
UNIX, CP/M68	Fortran, Pascal, Cobol, Basic	Single-board UNIX System.	MINIBOX	Heurikon	
Operating software supplied with each subsystem.	C, Pascal, Assemblers, Linkers, PL/M available for 8086.	Logic Development System: 200/400MHz Timing/125MHz state 8 to 32 channels	HP64000	HP	
Mnemonic debugger with on-line assembly, and EPROM programming support.	Macro-assemblers, linker, emulation package.	Software development and test station for 6801 programs. Programs UV EPROM version of 6801.	6801VICE	HiLevel	

Bold face indicates additional data is provided on the page noted.

Software Support					
Standard	Optional	Comments	Model	Source	Line
Same as Model DS270. Breakpoints can be from data on the TRACE probes, or address.	Same as Model DS270. Downloads from Fairchild cross-assemblers.	Converts to DS270 figuration by changing cables, adding any needed WCS memory. Basic DP9445 has all DS270 specs except WCS width.	DP9445	HiLevel	
Same as Model DS270. Model programs for host to download, run, get TRACE upload as feedback.	Same as Model DS270. Downloads from General Instrument cross-assembler.	Converts to full DS270 or DP9445 by changing cables, adding any needed WCS memory. Basic DP1610 has all DS270 specs except WCS width.	DS1610	HiLevel	
MENU Prompts: Editing, Target Control, Remote operation, Display formatter, Diagnostics, Download models, TRACE dump, Multiple arrays.	Universal meta-assembler for up to 128-bit words, full cross-references, MACRO's, Fortran IV compativle, or CP/M version.	Menus and prompts, histogram or WCS address frequency. Compatible with any assembler, BSO, TMI, MICROTEC. Trace has nesting and data break, search and dump, 8192 breakpoints.	DS270	HiLevel	
MENU Prompts: Editing, Target Control, Remote operation, display formatter, diagnostics, download models, TRACE dump, multiple arrays.	Universal meta-assembler up to 80 bits, MACRO's FORTRAN IV compatible or CP/M version.	Performance analysis measures target activity in 16 user categories. TRACE has 16-level Trigger logic.	DS370	HiLevel	
UNIX time-sharing operating system, PASCAL, Fortran, "C", editor, debugger, word processor, utilities. Built-in diagnostic tests plus DS370 features.	Upgrade of DS270. Adds ability to do fast assemblies on built-in host.	Same as DS270.	DS470	HiLevel	5
UNIX time-sharing op system, Pascal, Fortran, "C", Editor, Debugger, Word Processor, utilities. Built-in diagnostic tests, plus OS370 features.	Upgrade of DS370. Adds the ability to do fast assemblies on the built-in 68000 host. Multi-user up to 4.	Performance analysis, measures target activity in 16 user categories. TRACE has 16-level trigger logic. Superset of DS370 in all ways. CRT menus have help feature.	**DS570**	**HiLevel (1902)**

Stride 440		Cross-Software Package	**IMSD100**	**Inmos (1903)**	
VAX-VMS		Cross-Software Package	**IMSD600**	**Inmos (1903)**	
High level language debugging network, management tools, export/import software, Ethernet Protocall.		Network resource manager provides shared Winchester hard disc, Model 740 cartridge disks and spooled line printer interface for work stations. All existing Intel development systems can be upgraded to be NDS-II work stations. Work stations communicate with the network resource manager via 10M bit Ethernet or local net interconnected with coax.	NDS-II	Intech	10
ISIS 11 disk operating system; ASM-80 macroassembler for 8080, 8085; credit editor; link and locate utilities.	PL/M-80, Fortran, Pascal, Basic, Cobol, Utilities FSP arithmetic package for 8080 and 8085; AMS-86 macroassembler, PL/M-86, link and locate utilities for 8086; assemblers for 8048 and 8089.	In-circuit emulators for all CPUs.	INTELLEC11-MODEL245	Intel	
ISIS operating system, credit full screen copier, macroassembler for 8086/88 and 8080/85, linker and loader, debug-86 debugger.	Pascal, Fortran, PL/M, Cobol, Basic, assemblers for 8089, 8048, 8051 families, utility packages for 8080/85/86/87/88/89 support mainframe link software.		IntellecIII	Intel	
ISIS operating system at workstations, MDS-I operating system at network manager.		Network manager provides shared hard disk and printer spooling for use by up to 8 stations.	NDS-I	Intel	
ISIS-11 disk operating system with relocating macroassembler, linker, locater, and CRT-based CREDIT editor.	IPDS-FTRANS option enables file transfer between iPDS and any Intellec Development System. PL/M, Fortran, Basic, Pascal and Cobol software packages available.	Self-test diagnostic capability, built-in interfaces for high-speed paper tape reader/punch, printer and universal PROM programmer. iMDX557, iAPX resident processor card package is available to upgrade existing iMDX225 series II Development System to Series III. This package supports development of iAPX86/88 processors.	iMDX225	Intel	
ISIS-PDS disk operating system with relocating macroassembler, and CRT-based editor.	CP/M operating system on disc. Fortran/80, PL/M80, PL/M88/86 and Basic. Multiprocessor emulator functions.	Portable, dual processing capability, expandable using multimodule cards. Bubble memory option.	iPDS	Intel	5
UDOS operating system, editor, macro assemblers emulation support, mainframe link.	Basic, Pascal compilers for development.	Simultaneous multi-position emulation.	2300	Kontron	
CP/M operating system, macro assembler, editor linker, emulation support, mainframe link.	Pascal for system programming; PASCAL compiler for development; 3rd party CP/M software. (Basic, Fortran, C)	Ergonomic terminal, distributed computing and central mass storage for multi-users, multi-processor emulation.	KDS	Kontron	
CP/M O.S., editor macro-assemblers, linker development libraries, utilities	Pascal-compilers, C-compilers third party CP/M software	Development Station	KDS-908-04	Kontron

In host.		Operates as a hardware/software development station.	HDS300	Motorola	
VERSAdos multiasking, real-time, multiuser, logical I/O file management; Pascal compiler; macro and linking assembler; page, screen and file-oriented editor, symbolic debugger.	Fortran IV.	Optional real-time trace; ROM, RAM and disk autotest at power-on; board-level fault isolation.	M68000 (EXORmacs)	Motorola	
VERSAdos real-time operating system.	UNIX System V/68 operating system, Pascal, Fortran, "C"		VME/10	Motorola	
In host CPU		Microcontroller On Line Emulator; consists of a host CPU, a MOLE Brain Board, and a MOLE Personality board.	MOLE	National	5
Disk operating system; Fortran compiler; Basic interpreter; on-board ROM diagnostics, utilities.	Text editor, cross-assemblers.	Optional in-circuit emulators for 8048, Z80; personality modules; Starplex-to-Intel MDS link.	STARPLEX	National	
Disk-based operating system, debugger, text editor, assembler, linker, Fortran, Basic, utilities and diagnostics.	PL/M, Pascal.	Starplex II support packages are identical to those of Starplex.	STARPLEXII	National	
	Assembler, C	In-Circuit emulator operational on DEC VAX, Intel Series III and IBM PC.	IE-70108-5	NEC	
	Assembler, C	In-Circuit emulator operational on DEC VAX, Intel Series III and IBM PC.	IE-70116-5	NEC	
MP/M-86	Assembler, C		MD-086FD-10	NEC	10
OB68KMACS (MACSBUG monitor debugger).		Whitesmiths-Idris Forth, Inc-Poly Forth 32, Hemenway-MSP.	OB68K/SYS	Omnibyte	
Idris 2.3—a Unix-like O/S with real-time enhancements, poly-FORTH 32, real-time, multiuser, compact O/S.	Absoft's Fortran 77, JMI's C-Exec, and a 68000 assembler from OASYS all run under Idris.	Has streaming tape capabilities.	OB68K/SYS+	Omnibyte	
Idris 2.3—a Unix-like O/S with real-time enhancements, poly-FORTH 32, real-time, multiuser, compact O/S.	Absoft's Fortran 77, JMI's C-Exec, and a 68000 assembler from OASYS all run under Idris.	Intelligent Diagnost Front Panel monitors current, voltage, temp., 100MB streaming tape.	OB68K/SYSII	Omnibyte	
Integrated software controls Analyzer, Emulator, Stimulus Generator, and PROM Promgrammer, from a single context, has access to MS-DOS programs.	Histogram/Performance Measurement, MS-DOS high-level languages and cross assemblers.	Universal 8/16 Bit Emulator supports 46 processors. Integrated 48-channel bus-state analyzer.	UDL	Orion	
CP/M 2.2 disk operating system with Quay utilities.	5/8 converter cable for 8' drive IBM 3740 format compatibility. Number of Developmental and Applications software packages available.	Packaged system with CRT/terminal included.	500T	Quay	15
Monitor; including display & alter memory contents, dynamic breakpoints with register dumps, program countertracts single stepper and PROM programming.	Basic, Cobol, Fortran, CP/M operating system, assembler, text editor.		99/94FMWS	Quay	
Disk operating system, Level I and Level II, Macroassembler, Full Screen Editor.	Basic 1—Fixed Point Interpreter/Compiler Basic 2—Floating Point Interpreter PLM compiler.		CDP18S008	RCA	
System monitor and floating point Basic interpreter firmware.	System expandable in memory and I/O using any CDP18600 series microboard. Optional 1802, 1804, 6805C ROM-based Assemblers.		CDP18S693	RCA	
System monitor, floating point Basic interpreter, 1802 assembler/text editor firmware. Cassette based PROM programmer software.	Same as CDP18S693.		CDP18S694	RCA	
ROM-Based Floating Point Basic interpreter, Level I 1802 assembler, text editor, System utility ROM, PROM Programmer Software (Cassette).	Video interface System (Interpreter Cassette).	System includes 10' color monitor and keyboard. System software display is color-coded. System is expandable using RCA Microboards.	CDP18S695	RCA	20
Microdos operating system, macroassembler, utilities, 1800 series assemblers.	Full-screen editor; 6805C Assembler; Basic 1 fixed point interpreter/compiler; Basic 2 floating point interpreter; PLM 1800 compiler; micro concurrent Pascal compiler/interpreter (cross-software).	Microemulator, real-time in-circuit emulator, supports emulation of 1802, 1804, 1805, 1806, 6805C and future 8/16 bit micros. Requires user provided terminal or above microemulator.	MS2000	RCA

IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest way to find the optimum device to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER

Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds?
He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs.
Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.

In the United States only:

You can order IC MASTER simply by charging it to your VISA or Master Card credit card. To place your order (USA only) call now: (408) 249-6800/ (516) 227-1300. To order outside the USA, see list of authorized IC MASTER distributors on page 1471 of Vol. I.

ORDER YOUR COPY NOW

EZ-PRO 2.1 + IBM PC = WINNER

...now with
DEEP TRACE™
ez-pro development system
64180
64180

Complete Development Station. EZ-PRO 2.1 connects to your personal computer via RS232 and supports the widest selection of in-circuit emulators. Check the tabulation for the microprocessors you're planning to use. Each emulator is supplied with macro cross-assembler, linker, and symbolic debugger. C Language cross compilers now available for selected microprocessors.

Deep Trace. 4,096 real-time events, 256 break-points with zoning, complex triggering, scatter/gather trace management.

EZ-PRO 2.1 SUPPORTS:

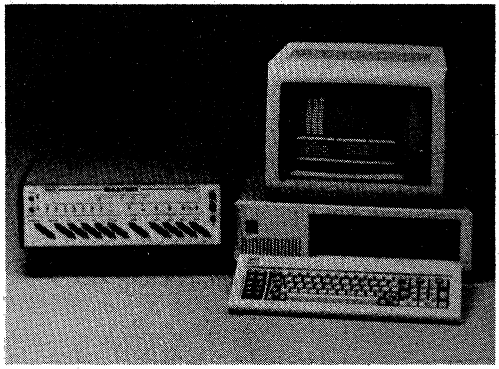
HILEVEL
TECHNOLOGY, INC.

MICROPROGRAMMING?
...THAT'S THE HILEVEL LANGUAGE!



HILEVEL builds two powerful development systems for your work. Both are configurable for all of today's hardware implementations, PROM-BASED or RAM-BASED.

Microcode development is demanding work. Wide words, high speeds, and complex micro-instructions make test and debug a challenge. So, designers must have the best tools for development.

Because firmware fine-tuners need excellent visibility of target activity, HILEVEL introduced the 80-bit, 16K deep real-time TRACE. Now, with 16-level conditional triggering and 8 independent patterns per level, plus selective snapshot, visibility at full clock rate gets even better.

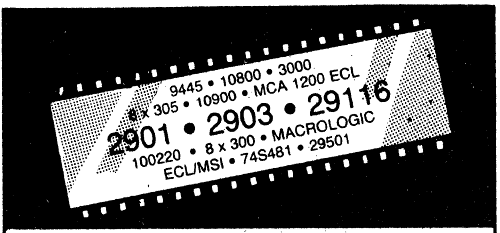
Virtual In-Circuit Emulation lets you see registers, flags...the total status of all your processor chips, instantly. Whatever your architecture.

The DS370's performance-analysis histogram feature allows you to define 16 tasks, then run tests to measure the efficiency of your design.

The newest development system features the DS370 Emulyzer™ combined with the IBM-PC, XT or AT. This system includes the powerful XFIBM software package, which provides a macro-meta assembler, PC communications program, emulyzer programming language (EPL) software program, and a VT100 terminal emulation program.

The UNIX* multi-user development system for microcode is the DS570. It has all features of the DS370, adds assembly in 440K and a 10 megabyte hard disk and supports up to four workstations.

*UNIX is a trademark of Bell Laboratories.



Speeding the development of microprogrammed processors from VLSI to bit-slice to gate array, the HILEVEL EMULYZERS™ contain:

MACRO-META ASSEMBLER
- 8 to 240 bit microword
- 160K to 440K user space

WRITABLE CONTROL STORE
- 16 to 240 bits
- 1K to 65K words
- 20 ns to 120 ns
- Multiple Arrays
- Pattern Generations

TARGET CONTROL
Halt ■ Run ■ Clear
Goto ■ Force ■ Jam

LOGIC STATE ANALYZER
Unlimited Breakpoints ■ Selective Trace
Change While Run ■ Data-Pattern Breaks

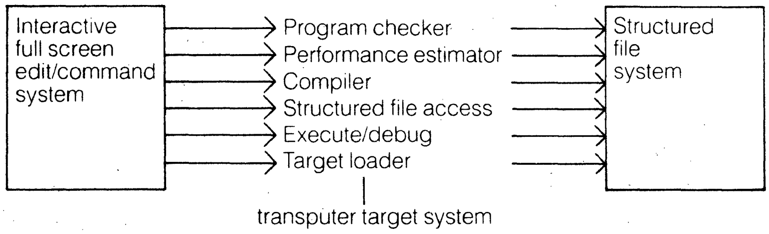
IMS D100
IMS D600
IMS D700
transputer development system

Features

- Fully integrated editor and development toolset
- Compiles occam for:
  - –Execution on development station
  - –Interconnected transputers
- All application development at occam source level
- Hierarchical program structure with separate compilation
- D100 runs on Stride 440 68000 based workstation
- D600 runs on VAX/VMS 11/7xx computers including Micro VAX
- D700 runs on IBM Personal Computer XT and AT under DOS
- Upgrade from IMS P600 Occam Programming System available
- Fully compatible with the IMS B001, IMS B002, and IMS B004 transputer evaluation boards



Interactive full screen edit/command system
Program checker
Performance estimator
Compiler
Structured file access
Execute/debug
Target loader
transputer target system
Structured file system

PC/68000™
Co-Processor Module For The IBM PC

The PC/68000 Co-Processor Module transforms the IBM PC into a powerful development station for use with the HDS-200 and HDS-300 in hardware and software development. The PC/68000 is flexible to allow system design work using many members of the MC6804, MC6805, MC6801, MC6809, and MC68HC11 microcomputer chips. The power of the 10 MHz MC68000 16/32-bit Microprocessor and vast capabilities of UNIX SYSTEM V/68 is available with the co-processor module. A sophisticated I/O kernel and two megabytes of dual-ported DRAM facilitate communications between the dual processors. Extensive buffering and efficient utilization of memory for caching by the PC and its powerful partner allows the MC68000 to run at full speed.

Essentially, PCDOS runs on the PC's processor while SYSTEM V/68 executes on the MC68000. With a dual keystroke, the user can switch between operation under PCDOS or under SYSTEM V/68 and back. Files can be interchanged between operating systems and, under SYSTEM V/68, tasks can run concurrently. (SYSTEM V/68 is derived from the validated port to the MC68000 — UNIX System V/M68000, a product of AT&T Information Systems.)

The PC/68000 Co-Processor Module can be used with an IBM PC having a minimum of 10Mb of hard disk storage (20Mb recommended). Installation requires partitioning of the hard disk into separate areas for the two operating systems, as shown in the diagram for a 10Mb Disk. Any peripheral device that can be installed under PCDOS (2.0 and later versions) can be installed under the I/O kernel and accessed from SYSTEM V/68.

General Description

The Motorola PC/68000 Co-Processor Module is a dual printed circuit board sandwich which plugs into one PC motherboard slot (but occupies the space of two). It has two connectors so that the 16-bit bus in the PC-AT can be interfaced, however, only an 8-bit wide bus is supported when the module is used with the PC or PC-XT. The dual boards contain a 10 MHz MC68000 Microprocessor, two megabytes of dual-ported RAM with control logic and an array interface, MMU circuitry and circuitry which provides bus interface, communications and multiprocessor control functions.

In addition to SYSTEM V/68 and a PC-resident, interrupt driven, I/O kernel which supports all I/O operations, the PC/68000 Co-Processor Module comes with extensive hardware diagnostics for testing the MC68000 and system memory. A user-oriented program that simplifies reconfiguring the system to add another device driver or changing system parameters is also supplied.

Operation depends on the 2Mb of dual-ported RAM which is shared between the PC's processor and the MC68000. To the processor, the memory appears as addressable 64 kilobyte windows of 8-bit wide space throughout the 2Mb. To the MC68000, the memory appears as a linearly addressable 2Mb of 16-bit wide data starting at address 000000. Bidirectional buffers support both 8-bit and 16-bit MC68000 data transfers.

The dual-ported memory control logic performs four services in the Co-Processor — PC environment:

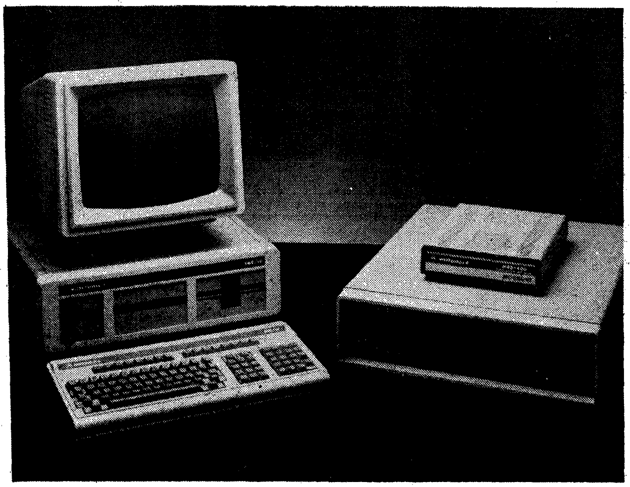
- Arbitrates memory accesses by the MC68000 and the PC
- Insures that a referenced address is within physical memory limits
- Converts the PC's logical address references to correct physical addresses (this allows optional DMA devices to operate properly with the PC)
- Detects reserved memory gaps in the PC address map

Use of memory management frees a user task from the need to precisely track physical addresses. Such assistance is essential in a multitasking application. The MMU in the PC/68000 Co-Processor Module utilizes a page map table to provide hardware protection facilities so that SYSTEM V/68 can operate in the multitasking, multiuser mode. The table contains data from which a maximum of 16 pointers to process contexts can be generated. Using this technique, context switching is extremely fast.

Communications between the MC68000 and the circuitry controlling interface to the PC I/O channel, between the MC68000 and the dual-ported RAM control logic, between the MC68000 and the memory management unit circuitry as well as between the MC68000 and the data block containing bidirectional data buffers for 8- and 16-bit transfers are effected using a fast, asynchronous 16-bit bus. This bus is also brought out to a connector header to permit optional implementation of direct, high speed communications between bit-mapped graphics controllers and intelligent mass storage devices and the MC68000.

The VME/10

8/16/32-Bit Development System



The VME/10 System is a very powerful desktop microcomputer which serves as a target system, but one which, by virtue of its accompanying software and instrumentation, can be used to develop the target programs and to debug the entire system.

The VME/10 Desktop Microcomputer lacks only an accompanying printer to constitute a complete system. A 5¼″ Winchester Disk Drive, a 5¼″ Floppy Disk Drive, a 15″ Video Display and a Detachable Keyboard all are part of the basic system. The accompanying standard software includes the VERSAdos Operating System, an M68000 Macroassembler, a Linkage Editor, CRT Text Editor, as well as a number of Utilities, Debug/Monitor and Diagnostics. For a UNIX Systems environment, the SYSTEM V/68 Operating System is available.

And there are a few desirable options, too. For example, you can buy VME/10 with a 15Mb, or 40Mb Winchester Drive, to fit your specific needs. And you can custom-tailor the system with add-in memory and I/O modules from the VMEmodule and I/O module lines. The inherent 5-slot VMEbus backplane and 4-slot I/O Channel cardcage makes system expansion simple.

While the VME/10 Development System is a powerful tool for the design of your target software, it is also ideal for hardware emulation and system analysis when used as a Host in conjunction with the Bus State Analyzer and HDS-Development Stations. Together, these instruments provide all the essentials for M68000/M6800-based microprocessor system design.

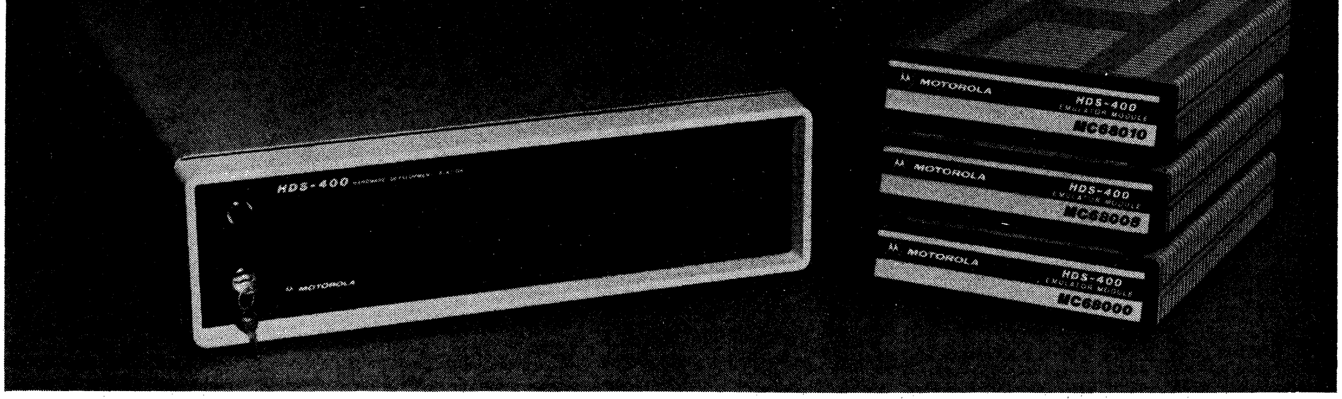
MOTOROLA

HDS-400

For M68000-Based Systems



HDS Development Stations are designed to emulate the target MPU/MCU of systems under development, including the associate ROM/PROMs, until the configuration has been fully proven. This capability allows the software to be fully evaluated and debugged at an early stage in the development process. Then, when debugging is completed, and a hardware prototype has been assembled, the Development Station can be plugged into the target prototype in place of the actual MPU/MCU, allowing a complete evaluation of the total system.

The debug features of the Development Stations are designed to simplify this task substantially. Line-by-line assembly and disassembly permits detailed performance analysis. Sixteen program breakpoints can be placed, temporarily, into the user program to enable rapid isolation of a program fault.

The contents of all registers can be displayed or modified. Mass block memory moves, data updates, and memory scans are among the many operations.

HDS-300

The HDS-300 Microprocessor Hardware/Software Development Station reflects the latest technological advances in microprocessor emulation, analysis, and development support. This powerful system provides development support for a large and growing family of Motorola microprocessors. Specifically, the HDS-300 supports the MC6801/03, MC6809, MC6809E, and MC68HC11 families of microprocessors. Motorola offers alternative development stations for other Motorola microprocessors.

The HDS-300 system, a leader in emulation technology, consists of two modules: the control station, and the emulator module. Together, these modules provide unprecedented real-time emulation support. The HDS-300 is a powerful stand-alone emulation system that requires only the target object file from the host system. The HDS-300 is also sufficiently flexible to allow operation using any standard RS-232C terminal.

In addition to emulation support, the HDS-300 features a "window" capability which enables the user to look into the target system operation to a degree not possible without the emulator. The "window" concept enables the user to examine the target system by starting and stopping target code execution. A variety of stopping conditions may be specified.

The user may examine or alter target memory or processor registers when target execution is stopped. Target code instructions may also be "stepped" through, one execution at a time, to examine execution results. Alternatively, when a stop condition is specified, the processor is instructed to continue running under emulation until the specified condition is reached.

The stop-examine-continue method is an effective tool for hardware and software debugging. It provides an efficient and highly effective way of isolating and resolving problems typical in early system development.

Two major factors contribute to the usefulness of the HDS-300 as a system development tool. One factor is the ability of the HDS-300 to be plugged into a socket on the prototype hardware, thus allowing the development station to serve as a fully functional hardware substitute for the selected MPU in the target system. The second factor is the powerful software analysis capability of the HDS-300 which enables the user to rapidly debug and integrate the target system.

HARDWARE DEVELOPMENT

The HDS-300 is designed to emulate the target MPU until its configuration has been fully proven. This capability allows the hardware and software of the target system to be tested together at an early stage of the development process. Changes to the hardware configuration and associated software can be quickly and easily accomplished and tested. When the debugging tasks have been completed, the HDS-300 will act in place of the target MPU allowing complete evaluation of the system. The HDS-300 also has a clock that can be used until the prototype system clock is operational.

SOFTWARE DEVELOPMENT

The HDS-300 utilizes its software development tools early in the system development process. Original system algorithms and I/O parameters can be tested before writing any

HARDWARE/SOFTWARE — continued
HDS300 — continued

software code. After this phase is completed, a source program is prepared using the host's editing facilities.

The source program is compiled or assembled and the software modules are linked together in the host loader. The host translates the software into Motorola's modular "S" record format and downloads the program into the HDS-300. The development station is then prepared to act as a substitute for the target system.

The single-line assembler/disassembler permits the HDS-300 user to make minor software patches independently of host re-assembly. The latest target software image can be stored on the HDS-300's 5¼ inch floppy disk to permit fast reloads, increased stand-alone independence, and reduced debug time.

When system prototype hardware development is completed, user programs can be thoroughly inspected and modified as required.

EMULATION MEMORY

The HDS-300 contains emulation memory which can be used to replace target memory. Assignment of emulation memory to the target memory map (in blocks) is specified by the user. The HDS-300 offers 32Kb of emulation RAM in the standard product. An optional Emulator Memory Module may be added to increase emulation memory to 64Kb, 128Kb, or 256Kb.

In the process of "mapping" memory, the user may also designate blocks of contiguous memory as "write-protected." This feature allows the user to detect forbidden "writes" to memory locations which will occupy ROM or EPROM in the final target configuration.

BUS ANALYZER

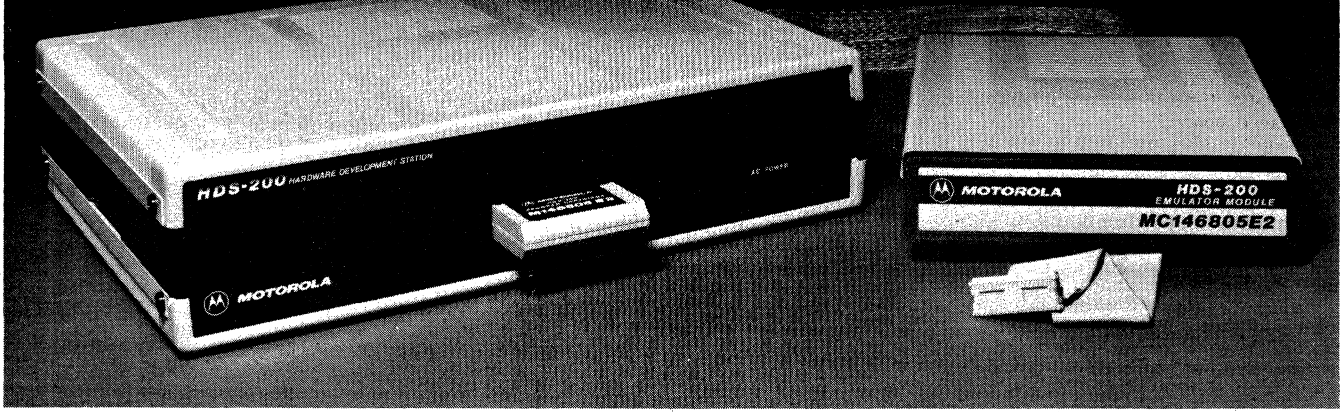
In addition to emulation, the HDS-300 user often needs the capability of the Bus State Monitor to record or "trace" activity on the executing target processor bus. This information is consequently used for analysis. The bus analyzer function may be extended to provide triggering capability based on user-selected conditions (or events) on the processor bus. Both hardware and software faults may be quickly isolated using the analyzer.

Triggering by the analyzer is flexible. The trigger may:

- Initiate or Terminate a Bus Activity Trace
- Cause Emulation to Stop
- Provide a Single to an External Instrument

Development Stations

HDS-200
For M6804/5-Based Systems



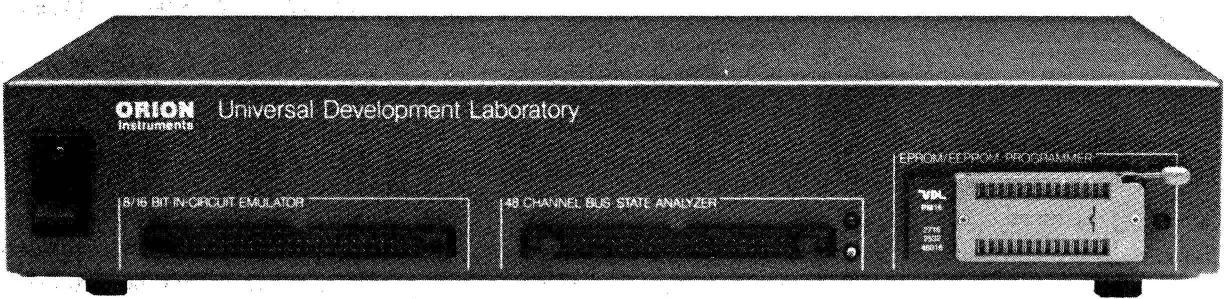
The HDS Development Stations consist of two separate entities — a Control Station and an Emulator Module. The Control Station contains an appropriate MPU (MC68000 for the HDS-400; MC6809 for the HDS-200) and the memory and logic functions necessary to exercise program control. The Emulator Module contains the specific MPU/MCU which the station is to emulate, together with supporting circuitry. Hence, there is a different Emulator Module for each of the MPU/MCUs which the system is intended to emulate.

In operation, the connector emanating from the Emulator Module plugs into the socket of the target system's MPU/MCU from which the actual target MPU/MCU has been removed. Thus, the full debugging power of the Development Station is inserted into the target system — without any change in the actual operation of the target.

The HDS-400, with the appropriate interface hardware and software options can operate in conjunction with the VME/10, EXORmacs or DEC VAX acting as a Host computer. The HDS-200 operates in conjunction with the VME/10, EXORmacs, EXORset or EXORciser as Host. The function of the Host is to download the functional program into the HDS-system. Thereafter, the HDS-400 system can operate independently of the Host to accomplish its debugging activities — thus freeing the Host for additional development tasks. The HDS-200 requires continuous involvement of the Host during the debugging process.

The appropriate component complements for the various target MPU/MCUs and the desired Host are detailed in the accompanying tables.

Integrated Analyzer, Emulator, Programmer



ORION Instruments
Universal Development Laboratory
8/16 BIT IN-CIRCUIT EMULATOR
48 CHANNEL BUS STATE ANALYZER
EPROM/EEPROM PROGRAMMER
UDL
PM16
2716
2532
48016

Host Computer Interface

RS-232C connector, 19,200 or 9,600 baud, switch selectable.

Diskette Formats

CP/M 8″ IBM format, many 5¼″ formats
IBM PC 5¼″, MS-DOS
ISIS
Apple CP/M, 80 col

Emulator

Download time: 1 second for 2K bytes including 16-bit block error check. (2 sec on some systems)
195 ns max access time ROM emulation. (145 ns optional.)
32K × 8-bit or 16K × 16-bit standard. By cable, program option.
Expandable to 128K bytes with optional plug-in board.
20-bit enable address decoding.
Individual 2k segments can be selected in any combination within 17-bit field.
Stand-alone operation possible as a ROM emulator.
16-bit Idle register loops target CPU allowing loading of emulation RAM and resumption of program execution.
Optional, target-processor-specific, software gives full debug capability including register and target memory display and change, breakpoints, and single stepping.
Program loading software: from hex or binary disk files, hex serial download, memory image, ROM read.

Bus-State Analyzer

48 data inputs. Two groups of 8 can be separately clocked.
6 clock signal inputs. Gated to form one bus clock:
  Clock edge filter prevents re-trigger before 100 ns.
  395 ns minimum bus cycle (10 MHz 68000)
  297 ns with optional high-speed option.
Address demultiplexing latches included—also used by emulator
170 cycle × 48 bit Trace memory

EPROM/EEPROM Programmer

Smart programming algorithm for high speed.
28-pin Textool zero insertion force socket handles 24 and 28 pin devices.
Programs single supply EPROMs and EEPROMS.
One personality module handles 2716, TMS2516, 2532, 48016.
Personality modules for 2732A, 2764/128, 2764A/128A/256 also included.
Optional module available for 27512.

Signal Inputs

TTL logic levels. (74ALS inputs)
.1 ma maximum loading includes emulator & analyzer.

Analyzer Trigger

4-step sequential trigger
RAM truth tables allow search for *any* function of 8-bits at each 8-bit group, for each step.
8 truth tables per step × 4 steps = 32 256-bit tables
16-bit inside/outside range detection on address lines
4-bit segment enable gives 20-bit address capability.
Pass Counter: wait up to 65,382 events or cycles before 4th step.
Before/After/At Pass count trigger enable.
Delay Counter: wait up to 65,382 events or cycles to stop trace.
Filter feature. Records only cycles which satisfy trigger criterion plus 0-3 cycles after each qualified cycle.
Oscilloscope sync output. (Sync on trigger.)
Interrupt output: Interrupt target on trigger (if enabled)
LED indicates searching for trigger. Stand-alone operation possible while waiting for trigger.

Software Features

Command driven with single context for all 4 instruments.
Extensive macro capability
On-line Help screens.
Menu driven shell generates command lines.
User definable function keys.
Calculator, ASCII table, IC pinout library, memo pad, terminal emulation, and DOS access.

Signal Outputs

TTL logic levels (74LS244 outputs)
100 ohms forward terminating resistors on Emulator data lines.
Reset output: open collector, 7406 thru 47 ohms.
Interrupt output: open collector, 7406, low true.
9 Stimulus outputs (at EPROM socket) (8255 NMOS outputs).

Physical

Size: 2.1″ hi × 13″ wide × 7.8″ deep.
Weight: 4 lbs. (11 lbs. shipping weight)
Fits easily in a slim-line brief case.

Power

100 KHz switching supply
  110v ± 10% 50/60 Hz 15 Watts (standard)
  220v ± 10% 50/60 Hz 15 Watts (optional)

Accessories Included

UDL User's Manual
Personality Module for 2716, 2758, 2516, 2532 EPROMs and 48016 EEPROMs, 2732A module, 2764/128 module, 27256/2764A/27128A personality module.
1-ROM Emulator cable 8-bit, 24-pin version unless otherwise specified.
1-Analyzer cable pre-configured for your targe processor
1-Jumper wiring tool (3M)
1-40-pin IC clip
1-16-pin IC clip
1-RS-232 cable, 10-ft. retractile (coiled cord)
1-Input stimulus cable
2-Component clip adaptor probes
1-System Control Program Diskette

INTRODUCTION TO MICROCOMPUTER BOARDS

In this section single and multiple board microcomputers are arranged in alphanumeric sequence by data word size, bus type and, within that grouping, according to the microprocessor on which they are based, and then, in order of increasing CPU clock frequency.
Microcomputer support boards are listed after the CPU boards. Support boards are grouped according to the supported system or bus, and then alphabetically by manufacturer.

Detailed Product Information provided by:

Fairchild	2101
Fujitsu America	2102
Motorola Semiconductor	2108
Wintek	2118

The manufacturers listed above have provided detailed information on their latest and most significant products.

EINFÜHRUNG MIKROCOMPUTER-PLATINEN

In deisem Abschnitt finden Sie Einplatinen- und Mehrplatinen-Mikrocomputer in der Reihenfolge ihrer Wortgröβe und, innerhalb dieser Gruppierung, in der Reihenfolge der Mikroprozessoren, auf denen sie basieren. Hardware und Software-Unterstützung ist für jede verfügbare Platine aufgelistet.

Neu in diesem Jahr ist ein weiterer Selection Guide für Mikrocomputer-Zusatzplatinen. Die Platinen sind nach den unterstützten Computersystemen geordnet.

INTRODUCTION AUX MICRO-ORDINATEURS SUR CIRCUITS IMPRIMES

Dans cette Section les micro-ordinateurs à circuits imprimés simples ou multiples sont regroupés suivant la taille du "mot de données", et, à l'interieur de chaque groupe, suivant le type de microprocesseur sur lequel, ils sont basés. Les supports hardware et software sont indiqués pour chaque circuit.

Une nouveauté cette année : l'existence d'un Guide de Sélection supplémentaire pour les circuits supports pour micro-ordinateurs. Les circuits sont regroupés d'après les systèmes ordinateurs utilisés.

INTRODUCCIÓN A MICROCOMPUTADORAS DE TABLEROS DE CIRCUITOS IMPRESOS MÚLTIPLES

En esta sección microcomputadoras de tablero individual o múltiple están agrupadas en secuencia de acuerdo al tamaño de palabra para datos y, dentro de ese grupo, por medio del microprocesor en el cual están basados. Apoyo por medio de equipos y programas aparecén para cada tablero de circuitos impresos.

Nueva para este año es la guía de selección suplementaira para suporte de tableros de microcomputadoras. Estos tableros están agrupados de acuerdo al sistema de computadora al que sostienen.

マイクロコンピューターボード への案内

このセクションでは単数，複数ボードコンピューターがデータ，ワードサイズによってグループにまとめられ，そのグループ中ボードコンピューターの基になっているマイクロプロセサ順に記載されています。ハードウエア，ソフトウエア共各ボード毎にのせてあります。本年新たに加わったのはコンピューターサポートボード用の補足セレクションガイドでボードはコンピューターシステム毎にグループになっています。

MASTER SELECTION GUIDE

Software Support					Hardware Support	Comments	Model	Source	Line
Assembler	Debug/ Monitor	Editor	High Level Language	Operating System					
				x	x	Uses M-60 Multiprocessing expansion bus.	DPC-183	ACE	
x	x	x		x	x	Expandable, IEEE-488 capability, timer, memory-mapped I/O, with most microcomputers, can be used as a development system with in-circuit emulation.	SBC6511	ConnMicro	
	x	x	x		x	Similar to MC-1N, extra RAM, EPROM, and I/O, control basic (2K).	MC-1Z	Basicon	
x	x	x	x	x	x	Three 8-bit output ports, two 8-bit input ports.	MD-SBC1	Mostek	5
					x	Cassette interface, battery-packed clock-calendar chip, dip switches, low-cost controller board.	SBS-80	SingleBoard	
x	x	x	x	x	x	8", 5 1/2" and 3 1/2" floppy controller	DSB-4042	Davidge	
x	x	x	x	x	x	8", 5 1/2" and 3 1/2" floppy controller	DSB-4044	Davidge	
x	x	x	x	x	x	8", 5 1/2" and 3 1/2" floppy controller	DSB-4062	Davidge	
x	x	x	x	x	x	8", 5 1/2" and 3 1/2" floppy controller	DSB-4064	Davidge	10
x	x	x	x	x	x	50 pin expansion, 8", 5 1/2" and 3 1/2" floppy controller	DSB-6064	Davidge	
x	x	x	x	x	x	50 pin expansion, 8", 5 1/2" and 3 1/2" floppy controller	DSB-6128	Davidge	
x	x	x	x	x	x	50 pin expansion, 8", 5 1/2" and 3 1/2" floppy controller	DSB-6256	Davidge	
						Complete datalogger with A to D and Basic operating system	TATTLETALE II	Onset	
x	x	x	x	x	x	Includes 12 bit A/D, instrumentation, amp and 16-channel multiplexer.	IDAM	Golden	15
						Crystal-controlled clock	Cortex8220R	Cortex	
				x	x	4 NMI lines, all gated. Two 7805 voltage regulators on board. 555 power-on start-up.	Cortex8268K	Cortex	
x	x		x	x	x	See Superboard II. Nine-digit disk extended Basic and software I/O distribution. RS-232 or cassette interface.	CIPMF	OhioSci	
x	x	x			x	Accepts 9-18V ac or dc. With MMC-ACIA adaptor accepts 6551 ACIA (19.2 baud). ICE in-circuit emulator permits program development with any 6502-based system.	MMC/03	Brachman	
x	x	x		x	x	RS-232 with CmCnet. Expandable, with most microprocomputers, can be used as a development system with in-circuit emulation.	SBC6511-KA	ConnMicro	20
x	x	x		x	x	IEEE-488 interface. Exandable. Can be used as a controller. With most microcomputers, can be used as a development system with in-circuit emulation.	SBC6511-KB	ConnMicro	
x			x	x		A single board system with 86x25 display, keyboard, floppy printer.	DT6000	AppBusComp	
	x	x	x		x	Similar to MC-1Z except with a full 8K basic.	MC-11	Basicon	
						Four-level vectored interrupt, Multimaster control, programmable 14-bit binary timer, optional RS232C port.	80/04	MicroInds	
	x				x	Stand-alone single-board computer with prototyping area, SBC 80/24 compatible, 2iSBX connectors, CMOS RAM with battery backup.	Multiboard-85	MicroDesigns	25
	x	x	x	x	x	Industrial development and control system with on board EPROM programmer, BASIC and FORTH in firmware.	ipc-SBC88-1	Vesta	
	x	x	x	x	x	Industrial development and control system with on board EPROM programmer, BASIC and FORTH in firmware.	ipc-SBC88-2	Vesta	
x	x	x	x	x	x	Software compatible with AIM-65.	6500	Cubit	
x	x		x	x	x	Digital remote controller board, BITBUS interface plus 24 lines digital I/O, SBX connector for expansion, distributed control applications.	IRCB44/10	Intel	
x	x		x	x	x	Intelligent multimodule board, interface from SBX-bus to BITBUS with room for user programs to offload the host CPU.	iSBX344	Intel	30
x	x	x	x	x	x	Serial port is programmable to 9600 baud.	**MCL45**	**Wintek (2118)**	
x	x	x	x	x	x	Serial port is programmable to 9600 baud. Single 5V supply.	**MCV45**	**Wintek (2118)**	
x	x		x		x	On-board real-time clock interrupt, power-on reset and watchdog timer circuit.	**MCH18**	**Wintek (2118)**	
x	x		x		x	Watchdog timer, real-time clock	**MCH38**	**Wintek (2118)**	
x	x		x		x	Watchdog timer, real-time clock	**MCH68**	**Wintek (2118)**	35
x	x	x	x		x	Socket for EPROM, 1 K to 4 Kbytes	**MCL10**	**Wintek (2118)**	
x	x	x	x	x	x	Three real-time clocks, 28 interrupt sources, optional hardware math package. System is designed for process-control applications.	3885-Z1C	KineticSys	
x	x	x	x	x	x	On-board vectored interrupt controller and memory-mapped I/O.	1080	Cybersys

Software Support									
Assembler	Debug/ Monitor	Editor	High Level Language	Operating System	Hardware Support	Comments	Model	Source	Line
x	x	x	x	x	x	On-board vectored interrupt controller and memory-mapped I/O.	1012	Cybersys	
x	x	x	x	x	x	CPU card, 2 or 4 MHz clock is switch-selectable.	1085	Cybersys	
	x				x	18-bit timer, on-board clock, voltage regulator, 5 interrupts, 27C16 EPROM.	CPU-800A	Onset	
						Two 16-bit timers, real-time clock, switching voltage regulator, 5 interrupts.	CPU-801	Onset	
	x				x	Eight analog input lines, real-time clock, voltage regulator, 27C16 EPROM, 256-bit EEPROM.	CPU-6805A	Onset	5
	x				x	2mA low power mode	CPU-8085	Onset	
	x					100NA low power mode	CPU-8088	Onset	
			x	x		Single-board FORTH microcomputer.	TDS900	Stynetic	
x	x	x	x	x	x	PAL, Generated memory map using 8K and 16K static RAMS and 8K through 64K EPROMS.	9641	CreMicro	
x	x	x	x	x	x	Interchangeable 6502/6802/6809/Z80 CPUs. GPIB, ACIA, printer ports, VUA, VXA, VMA and bootstrapping.	GMS6527	GenMicro	10
x	x	x	x	x	x	Basic, assembler, forth, PL65, real clock, CMOS battery for all RAM.	ASBC-65-64	AppBusComp	
x	x	x	x	x	x	Basic, assembler, forth, PL65, CMOS battery for RAM.	ASBC-65-8	AppBusComp	
x	x	x	x	x	x	Interchangeable 6502/6802/6809/Z80 CPUs. GPIB, ACIA, printer ports, VUA, VXA, VMA and bootstrapping.	GMS6506	GenMicro	
x	x	x	x	x	x	Crystal-controlled clock, interrupt, DMA, power-on reset, buffered bus, 3 PIAs.	M68MM01	Motorola	
x	x	x	x	x	x	Crystal-controlled clock, interrupt, DMA, power-on reset, buffered bus, 2 PIAs.	M68MM01A2	Motorola	15
x	x	x	x	x	x	Three 16-bit timers, parallel printer I/O interface, buffered bus, 5 sockets for 2K EPROM, ROM or RAM.	M68MM01D	Motorola	
x	x	x	x	x	x	Forty I/O lines, 20 buffered. Can also use 8-bit 6502, 6802, 6809, and Z80 CPUs. GPIB Talker/ Listener/Controller port.	GMS6507	GenMicro	
x	x			x	x	ACIA (RS-232C) and on-chip SCI (RS-232C and 2DmA current loop. Two multitasking kernels. Designed for RUT applications.	MBK6801	MRCSys	
x	x	x	x	x	x	Three 16-bit timers, programmable baud rate.	M68MM01B	Motorola	
x	x	x	x	x	x	Audio cassette interface, dynamic RAM refresh, buffered bus, 3 16-bit timers.	M68MM01B1A	Motorola	20
x	x	x	x	x	x	Interchangeable 6502/6802/6809/Z80 CPUs. GPIB, ACIA, printer ports, VUA, VXA, VMA and bootstrapping.	GMS6525	GenMicro	
x	x	x	x	x	x	Can use RAM in ROM sockets.	M68MM17	Motorola	
x	x	x	x	x	x	Three 16-bit timers, DMA buffered bus.	M68MM19	Motorola	
	x			x	x	Resident monitor. Has 2 kbytes of nonvolatile RAM with space for RAM or ROM expansion.	9619	CreMicro	
x	x	x	x	x	x	Designed for use with OS-9 operating system. Real time interrupt PTM on-board.	9639	CreMicro	25
x	x	x	x	x	x	Three 16-bit timers, DMA buffered bus.	M68MM19A	Motorola	
x	x	x	x	x	x	Interchangeable 6502/6802/6809/Z80 CPUs. GPIB, ACIA, printer ports, VUA, VXA, VMA and bootstrapping.	GMS6526	GenMicro	
	x				x	ACIA, PIA, bit-rate generator, interrupt vector generator, power-failure protect restart triple programmable timers.	9600A	CreMicro	
	x				x	ACIA, PIA, bit-rate generator, interrupt vector generator, power failure protect restart, hardware compatible with CMS 9600A.	9609	CreMicro	
x	x		x	x	x	RS-232, on-board battery	1806A	Xycom	30
x	x		x	x	x	RS-232, on-board battery	1810Z	Xycom	
x	x	x	x	x	x	High-speed hardware floating point math optional 1862A. Master/slave mode capability for multiprocessor applications. Supports digital, analog systems.	1862+A	Xycom	
				x		Also operates with TI Professional compater.	FG-114	Microlog	
						Videotex adapter.	FG-117	Microlog	
				x		CP/M Co-processor.	FG-100A	Microlog	35
				x		CP/M Co-processor, real time clock/calendar. Also operates with TI Professional computer.	FG-119	Microlog	
			x	x	x	Three timer channels, 8 levels of interrupts, supports MS-DOS, CP/M86 and concurrent CP/M.	FE6400	Faraday	
			x	x	x	On-board floppy disk controller and monochrome display controller, supports MS-DOS, CP/M86 and CP/M.	FE6410	Faraday	
			x		x	Expansion capability without backplane.	MCS80-0013	Bedford	
			x		x	Flexible packaging and cabling.	MCS	Bedford	40

x	x	x	x	x	x	Floppy controller, streaming tape interface, hard-disk interface, DMA, IEEE-488 controller.	MLZ-90	Heurikon	
x	x	x	x	x	x	Software-programmable dual baud-rate generator, 4 counter-timers, 12-bit analog input channels.	MLZ-DAQ	Heurikon	
x	x	x	x	x	x	Replaces 8080 CPU board in Intellec 800, 888. Supports all Z80 software and architectural features. ISIS-11 compatible.	Z80SAM	RELMS	
x	x		x	x	x	Intended as supervisor for Multibus system.	RSBC-Z80/32	RELMS	20
x	x	x		x	x	Floppy controller, streaming-tape interface, hard-disk interface.	MLZ-91A	Heurikon	
x	x	x		x	x	Floppy controller, streaming-tape interface, hard-disk interface, DMA, Multimaster capability.	MLZ-92A	Heurikon	
x	x	x	x	x	x	DMA, modem and SDLC/HDLC signals.	MLZ-93	Heurikon	
x	x	x	x	x	x	High-speed math processor, 16-level interrupt controller, 6 counter/timers, Multimaster bus arbitration logic, accepts floating-point processors.	ZBC-80	Matrox	
			x	x	x	On-card video graphics controller	MLZ-VDC	Heurikon	25
x	x	x	x	x	x	Floppy disk controller hard disk interface Multimaster capability, math processor interrupt controller, 3 counter/timers.	SBC-90A	InnovRes	
	x					Programmable baud rate generator, two on-board iSBX expansion sockets, on-board memory and I/O management.	PBC-80	Matrox	
x						High-memory industrial controller or low-end computer board.	MSC8001	MonSys	
x						Multimaster logic, PROM memory maps, math chip for floating-point processing.	MSC8004	MonSys	
						Optional on-board arithmetic processing unit	MSC8004A	MonSys	30
x						Multimaster logic and optional APU, single/dual address maps available with custom RAM/ROM and I/O mapping.	MSC8007/A	MonSys	
x	x		x	x	x	Intended as superviser for multiprocessor system. Communications options.	RSBC-Z80SP	RELMS	
						Optional on-board APU, individual board reset	MSC8014	MonSys	
						Optional on-board APU, individual board reset	MSC8017	MonSys	
x	x	x	x			Programs 2716, 38E70. Emulates 3870 family, cross-assembler for 8080- and 6800-based systems. On-board keyboard and display.	F68-PEP	Fairchild	35
x	x	x	x	x	x	ROM, RAM, on-board I/O and off-board I/O addresses are user defineable, 3 16-bit timers, 8 levels of vectored, maskable interrupts.	OB6000	Omnibyte

Software Support									
Assembler	Debug/ Monitor	Editor	High Level Language	Operating System	Hardware Support	Comments	Model	Source	Line
						CMOS replacement for iSBX 88/25, 0-70°C and -40 to 70°C versions available, on-board battery-backed RAM	CBC88C/25	DiversTech	
x	x	x	x	x	x	Nine DMA channels, 64 Kbytes DRAM expandable to 192 Kbytes, 2 iSBX expansion connectors, RS232C on 6 channels.	iSBC188/48	Intel	
x	x	x	x	x	x	Sockets for interchangeable line drivers and terminators, programmable communications interface, single-level interrupt.	iSBC80/10B	Intel	
x	x	x	x	x	x	48 individually programmable parallel I/O lines. Available built to MIL883 Standard.	DCS8010A	DistComp	
x	x	x	x	x	x	For severe environmental operation conditions: -55°C to 85°C, 5 G vibration — 5 Hz to 2 kHz, 15 G shock — 11 ms, 0 to 95% humidity.	SECS80/10A	EMM-SESCO	5
x	x	x	x	x	x	Sockets for 8041/8741A interface, 12 levels of programmable interrupt control, RAM battery backup, Multimaster control.	iSBC80/30	Intel	
x	x	x	x		x	Two programmable 16-bit BCD and binary timers, eight-level programmable interrupt control, memory protected.	iSBC80/24	Intel	
x	x					Has both 8085 and 8088 processors, only one of which operates at a time. Optional battery-backed calendar clock, math chip.	8108	ETIMicro	
x	x	x	x	x	x	Includes CRT display controller and ASCII keyboard input port.	MC85	Comark	
x	x	x	x	x	x	Same as MC85-001 but also has 80x24 display controller and ASCII keyboard port	MC85-001	Comark	10
x	x	x	x	x	x	Real-time clock, parallel/serial bus arbitration	MC85-005	Comark	
					x	Accepts low-level signal down to 10 mV.	DT3754	DataTrans	
x	x		x	x		Seven CPU boards in series. DS board has math processor and 12 interrupt inputs.	AMSSeries	Siemens	
					x	For severe environmental operation conditions: -55°C to 85°C, 5 G vibration — 5 Hz to 2 kHz, 15 G shock — 11 ms, 0 to 95% humidity.	SECS80/30	EMM-SESCO	
					x	Has both 8085 and 8088 processors, only one of which operates at a time. Optional battery-backed calendar clock, math chip.	SECS80/544	EMM-SESCO	15
x	x	x	x	x	x	Four-channel communications computer or intelligent slave for communications expansion. Twelve levels of programmable interrupt control.	iSBC544	Intel	
x	x	x	x	x	x	Three sockets for distributed digital I/O processing, 12 levels of programmable interrupts, three programmable counters.	iSBC569	Intel	
x	x	x	x	x	x	Software-transparent to Intel SBL90/05, has three SBX connectors, fast-mode selection for CPU clock, needs ± 12V for RS-232.	ZX80/15	Zendex	
x	x	x	x	x	x	Hardware and software-compatible with Intel Series II IPC-85. Runs all development systems.	ZX85	Zendex	
x	x	x	x	x	x	Wire-wrappable kluge card in Multibus form-factor, except double height. Four 28-pin RAM/ROM sockets.	DCS-IWW/88	DistComp	20
	x			x	x	Intelligent communications controller. Can run an operating system for development of communications protocol.	DCS-SI08	DistComp	
x	x	x	x	x		See iSBC86/14. ROM/PROM expandable to 64K bytes with iSBC 341 Multimodule.	iSBC88/25	Intel	
x	x	x	x	x	x	Measurement and control computer. On-board A/D converter, 3 iSBX connectors, 3 programmable timers, 4 EPROM sockets.	iSBC88/40	Intel	
						12-bit 20KHz A to D converter with programmable gain, 16-different 1/32 single-ended analog, input channels, on-board 21V power supply for E² PROM modification.	88/40	MicroInds	
x	x	x	x	x	x	RAM, ROM, PROM sockets, wire-wrappable kluge card in multibus form factor, except double height.	DCS/IWW/8B	DistComp	25
	x			x	x	Intelligent communications controller. Can run an operating system for development of communications protocol.	DCS/SI08	DistComp	
x	x	x	x	x	x	Intended as coprocessor for DCS 86/16 or as 8-bit processor for Multibus systems. Three timers.	DCS86/8	DistComp	
x	x	x	x	x	x	Convertible to ZX-85. Runs CP/M-86.	ZX88	Zendex	
x	x	x	x		x	Hardware/software system designed for use as a remote unit for distributed data acquisition and control.	**MCC14**	**Wintek (2118)**	
x	x	x	x	x	x	Wire-Wrap area, FORTH or PASCAL.	BRICK-1	DYSYS	30
x	x	x	x	x	x	FORTH or PASCAL, real-time multitask operating system (optional).	BRICK-2	DYSYS	
x	x	x	x	x	x	FORTH or PASCAL, real-time multitask operating system (optional).	BRICK-3	DYSYS	
	x	x			x	One-megabyte address capability, memory-mapping RAM, byte-wide memory, on-card floppy disk interface, arithmetic processor and DMA.	DCM-1	Fairchild

Software Support									
Assembler	Debug/ Monitor	Editor	High Level Language	Operating System	Hardware Support	Comments	Model	Source	Line
	x		x			Tiny BASIC/monitor debugger, 2 counter/timers, buffered expansion bus.	SIBEC-51B	BinaryTech	
	x		x			Tiny BASIC/monitor debugger, 2 counter/timers, buffered expansion bus, 2K EEPROM.	SIBEC-51C	BinaryTech	
	x		x			Tiny BASIC/monitor debugger, 2 counter/timers, buffered expansion bus.	SIBEC-51A	BinaryTech	
x	x	x				Based on the 8031 (ROMless 8051). Serial Port RS-232C buffered.	FX-31	AllenSys	
	x		x			Tiny BASIC/monitor debugger, 2 counter/timers, buffered expansion bus.	SIBEC-52B	BinaryTech	5
	x		x			Tiny BASIC/monitor debugger, 2 counter/timers, buffered expansion bus, 2K EEPROM.	SIBEC-52C	BinaryTech	
	x		x			Tiny BASIC/monitor debugger, 2 counter/timers, buffered expansion bus.	SIBEC-52A	BinaryTech	
						Eight Analog inputs, 14 bit counter/timer.	SCMT-11	Solarcom	
	x					256 bytes of CMOS RAM battery backup. SMP-80 is Eurocard version.	SKC-85	Siemens	
					x	Milertronics will do programming and interfacing, if desired.	PDC-102	MilerTron	10
x	x	x	x	x	x	Allows DEC LSI-11 and PDP-11 (QBus) computers to execute CP/M-80 programs from any terminal on the DEC system. RS232C serial port includes a control program resident to the native DEC operating system to handle I/O request	QCP-11	Logicraft	
x	x	x	x	x	x	Supported by Rockwell's development systems. Higher level languages include BASIC, FORTH, PLM.	GE65C02	Golden	
x	x	x	x		x	Industrial, laboratory, and test equipment applications. Graphics printer and display module available.	A65/40-1000	Rockwell	
x	x	x	x	x		On-board floppy controller, mounts directly on 5 1/4-inch floppy, CP/M included.	Little Board	Ampro	
x	x	x	x	x	x	Same as Model 1A but with SCSI bus interface for multi-master I/O expansion and hard disk support.	Little Board/ PLUS	Ampro	15
x	x	x	x	x	x	Same size as 5 1/4 inch floppy drive. Mounts directly on it.	LittleBoard/80	Ampro	
x	x	x	x	x	x	Stand-alone single board computer.	SL188	Slicer	
	x			x	x	STD/Z80 Compatible Timing	CMOS-CPU	Intelicom	
					x	Slave processor for STD. Bus. Z80 code compatible. Has I/O plug-in socket for specific I/O requirements.	SB8275	MicroSys	
x	x	x	x	x	x	Battery backed up calendar clock, watchdog timer, three 16-bit counter/timers and three 28-pin memory sockets.	LPM-CPU3-2	WinSystems	20
	x				x	On-board DART, CTC and PIO, selectable baud rates, 4 counter/timers.	MS1002	Eltec	
			x	x		Parallel port with Z80 PIO FIG-FORTH Monitor.	MIE-300	Mitchell	
			x	x		On board IEEE 488 controller, talker, listener, FIG-FORTH monitor.	MIE200	Mitchell	
x	x	x	x	x	x	Triple DART, RS-232	05324-01	STDMicro	
x	x	x	x	x	x	Triple SIO, RS-232	05324-11A	STDMicro	25
	x					Programmable wait-state generator, 4 counter timer channels.	DSTD-101	DY-4	
	x					Programmable wait-state generator daisy chain interrupt capability 4 independent programmable interval timers.	DSTD-102	DY-4	
	x					Programmable wait-state generator, 4 buffered counter timer channels, slave operation.	DSTD-103	DY-4	
x	x	x	x	x	x		05310	STDMicro	
x	x	x	x	x	x		05320	STDMicro	30
x	x	x	x	x	x	PIO with serial SBC	05323	STDMicro	
x	x	x	x	x	x		05321	STDMicro	
x	x	x	x	x	x	Centronics port	05322	STDMicro	
x	x	x	x	x	x	DMA with RS-232	05326	STDMicro	
	x			x	x	Two I/O ports are occupied by on-board functions, one of which is a DMA controller.	ST4101	Burr-Brown	35
	x				x	On-board DART, CTC and PIO, selectable baud rates, 4 counter/timers.	MS1004	Eltec	
x	x	x	x	x	x	Single board controller	MF80	Matrix	
x	x	x	x	x	x	Triple DART, RS-232	05324-02/3	STDMicro	
x	x	x	x	x	x	Triple SIO, RS-232	05324-12/13A	STDMicro	
	x				x	Optional external clock input. Three state bus drivers may be disabled for DMA observation. Single +5v operation. Addressable expansion to 116 kbytes.	7803A	Pro-Log	40
x	x	x	x	x	x	Four JEDEC memory sockets, serial port, 4-channel counter/timer.	SB8010	MicroSys	

Bold face indicates additional data is provided on the page noted.

					x	10 msec. timer w/ interrupt control. DMA control to external memory. Dynamic RAM refresh clock. Single +5v operation.	7889	Pro-Log	
x	x		x	x	x	Mixed RAM, ROM sockets 1 serial port, 2 parallel ports and 4 timers. Power fail interrupt and memory protection circuitry allow CMOS RAM to be battery backed.	10809	Enterprise	10
						Single board controller	CP701	Matrix	
x	x				x	CMOS 8088 card, two RS-232 or opto isolated 20 mA serial ports, three 16-bit counter/timers.	LPM-8088-5	WinSystems	
x	x	x	x	x	x	CMOS, four 28-pin bytewide sockets. Equivalent to Pro-Log 78C05 and 78C15 processors.	LPM-7815	WinSystems	
						Eight analog inputs, 14-bit counter/timer.	SCMT-85-C	Solarcom	
	x				x	2 DMA on-board	ZT8814/8815	Ziatech	15
	x				x	Complete STD system with 8085, 2-RS-232C, GPIB controller	ZT7805	Ziatech	
x	x	x	x		x	Memory and peripheral I/O cards are available for systems.	ACS/80	ApplSys	
x	x		x		x	Optional external clock input. Tri-State bus drivers may be disabled for DMA operation. Addressabel words expandable to 116K bytes.	7801	Pro-Log	
	x				x	10 msec. timer w/ interrupt control. Control port for memory expansion. RS232C interface for CRT terminal. Selectable DTE/DCE configuration.	7885	Pro-Log	
						Supports memory battery backup.	SCMT-88	Solarcom	20
x	x				x	Two 20-mA opto-isolated or RS-232 serial channels with modem controls, three counter/timers plus interrupt controller.	MCM-8088-5	WinSystems	
	x				x	Compatible with the 8087 numeric data processor, optional debugging monitor PROM.	ZT8806	Ziatech	
	x				x	Optional development monitor, 8087 numeric data processor and 8-MHz version.	ZT8810	Ziatech	
	x					Transparent dynamic ram refresh, 2 independently controlled baud rate generators, software controlled shadow memory.	DSTD-187	DY-4	
	x					8087 math co-processor socket, transparent dynamic ram, refresh, software controlled shadow memory.	DSTD-188	DY-4	25
x	x		x	x	x	8088, optional 8087, serial, parallel, timer, interrupt I/O, Link to IBM-PC.	SB8088	MicroSys	
	x			x	x	Integrated 8088 Processor. Optional development/monitor PROM, optional 8087 numeric data processor, optional IRMX-86 or CP/M-86 silicon operating system.	ZT8812/8813	Ziatech	
	x				x	Intelligent OEM Serial Controller. On-board 8MHz 8088 slave CPU, serial port for RS-232C or RS-449, multimodule expansion socket.	ZT8830	Ziatech	
	x				x	On-board 8-MHz 8088 slave CPU	ZT8831	Ziatech	
x	x	x	x	x	x	STD bus form factor, 8 byte-wide sockets, CTC, SCSI (full ANSC X3T9.2), STD interrupt structure	SCSI/IOP-STD	Ampro	30
x	x	x	x	x	x	Uses Hitachi 68201 (Z-80-equivalent) processor; 4 serial I/O channels, Two 16-bit timers, watchdog timer, three 28-pin sockets, DMA	MCM-SBC5	WinSystems	
						Eight Analog inputs, 14 bit counter/timer.	SCMT-85	Solarcom	
x	x	x	x	x	x	Four 28-pin bytewide sockets. Equivalent to the Pro-log 7805 and 7815 processors.	MCM-7815	WinSystems	
x	x	x	x	x	x	Six 24 pin sockets, four cascadable counter/timer channels, automatic, transparent dynamic memory refresh.	MDX-CPU2A	Mostek	
x	x	x	x	x	x	Flexible memory decoding for EPROM and RAM, four counter/timer channels. CPU1A allows system reset to be generated off the board.	MDX-CPU1	Mostek	35
						On-board CTC.	5320	STDMicro	
						General-purpose parallel interface, programmable baud rate.	5323	STDMicro	
						Three synchronous/asynchronous serial channels, programmable baud rate.	5324	STDMicro

MASTER SELECTION GUIDE

Software Support										
Assembler	Debug/ Monitor	Editor	High Level Language	Operating System	Hardware Support	Comments	Model	Source	Line
						On-board CTC.	5321	STDMicro	
						Centronics interface, programmable baud rate.	5322	STDMicro	
						Clock/calendar, programmable baud rate.	5327	STDMicro	
						IEEE488 GPIB, programmable baud rate.	5328	STDMicro	
						9511 arithmetic processor, 9512 floating-point processor, programmable baud rate.	5329	STDMicro	5
x	x	x	x	x	x	Modem, eight parallel lines plus handshake.	MDX-CPU3	Mostek	
x	x	x	x	x	x	Modem, eight parallel lines plus handshake.	MDX-CPU4	Mostek	
				x	x	Five- and 8-inch floppy disk controller, 64K or 128K of RAM, 2K or 4K of ROM.	Super 6	AdvDigital	
x	x	x	x	x	x	User Board	DPC-88U	ACE	
x	x	x	x	x	x	CPU card.	ZPU	Cromemco	10
x	x	x	x	x	x	Five programmable timers, 110 to 76,800 baud serial port.	SCC	Cromemco	
				x	x		DPC-180	ACE	
				x	x	Designed for integration into a multiprocessor multiuser microprocessor system for low-cost CP/M Plus performance.	DPC-83U	ACE	
x	x	x		x	x	Two-user slave card, each user with his own CPU memory and I/O.	SBC-II	Teletek	
x	x	x		x	x	Able to function as the system controller in a multi-user multi-processing Turbo DOS system.	Systemaster	Teletek	15
x	x	x		x	x	Single-user slave board intended for use in a multi-user multi-processing environment.	SBC-I	Teletek	
x	x	x		x	x	Parallel ports may be converted to IEEE 488 or SCSI interface.	SystemasterII	Teletek	
				x		CP/M Co-processor.	FG-112	Microlog	
x	x	x	x	x	x	Has one or three Z-80-B microprocessors, each having 64K RAM and an RS-232 compatible interface channel. Enables DEC PDP-11 and VAX computers access to CP/M-80. CP/M and DEC programs can run simultaneously.	UCP-11	Logicraft	
						Centronics printer post, 48 KB bank switch up to 16 MB VMEbus memory.	AC-V10	Astraea	20
	x	x	x		x	Low-cost, 3x4-inch board. Includes real time clock/calendar, tiny basic.	MC-1N	Basicon	
	x	x	x		x	Same as MC-1N with extra RAM, EPROM and I/O.	MC-2N	Basicon	
x	x	x	x	x	x	IBM PC/XT compatible, on-board video and floppy controllers, RAM expandable to 640K, 8087 socket	DPC-1064	Davidge	
x	x	x	x	x	x	IBM PC/XT compatible, on-board video and floppy controllers, RAM expandable to 640K, 8087 socket	DPC-112B	Davidge	
x	x	x	x	x	x	IBM PC/XT compatible, on-board, video and floppy controllers, RAM expandable to 640K, 8087 socket	DPC-1256	Davidge	25
	x		x			Sun memory management 8Mb Multibus address space.	B1034	CentData	
x	x	x	x	x	x		iSBC186/03A	Intel	
	x			x		Includes CPU, RAM, serial I/O, ethernet controller and VRTX real-time operating executive.	CP-2000	Matrox	
	x			x		Includes CPU, RAM, serial I/O, Floppy disk controller and VRTX real-time operating executive.	FP-2000	Matrox	
x	x	x	x	x	x	Can contain 128Kb, 512Kb or 1Mb on-board RAM. Optional 8087 floating point processor. Optional multi-protocol dual serial interface controller.	ZX186/30	Zendex	30
x	x	x	x	x	x	Zero-wait-state dual-port memory interface. Reconfigurable to support up to 640 KB EPROM.	iSBC286/10A	Intel	
x	x	x	x	x	x	1 MB, zero-wait-state parity RAM and zero-wait-state memory interface	iSBC286/12	Intel	
x	x	x	x	x	x	Dual processor with 3iSBX connectors.	V8003	Century	
x	x	x	x	x	x	512K byte on-board dual-port RAM.	iSBC86/35	Intel	
x	x	x	x	x	x	Two SBX Connectors; Optional 807 numeric data processor.	CD21/8630	CentData	35
x	x	x	x	x	x	Two SBX Connectors; Optional 8087 numeric data processor.	CD21/8635	CentData	
x	x	x	x	x	x	Two 16-bit SBX connectors, 8087/8089 support	MC8630/35	Comark	
				x	x	Multibus II peripheral controller	iSBC186/224	Intel	
x	x	x	x	x	x	Complete integrated system, maximum baud rate 64 kb/s synchronous, also iLBX-II bus.	SYSMB2	Intel	
x	x	x	x	x	x	Max. baud rate 64 kb/s synchronous, also iLBX-II bus.	iSBC286/100	Intel	40
x	x	x	x		x	Similar to SYS-10A with 2 serial ports. One port has full modem handshake capability.	SYS-11	Octagon	
x	x	x	x		x	Similar to SYS-10A with Battery backable RAM. 8 channels of 8 bit A/D and 1 channel of D/A.	Omnicard	Octagon

MASTER SELECTION GUIDE

Software Support									
Assembler	Debug/ Monitor	Editor	High Level Language	Operating System	Hardware Support	Comments	Model	Source	Line
x	x	x	x	x	x	ROM, RAM, on-board I/O and off-board addresses user defineable. Contains 3 16-bit timers and 7 levels of vectored interrupts.	OB68K1A	Omnibyte	
					x	CMOS, low-power alternative to the 86/05, battery backed-up RAM	CBC86C/05	DiversTech	
					x	CMOS 86/14, battery back-up RAM.	CBC86C/14	DiversTech	
x		x	x	x	x		8186	Intel	
x		x	x	x	x	Memory-intensive-processor board	MSC8186	MonSys	5
x	x	x	x	x	x	Virtual memory support (1Gb), built-in memory management and protection.	DBC286M	Microbar	
x	x	x	x	x	x	For severe environment: operating temperature 55° to 85°C vibration 5g 5 Hz to 1kHz, meets MIL-E5400, 16400, and 4158.	SECS86/05	EMM-SESCO	
				x		Two programmable timers, nine level vectored priority interrupts.	SECS80/86	EMM-SESCO	
x	x	x	x	x	x	Optional 8087 floating-point processor. Optional memory management module.	DBC86	Microbar	
x	x	x	x	x	x	Three timers, interrupt controller, real-time clock. The DCS 86/16 is usable as a stand-alone computer, typically for real-time control, or in a system.	DCS-86/16	DistComp	10
x	x	x	x	x	x	Same as above plus a watchdog timer, 2 iSBX connectors, 10 year battery backup RAM, on board socket for 8087.	DCS-ICB/86	DistComp	
x	x	x	x	x	x	Three timers, interrupt controller, real-time clock. Stand-alone computer, typically used for real-time control or in a system.	DCS/86/16	DistComp	
x	x	x	x	x	x	Two programmable timers, nine-level vectored interrupts, optional 8087 co-processor.	MBC-8b/512B	Matrox	
	x	x		x	x	Numeric coprocessor, 16-bit timer, interrupt control, real-time clock. Augat Holtite zero-profile sockets. Also available in CMOS version.	86/50A	VisionsUnlim	
x	x	x	x	x	x	Two programmable timers, nine-level vectored priority interrupts, ROM/PROM expandable to 64K with iSBC Multi-Module.	iSBC86/05	Intel	15
x	x	x	x	x		Three serial I/O channels. Two allow use of high-level bit protocols.	DCS86/16	DistComp	
x	x	x	x	x	x	Two programmable timers, programmable interrupt controller, ROM/PROM expandable to 32K bytes on board.	MBC-86/12A	Matrox	
x	x	x	x		x		ZX86	Zendex	
x	x	x	x	x	x		iSBC86/14	Intel	
x	x	x	x	x	x		iSBC86/30	Intel	20
x	x	x	x	x	x	Compatible with industry standard 15' x 15' I/O controllers. Up to 8K bytes of program autoload PROMS. Memory control and parity logic.	GLOW-16	Fairchild	
x	x	x	x	x	x		CPU201	TauZero	
x	x	x	x	x	x	Two interval timers.	TM9900/100MA	TI	
x	x	x	x	x	x	Three interval timers.	TM9900/101MA	TI	
x	x	x	x	x	x	Development module for evaluation and debugging of Z8000-based systems.	Z8001DM	Zilog	25
x	x	x	x	x	x	See above.	Z8002DM	Zilog	
x	x	x	x	x	x		SDK-86	Intel	
x	x		x	x		Nova instruction set, PROM resident entry and debugging program. Up to 4 I/O controller boards memory expansion to 64K bytes.	SPARK-16	Fairchild	
x	x	x	x	x	x	CPU board based on J11 CMOS microprocessor.	LSI-11/73	DEC	
x	x		x	x	x	Supported by RT-11, Micropower Pascal.	KXT11-AB	DEC	30
x	x		x	x	x	Two serial lines are programmable synchronous/asynchronous. Up to 14 units can operate as peripheral processors on a single Q-Bus.	KXT11-C	DEC	
x	x	x	x	x	x	Isolite auto self test, floating point option, real-time clock. Hardware multiplication and division.	NM4/04	CompAuto	
x	x	x	x	x	x	Mounts on 5- 1/4' floppy, SCSI bus interface, no wait states, boots PC-DOS, 7 watts	Little Board/186	Ampro	
x	x	x	x	x	x	Same size as 5 1/4 inch floppy drive. Mounts directly on it.	LittleBoard/186	Ampro	
x	x	x	x	x	x	Floppy-disk controller, SASI port for hard disks.	SLAT256	Slicer	35
	x					STDbus CPU and memory card set.	DSTD-160/360	DY-4	
	x				x	Includes link to PC for software development.	8500	Cubit	
x	x	x	x	x	x	High-performance 16-bit processor with special format card cage.	ZT8816	Ziatech	
x	x	x	x	x	x	High-performance 16-bit processor with special format card cage.	ZT8817	Ziatech	
x	x		x	x		Optional 8087 numeric data processor or floating point co-processor, 8089 I/O processor.	10888	Enterprise	40

Software Support									
Assembler	Debug/ Monitor	Editor	High Level Language	Operating System	Hardware Support	Comments	Model	Source	Line
x	x					The 68008 is a 68000 with 8-bit wide path to the outside world. DMA can be provided off board. Up to 8K RAM on board. Serial lines are RS-232C buffered.	FX-688	AllenSys	
x	x	x	x	x	x	Supported by UNOS and VN/System V operating systems. Includes second 68000 for IOP.	CP-32	CharlesRiver	
x	x			x	x		PME-68-2D	PlesseyMicro	
					x	Instruction set compatible with DEC PDP-11, optional on-board lithium battery.	VME-1120D	LogicalDes	
x	x	x	x	x	x	Accepts 48Kb RAM or ROM. Two serial RS232 ports.	AC-V11	Astraea	5
x	x	x	x	x	x	Memory management. Accepts 48KB RAM/ROM/PROM.	AC-V12	Astraea	
x	x	x	x	x	x	All Force CPU's function as slot 1 system control.	CPU-1	Force	
x	x	x	x	x	x	RAM is dual-port, real-time clock with battery.	PME68-1B	PlesseyMicro	
x	x			x	x	On-Board Disk Controller, Real-Time Clock with Battery, Multiprocessing Support.	PME68-2/100	PlesseyMicro	
x	x	x	x	x	x	On-Board DMA Controller and MMU. Real-Time Clock, 4-Level Arbiter.	PME68/3	PlesseyMicro	10
x	x	x	x	x	x	No wait-state dynamic RAM, up to 4 serial I/O parts, SASI/SCSI bus mass-storage interface, buffered parallel printer port, 3-channel programmable counter/timer.	IV-1600	Ironics	
x	x	x	x	x	x	Includes 4Kb cache, supported by UNOS and UN/System V.	VCP-2000	CharlesRiver	
x	x	x	x	x		Includes CSCI controller and fast arbitration option for systems with less than 5 masters. No-wait state 16 context MMU with dual-port RAM.	PV68F	Pacific	
x	x	x	x	x			V68S	Pacific	
x	x	x	x	x	x	Disk Controller, Real-Time Clock with Battery, Virtual Memory and Multiprocessing Support.	PME68-2/102	PlesseyMicro	15
x	x	x	x	x	x	Also available as complete system.	VME-6810	IntSolutions	
x	x	x	x	x	x		OB68K1A-128	Omnibyte	
x	x	x	x	x	x	Software definable 16-bit parallel ports, 3 16-bit timer/counters, 8 sockets for up to 64K bytes of EPROM.	OB68K1A-32	Omnibyte	
							M68K10	SBE	
x	x	x	x	x	x	Multi-user CPU board. Memory management capability, calendar/clock.	OB68K/MMU	Omnibyte	20
x	x	x	x	x	x	Allows DEC-LSI-11 and PDP-11 computers to execute PC-SOC or CP/M-86 programs from any terminal on the DEC system. Has an RS-232C compatible serial channel. Comes with a control program resident to the native DEC operating system.	QCP-11+	Logicraft	
x	x	x	x	x	x	One, two or three 8088 microprocessors, each having from 256K to 768K RAM and an RS-232C compatible serial channel. Enables DEC PDP-11 and VAX computers access to PC-DOS and/or CP/M-86 Micro programs and DEC applications can run simultaneously.	HCP-11	Logicraft	
x	x	x	x	x	x	No wait-state dynamic RAM, dual-port static RAM. 2-Bytewide sockets, interrupt handler, optional floating-point processor.	IV-1601	Ironics	
	x					Dual 32032 processors, optional memory management unit and floating point processor, supports 32-bit memory bus.	NAP-2000	Matrox	
x	x	x	x	x	x	One IEEE P959 (iSBX) connector for options such as parallel I/O, serial I/O, floating point and GPIB.	OB68K/MSBC1	Omnibyte	25
x	x	x	x	x	x	1.5 MB/s SCSI controller, real-time clock, 2-level demand-paged MMU, up to 64 MB dual-port no-wait-state RAM.	M020	Synergy	
	x					Includes on-board memory management unit and floating point processor, supports dedicated 32-bit memory bus.	MAP-2000	Matrox	
x	x			x		Dual processor with NS32016 and Z80. Runs with CP/M.	16KZ	InrVision	
x	x	x	x	x	x	Optional demand paged virtual memory management module, on board software transparent cache configured as 4K entries, RAMbus interface, and two 28-pin ROM sockets.	**M68KVM04**	**Motorola (2115)**	
x	x	x	x	x	x	Evaluation board for WE32100 CUP and WE32101 MMu. Interactive monitor program, individually maskable interrupts, 3 16-bit timers	**WE321EB**	**AT&T (1603)**	30
	x	x	x	x	x		**WE321SB-V100**	**AT&T (1603)**	
x	x	x	x	x	x	No wait state RAM access, floating point co-processor, 16-bit programmable timer.	IV-3201	Ironics	
x	x	x	x	x	x	Fully functional system controller, 16 universal JEDEC 28-pin sockets for RAM/ROM.	OB68K/VME1	Omnibyte	
x	x	x	x	x	x	SCSI controller, real-time clock, 2-level demand-paged MMU, up to 64 MB dual-port no-wait-state RAM, on board arbiter.	V020	Synergy

MICROCOMPUTER–SUPPORT BOARDS

Supported System Function	Part Number	Source
Apple		
High-speed PF474 string comparator.	PF-AP	Proximity
I/O, High-level analog-input board	DT2832	DataTrans
I/O, Low-level analog-input board	DT2834	DataTrans
Bit Bus		
Remote multifunction interface	DT901/901-I	DataTrans
C-44		
Controller, Floppy Disk.	DDC-35	Onset
Converter, A/D, 12-bit.	MOR-800	Onset
Converter, A/D, 32-channel.	ADC-32	Onset
Data logging, 64 Kbytes.	DS-64	Onset
I/O, Parallel port, 40-line.	PAR-40	Onset
LCD Interface with Votrax speech chip.	KDT-16	Onset
Math, Combination UART and miltiply/divide board, 50 to 19,200 baud, RS-232 interface.	ACR-10	Onset
Memory, 16 Kbyte RAM.	MEM-88	Onset
Memory, 64 Kbyte RAM.	MEM-64	Onset
Memory, 512K Dynamic RAM board.	RAM-512	Onset
C-bus		
I/O, Processor for input/output channels using Z-80A MPU.	IOP	Cromemco
I/O, QUADART, 4-channel synchronous/asynchronous interface, modem handshaking channel-to-channel diagnostic loop-back capability, four interval timers, vectored interrupts.	QDRT	Cromemco
CIMbus		
Controller, clock/calendar, real-time clock, 4-year calendar, provision for up to 32Kx8 battery-backed RAM.	CIM-510	National
I/O, Analog input, 32 single-ended, 16 differential, or 8 differential and 16 single-ended channels.	CIM-411	National
I/O, Analog output, 12-bit resolution on either of two output channels.	CIM-421	National
I/O, Distributed I/O bus interface.	CIM-230	National
I/O, Dual channel serial, independent asynchronous I/O channels.	CIM-203	National
I/O, Frequency/period measurement, interface to tachometers and voltage-to-frequency converters.	CIM-220	National
I/O, Parallel, 40-bit programmable I/O lines with provisions for interchangeable line drivers and terminators.	CIM-210	National
I/O, Power, interfaces to a CIMBUS system via the distributed I/O bus.	CIM-311	National
I/O, Serial, single-channel asynchronous transfer.	CIM-201	National
Math, Processor, 2 MHz, implements transcendental math functions with AM9511 chip.	CIM-550	National
Math, Processor, 4 MHz, implements transcendental math functions with AM9511 chip.	CIM-551	National
Memory, PROM/RAM expansion, no RAM installed.	CIM-100	National
Memory, PROM/RAM expansion, 8 Kbyte RAM installed.	CIM-104	National
Memory, PROM/RAM expansion, 16 Kbyte RAM installed.	CIM-108	National
Miscellaneous, Voltage regulator, supplies 5, 15, and -15 Vdc to Cimbus interface.	CIM-610 CIM-612	National National
Prototyping board, 32 16-pin DIP capacity.	CIM-630	National
Prototyping board, 63 16-pin DIP capacity.	CIM-631	National

Supported System Function	Part Number	Source
Ethernet		
Ethernet node processor/LAN controller, provides 10 Mbp/s Ethernet interface, on-board EPROM.	**M68KVM33**	**Motorola (2116)**
EXORbus		
Clock/calendar/timer.	GMS6523	GenMicro
Controller, Color RF/video.	GMS6512	GenMicro
Controller, CRT/Keyboard Controller.	GMS6523	GenMicro
Controller, IEEE-488 GPIB.	GMS6514	GenMicro
Controller, Intelligent floppy disk, for 8-inch diskette drives.	9671	CreMicro
Controller, Intelligent Winchester floppy controller.	GMS6529	GenMicro
Controller, Mini-floppy controller.	GMS6519B	GenMicro
Controller, QUAD ACIA and TTV.	GMS6511	GenMicro
Controller, SCSI Controller.	GMS6509	GenMicro
Converter, A/D, 12, 14 and 16-bit, 6 inputs.	GMS6503	GenMicro
Converters, D/A, 10- or 12-bit.	GMS6502	GenMicro
Converters, Data acquisition module, 12-bit sample/hold, programmable differential gain amplifier.	GMS6520	GenMicro
Data encryption processor.	9659	CreMicro
Design prototyping	GMS6513	GenMicro
Extender module	GMS6516	GenMicro
I/O, Analog output, 10-bit resolution for any selected bipolar span on sixteen channels between -5 Vdc to Q5 Vdc.	9663	CreMicro
I/O, Asynchronous eight channel duplex serial.	9650A	CreMicro
I/O, Combination serial-parallel.	9622	CreMicro
I/O, Digital, 80 bidirectional I/O lines, 8 timers.	GMS6501	GenMicro
I/O, Form C contact closure module	9673	CreMicro
I/O, Four port asynchronous serial communications interface module.	MBK6850	MRCSys
I/O, Intelligent parallel.	9657	CreMicro
I/O, Parallel, sixteen 8-bit ports.	9620A	CreMicro
I/O, Parallel, 32 terminated inputs, 32 latched outputs.	96103	CreMicro
I/O, Printer interface.	9625	CreMicro
I/O Processor module	9642	CreMicro
I/O, signal switching, 8 solid-state relays, 16 mechanical relays, 32-transistors, 16 analog switches.	GMS6504	GenMicro
I/O, 80-line digital I/O module.	MBK6821	MRCSys
Intelligent, time-date subsystem, quartz referenced, non-volatile source.	9661	CreMicro
Magnetic disk storage subsystem, 8-inch Winchester drives, 8-inch diskette drives or dual 5-inch diskette drives.	9670	CreMicro
Math, Arithmetic processor/memory module provides both dedicated binary fixed/floating point and 16 Kbyte memory.	9611	CreMicro
Memory, EPROM Programmer.	GMS6522	GenMicro
Memory, 16 Kbyte RAM, non-volatile.	9637A	CreMicro
Memory, 16 Kbyte static RAM, with parity, clock speed 1 or 2 MHz.	MEX6816-22S	Motorola
Memory, 32 Kbyte EPROM/RAM.	9616	CreMicro
Memory, 32 Kbyte non-volatile memory (battery backed).	GMS6524	GenMicro
Memory, 64 Kbyte RAM, accommodates 20 address lines.	9638	CreMicro
Memory, 64 Kbyte RAM, non-volatile.	9635	CreMicro
Memory, 64 Kbyte, 256 Kbyte, 1 Mbyte Dynamic RAM.	GMS6505	GenMicro
Memory, 65 Kbyte EPROM/ROM/RAM memory module.	MBK65KBM	MRCSys
Memory, 128 Kbyte EPROM/RAM.	GMS6508	GenMicro
Memory, 128 Kbyte RAM, up to 20 address lines.	9634	CreMicro
Memory, 256 Kbyte RAM, 200-ns access time.	9633	CreMicro

† Military Temperature Range (−55° to 125°C)

MICROCOMPUTER-SUPPORT BOARDS (Cont'd)

Supported System Function	Part Number	Source
EXORbus		**(Cont'd)**
Multiple programmable timer, eight MC6840 triple-programmable timers.	9640A	CreMicro
Reed relay contact closure with 32 Form "A" contact sets.	96702	CreMicro
Speech synthesizer and badge encoder.	9623	CreMicro
Utility prototyping board.	9610	CreMicro
Utility prototyping board, buffered.	9612	CreMicro
Exorciser		
EPROM Programmer.	PP-6432	AppBusComp
I/O, Floppy controller.	FP950	AppBusComp
I/O, Video controller.	CRT-80	AppBusComp
Memory board.	MB-64	AppBusComp
IBM PC		
Controller, disk controller with DMA capability.	FG-107	Microlog
Controller, GPIB controller—backplate accepts GPIB stackable connectors directly; support for 5 languages; small format fits XT-type short slots.	ZT1444	Ziatech
Controller, Multifunction GPIB controller—backplate accepts GPIB stackable connectors directly; support for 5 languages; Multimodule expansion socket; battery back-up clock/calendar.	ZT 1488A	Ziatech
Controller, 8-inch Floppy disk controller.	FG-107	Microlog
Controller, 1280x968 color graphics processor, 256 colors from 4096 color look-up table, 100% IBM software compatible.	PG-1280	Matrox
Controller, 512x512 x 8-bit Image processor combines image digitization and display, includes software image processing subroutine library.	PIP-512	Matrox
Controller, 640x480 color graphics processor, 256 colors from 4096 color look-up table, 100% IBM software compatible.	PG-640	Matrox
High-speed PF474 string comparator.	PF-PC	Proximity
I/O, High-level analog and digital I/O system	DT2801	DataTrans
I/O, Low-level analog and digital I/O system	DT2805	DataTrans
I/O Multifunction I/O Board.	I/O A¢	AppBusComp
I/O, Multifunction I/O board for data acquisition and control	DT2806	DataTrans
I/O, SCSI Host adapter permits IBM PCXT and ATs to access disk drives and other SCSI peripherals. Includes 8K ROM driver, parity.	ADP-31A	NCR
I/O Simultaneous sample and hold analog and digital I/O	DT2818	DataTrans
I/O, Single board analog and digital I/O	DT2808	DataTrans
I/O, Video subsystem for video digitization and display	DT2803	DataTrans
I/O, Voice Synthesizer—64 unique phonems for unlimited vocabulary, on-board 4W audio amplifier.	MSI-VS01	MicroCompSys
Memory, 0.5 Mbyte memory board.	AI-1512	AppBusComp
Memory, 256 Kbyte RAM expansion 200-ns access time, 400-ns cycle time.	FG-102	Microlog
Memory, 384 Kbyte RAM expansion.	FG-122	Microlog
Memory, 512Kb DRAM, parity, RS232-C.	CI-PCMT	Chrislin
Multifunction, Includes: 384K expansion memory, serial port, parallel port, game port, real time clock/calendar.	FG-122	Microlog
Multifunction memory board.	MAGA A¢	AppBusComp
I/O Channel		
Controller, Winchester floppy disk controller. Controls 5-1/4 inch Winchester or 5-1/4-inch/8-inch floppy disk drives, 4 Kbyte FIFO buffer.	M68RWIN	Motorola
Converter, A/D input expander module, adds 8/16 additional differential/single ended inputs to MVME600.	**MVME601**	**Motorola** (2112)

Supported System Function	Part Number	Source
Converter, 12-bit A/D converter, 8/16 differential/single-ended channels with four full-scale input voltage ranges of 0.5, 1.0, 5.0 or 10.0 V.	**MVME600**	**Motorola** (2112)
Converter, 16/32-channel differential/single-ended intelligent A/D conversion. Controls 12-bit A/D converter and multiplexed analog inputs from 16/32 channels.	M68RAD1-1	Motorola
iSBC		
Advanced data communications processor offers three HDLC/SDLC half/full duplex communications channels-optional ASYNC/SYNC on two channels, supports RS232C (including modem support) CCITT V.24 or RS442A/449 interfaces, on-board DMA supports 800K baud operation, self-clocking NRZI SDLC loop data interface, 16Kbytes static RAM, two iSBX bus connectors.	iSBC88/45	Intel
Controller, Controls up to four soft sectored SMD interface compatible disk drives, 12 Mbyte to 2.4 Gbyte per controller, on-board diagnostic, ECC and full sector buffering.	iSBC220	Intel
Controller, Flexible diskette controller for most single and double density disk drives, on-board, iSBX bus for additional functions, read and write on single or multiple sectors.	iSBC208	Intel
Controller, Generic Winchester controller for up to four 5-1/4, 8 or 14-inch Winchester disk drives, compatible with standard multibus, supports ANSI X3T9/1226 standard interface. On-board diagnostics and ECC plus full sector buffering.	iSBC215	Intel
Controller, Intelligent communications controller with 4 programmable USART channels, 8085A CPU, clock, 16 Kbytes dual-port RAM, 12-level programmable vectored interrupt control, RS232C drivers and receivers.	iSBC544	Intel
Controller, Intelligent digital I/O Controller with up to four microprocessors, 3 MHz 8085A central control processor, three operational modes-stand-along digital controller, multibus master, intelligent slave (slave to multibus master); 2 Kbytes dual port static RAM, sockets for up to 8 Kbytes of 2758, 2716, 2732 EPROms; 48 programmable parallel I/O lines, three programmable counters, 12 levels of programmable interrupt control.	iSBC569	Intel
Controller, Single density flexible diskette controller has direct compatibility with most soft-sectored standard 8-inch and 5-1/4-inch drives, DMA I/O, support by cp/M operating system.	iSBC204	Intel
Controller, 4-Channel communications controller, 4 RS232C or 20 mA current loop buffered USART channels plus Auto-Call Unit Interface with programmable baud rates.	iSBC534	Intel
Controller, 1/4-inch tape drive interface provides tape backup capability for iSBC215G generic Winchester controller. Supports transfer rates of 90 Kbyte, 30 Kbyte or 17 Kbyte/s depending on tape speed.	iSBC217B	Intel
I/O, Combination I/O expansion, 48 programmable I/O lines with sockets for interchangeable line drivers and terminators, synchronous/asynchronous communications interface with RS232C drivers and receivers, eight maskable interrupt request lines with pending interrupt register, 1 ms interval timer.	iSBC517	Intel
I/O, Multichannel bus to iLBX bus interface data rates up to 5.3 Mbytes/sec, addresses up to 16 Mbytes iLBX bus memory.	iSBC580	Intel
I/O, Optically isolated, up to 48 digital optically isolated input/output data lines, compatible with iSBC 80 series, choice of: 24 fixed input lines, 16 fixed output lines, 8 programmable lines, provisions, for plug-in optically isolated receivers, drivers, and terminators.	iSBC556	Intel

Supported System Function	Part Number	Source	Line
iSBC		**(Cont'd)**	
I/O, Programmable expansion with 72 I/O lines and sockets for interchangeable line drivers and terminators, jumper selectable I/O port addresses and 0.5, 1.0, 2.0, or 4.0 ms interval timer, eight maskable interrupt request lines with priority encoded and programmable interrupt algorithms.	iSBC519	Intel	
Memory, Bubble memory, 512 Kbyte, automatic error correction, DMA capability non-volatile storage.	iSBC254S	Intel	
Memory, iLBX 128 Kbyte RAM allows access to both multibus and iLBX interfaces, single bit error correction and double bit error detection, 16 Mbyte adressing capability.	iSBC028CX	Intel	
Memory, iLBX 256 Kbyte RAM allows access to both multibus and iLBX interfaces, single bit error correction and double bit error detection, 16 Mbyte adressing capability.	iSBC056CX	Intel	
Memory, iLBX 512 Kbyte RAM allows access to both multibus and iLBX interfaces, single bit error correction and double bit error detection, 16 Mbyte adressing capability.	iSBC012CX	Intel	5
Memory, Multimodule expansion board	iSBC251	Intel	
Memory, Univerbal site memory expansion board supports EPROM, ROM, E^{2}PROM, SRAM, IRAM and NURAM. Contains sixteen 28-pin sockets, iLBX Bus or multibus selectable.	iSBC428	Intel	
Memory, up to 16 Kbyte EPROM expansion plugs directly into iSBC 86/12A single board computer.	iSBC340	Intel	
Memory, 0.5-Mbyte dual-port memory board	iSBCMEM/312	Intel	
Memory, 1 Mbyte ECC RAM, iLBX	iSBC010CX	Intel	10
Memory, 1 Mbyte Parity RAM, iLBX, synchronous interface	iSBC010EX	Intel	
Memory, 1-Mbyte dual-port memory board	iSBCMEM/310	Intel	
Memory, 2 Mbyte advanced 4 Mbit controller	iSBC264	Intel	
Memory, 2 Mbyte ECC RAM, iLBX	iSBC020CX	Intel	
Memory, 2 Mbyte Parity RAM, iLBX, synchronous interface	iSBC020EX	Intel	15
Memory, 2-Mbyte dual-port memory board	iSBCMEM/320	Intel	
Memory, 4 Kbyte of static RAM directly to iSBC 80/24 or iSBC 88/40 single board computers, 0.5 watts incremental power dissipation.	iSBC301	Intel	
Memory, 4 Mbyte Parity RAM, iLBX, synchronous interface	iSBC040EX	Intel	
Memory, 4-Mbyte dual-port memory board	iSBCMEM/340	Intel	
Memory 8 Kbyte RAM expansion diectly to iSBC 86/05 and iSBC 88/25 single board computers, single +5V supply.	iSBC302	Intel	20
Memory, 28-pin multimodule EPROM with sockets for up to 64 Kbyte of expansion with 27128 EPROMS.	iSBC341	Intel	
Memory, 32 Kbyte of dual port dynamic RAM and plugs directly into iSBC86/12A single board computer.	iSBC300	Intel	
Memory, 32 Kbyte RAM expansion through direct multibus interface, on-board parity generator/checker and error status register, jumper selectable base address on any 4 Kbyte boundary within a 16 Mbyte address space.	iSBC032A	Intel	
Memory, 64 Kbyte EPROM expansion via direct multibus interface, switch selectable base address on 4 Kbyte boundaries for each memory bank.	iSBC464	Intel	
Memory, 64 Kbyte RAM expansion through direct multibus interface, on-board parity generator/checker and error status register, jumper selectable base address on any 4 Kbyte boundary within a 16 Mbyte address space.	iSBC064A	Intel	25
Memory, 128 Kbyte of dual port RAM expansion for iSBC 86/30 board, single-bit error correction.	iSBC3042	Intel	
Memory, 128 Kbyte of dual port RAM expansion for iSBC 86/30 single board computer.	iSBC304	Intel	

Supported System Function	Part Number	Source	Line
Memory, 128 Kbyte parity RAM multimodule expansion for iSBC188/48 single board computer.	iSBC307	Intel	
Memory, 128 Kbyte RAM, direct IEEE P796 multibus interface, single-bit error correction and double bit error correction via Intel 8206 device.	iSBC028C	Intel	
Memory, 128 Kbyte RAM expansion through direct multibus interface, on-board parity generator/checker and error status register, jumper selectable base address on any 4 Kbyte boundary within a 16 Mbyte address space.	iSBC028A	Intel	30
Memory, 256 Kbyte RAM, direct IEEE P796 multibus interface, single-bit error correction and double bit error correction via Intel 8206 device.	iSBC056C	Intel	
Memory, 26 Kbyte RAM expansion through direct multibus interface, on-board parity generator/checker and error status register, jumper selectable base address on any 4 Kbyte boundary within a 16 Mbyte address space.	iSBC056A	Intel	
Memory, 512 Kbyte Parity RAM, iLBX, synchronous interface	iSBC012EX	Intel	
Memory, 512 Kbyte RAM, direct IEEE P796 multibus interface, single-bit error correction and double bit error correction via Intel 8206 device.	iSBC012C	Intel	
Memory, 512 Kbyte RAM, direct multibus interface to iSBC86, iSBC88 or iSBC 80 single board computer; on-board parity generator/checker and error status register.	iSBC012B	Intel	35
iSBX			
Controller, Flexible disk controller is software and hardware compatible replacement for iSBX 218 module. Controls most single/double density and single/double sided floppy drives, read and write on single or multiple sectors.	iSBX218A	Intel	
Controller, Floppy disk controller—supports any combination of 5-1/4, 8 inch, single or double side/density drives, IBM standard formats. Western Digital 2793/1793 software interface.	SBSxFDC	SingleBoard	
Controller, Floppy disk controller, 5- 1/4 or 8-inch single or double density, up to 4 drives, DMA or I/O operation	CBX-FDC	Comark	
Controller, Video alpha-numeric controller provides either black and white or eight color displays in 7x9, 5x7 or 6x8 character fonts, on-board keyboard and light pen interface, 50 or 60Hz frame rate operation.	iSBX270	Intel	
Controller, Video graphics controller interfaces to either black and white or color display monitors on-board refresh memory supports 512x512 b&w or 256x256 eight color display resolution, drawing commands include line, arc, circle, rectangle, character, area fill, pan and scroll.	iSBX275	Intel	40
Controller, 640 x 400 color graphics, on-board display controller executes graphics primitives.	MSBX-800	Matrox	
I/O, Analog input module with 16 SE/8DI channels	DTX311	DataTrans	
I/O, Analog output module, 8-channel D/A	DTX328	DataTrans	
I/O, Analog to Digital, 16 differential or 32 single-ended inputs 12-bit resolution	CBX-AD832	Comark	
I/O, Bit serial communications multimodule, provides HDLC/SDLC half/full duplex communications channel for iSBX bus compatible microcomputers, supports one RS232C or RS449/442A interface, software programmable baud rate up to 64K baud.	iSBX352	Intel	45
I/O, Digital I/O module	DTX350	DataTrans	
I/O, Dual serial, asynchronous or bisynchronous bit-sync operation, two FDX transmitters, DMA	CBX-S1200	Comark	
I/O, Expands DTX311 to 64SE/32 DI channels	DTX311EX	DataTrans	
I/O, Host adapter from SBX to SASI/RS-232C.	SBX/SASI	EnergySci	
I/O, Host adapter from SBX to SCSI and QIC-02	SCSI/QIC	EnergySci	50
I/O, IEEE-488 GPIB interface supplied with cable and MCS-80/85 or iAPX 86/88 software drivers.	μDX-488	MicroDesigns	

† Military Temperature Range (−55° to 125°C)

* Typical Value

MICROCOMPUTER-SUPPORT BOARDS (Cont'd)

Supported System Function	Part Number	Source	Line
iSBX		**(Cont'd)**	
I/O, Parallel I/O multimodule, iSBX bus compatible expansion, 24 programmable I/O lines with sockets for interchangeable line drivers and terminators, three jumper selectable interrupt request sources.	iSBX350	Intel	
I/O, Parallel, 24 programmable lines, bidirectional bus drivers	CBX-DI240	Comark	
I/O, Serial I/O multimodule, iSBX bus compatible I/O expansion, programmable synchronous/asynchronous communications channel with RS232C or RS4449/442 interface, software programmable baud rate generator, two programmable 16 bit BCD or binary timers/event counters.	iSBX351	Intel	
Math, Fixed/floating point math expansion 4MHz operation, fixed point single and double precision (16x32-bit), floating point double precision (32-bit), binary data formats.	iSBX331	Intel	
Math, Floating point math expansion, 4MHz operation, single (32-bit)/double (64-bit) precision arithmetic and data manipulation commands, add, subtract, multiply and divide functions.	iSBX332	Intel	5
Math, Numeric data processor provides high speed fixed and floating point functions for iSBC86/88, and iAPX86/88 systems, supports seven data types including single and double precision integer and floating point.	iSBC337A	Intel	
Memory, Bubble memory, 128 Kbyte, automatic error correction, compatible with DMA controller, non-volatile storage.	iSBX251	Intel	
Multifunction, GPIB multimodule has talker/listener functions including: addressing, handshake protocol, service request, serial and parallel polling schemes; controller functions include: transfer control, service requests and remote enable.	iSBX488	Intel	
Multifunction, real-time clock, two synchronous/asynchronous serial ports, 2 Kbyte or 8 Kbyte CMOS RAM, battery backup.	µDX-221	MicroDesigns	
LSI-11			
Converter, high-speed high-resolution A/D	DT2757	DataTrans	10
I/O, Analog Input for simultaneous sample and hold	DT3368 DT3388	DataTrans DataTrans	
I/O, Analog input subsystem, 32 single-ended, 16 differential inputs, 12-bit resolution.	RTI-1250	AD	
I/O, Analog output subsystem, four channels, 12-bit resolution.	RTI-1252	AD	
I/O, Combination analog subsystem, 16 single-ended, 8 differential inputs, 2-channel output, 12-bit I/O resolution.	RTI-1251	AD	15
I/O, DMA analog input system	DT2752	DataTrans	
I/O, DMA Analog output system	DT2751	DataTrans	
I/O, Intelligent color graphics interface	DT2750	DataTrans	
I/O, QIC 2 Tape controller.	IS-QIC2	IntSolutions	
I/O, Simultaneous sample and hold	DT2758	DataTrans	20
I/O, 5-1/2 inch Winchester (ST506 compatible) controller.	RL101	IntSolutions	
Memory, RAM, (dual ported) 512 Kbyte to 1 Mbyte, or 1, 2 and 3 Mbyte versions.	IS-68XM-XXX	IntSolutions	
Programmable real-time clock board	DT2769	DataTrans	
Microboard			
Controller, Floppy disk interface, SASI drives up to four floppy disks, standard, mini or micro.	CDP18S651	RCA	
Converter, A/D and D/A, unipolar only, 8-bit resolution.	CDP18S654	RCA	25
Converter, A/D and D/A, unipolar or bipolar operation, 8-bit resolution.	CDP18S644	RCA	

Supported System Function	Part Number	Source	Line
Converter, A/D, 8 channels, differential or 16 single-ended inputs, unipolar input, 8-bit resolution.	CDP18S658	RCA	
Converter, A/D, 8 differential or 16 single-ended inputs, 12- or 8-bit resolution.	CDP18S643A	RCA	
Converter, A/D, 8 differential or 16 single-ended inputs, 8-bit resolution.	CDP18S648	RCA	
Converter, D/A, two channels, unipolar or bipolar operation, 8 bits resolution.	CDP18S647	RCA	30
Converter, D/A, 2 channels, unipolar output, 8-bit resolution.	CDP18S657	RCA	
Converter, D/A, 2-channel, 12 or 8 bit resolution.	CDP18S642	RCA	
Counter/timer (eight independent circuits).	CDP18S650	RCA	
Direct connect auto model (Bell compatible) 1200 baud.	CDP18S653V2	RCA	
Direct connect auto model (Bell compatible) 300 baud.	CDP18S653V1	RCA	35
Direct connect auto modem (CCITT compatible) 1200 baud.	CDP18S653V4	RCA	
Direct connect auto modem (CCITT compatible) 300 baud.	CDP18S653V3	RCA	
I/O, Digital, control and display module, 256 Kbyte RAM, 4 control switches, six digit hex displays.	CDP18S640A	RCA	
I/O, Digital, control and display module 256 Kbyte RAM, 4 control switches, six digit hex displays, six LED indicators UART terminal interface.	CDP18S640A1	RCA	
I/O, Digital UART Interface.	CDP18S641	RCA	40
I/O, Optically isolated dc interface, eight input and eight output signal lines.	CDP18S663	RCA	
I/O, Parallel interface, two 8-bit input ports and three 8-bit outbit ports with data strobe signals.	CDP18S646	RCA	
I/O, Parallel Opto 22 module interface, 24 bidirectional lines.	CDP18S662	RCA	
Memory, 4 Kbyte EPROM, permanent data retention.	CDP18S627	RCA	
Memory, 4 Kbyte RAM.	CDP18S620	RCA	45
Memory, 8 Kbyte RAM.	CDP18S623A	RCA	
Memory, 8 Kbyte RAM, battery backup.	CDP18S622	RCA	
Memory, 8/16/32 Kbyte ROM/PROM, permanent data retention.	CDP18S625	RCA	
Memory, 16 Kbyte RAM.	CDP18S621	RCA	
Memory 32 Kbyte RAM.	CDP18S629	RCA	50
Memory, 32/64 Kbyte EPROM/ROM.	CDP18S626	RCA	
Multifunction, Memory and I/O module, 2 Kbytes RAM, 8 Kbytes ROM, forty programmable I/O lines.	CDP18S660	RCA	
Multifunction, Memory and tape, 1-Kbyte RAM, 24-Kbyte ROM, two cassette tape ports.	CDP18S652	RCA	
Micro Bus			
Controller, Parallel printer controller emulates 4221 line printer controller, optional 64 Kb buffer, Centronics interface.	DLP1	IntelComp	
Magnetic Tape Coupler, interfaces DG desktop generation to 1/2 inch tape drives equipped with an industry standard formatter, including streaming tape drives.	DMT1	IntelComp	55
Memory, 523 Kbytes increments through 2M total capacity dynamic RAM, 18 bits wide including parity.	DMM1	IntelComp	
Micromodule			
I/O, Analog input subsystem, 32 single-ended, 16 differential inputs, 12-bit resolution.	RTI-1230	AD	
I/O, Analog input, 8 differential channels, fused imputs, 12-bit resolution.	MP7608-I	Burr-Brown	
I/O, Analog input, 8 differential channels, 200 Vdc protection, 12-bit resolution.	MP7608	Burr-Brown	
I/O, Analog input, 8-channel differential input, 12-bit resolution.	MP7208	Burr-Brown	60

† Military Temperature Range (−55° to 125°C)

MICROCOMPUTER–SUPPORT BOARDS (Cont'd)

Supported System Function	Part Number	Source	Line
Micromodule	**(Cont'd)**		
I/O Analog input, 16-channel single-ended input, 12-bit resolution.	MP7216	Burr-Brown	
I/O, Analog input, 16-channel single-ended input, 12-bit resolution.	MP7218	Burr-Brown	
I/O, Analog input, 32 differential (64 single-ended), 2-channel output, 8-bit resolution.	MP7432-AO	Burr-Brown	
I/O, Analog input, 32 differential (64 single-ended), 8-bit resolution.	MP7432	Burr-Brown	
I/O, Analog output subsystem, four channel output, 12-bit resolution.	RTI-1232	AD	5
I/O, Analog output, 4-channel isolated-fused outputs, 8-bit resolution.	MP7504	Burr-Brown	
I/O, Analog output, 4-channel output, 12-bit resolution.	MP7104	Burr-Brown	
I/O, Combination analog subsystem, 32 single-ended, 16 differential inputs, two channel output, 12-bit resolution.	RTI-1231	AD	
I/O, Digital input, 24 channels, isolated, dry-contact closures.	MP710	Burr-Brown	
I/O, Digital input, 24 channels, isolated, wet-contact closures.	MP710-NS	Burr-Brown	10
I/O, Digital output, 32 channels, isolated, reed-relay protection.	MP702	Burr-Brown	
MS DOS 2.0			
Memory, Hard disk, tape and cartridge same as Targa I except the unit can have two drives either one of which could be 10, 15, or 31MB hard disk with tape backup (25 or 55MB) or removable 5MB cartridge.	Targa II	CMCIntl	
Memory, Hard disk, tape and cartridge same as Targa II with expansion slots available for adding up to 5 additional IBM PC compatible cards.	Targa III	CMCIntl	
Memory, Hard disk, tape and cartridge sub-system storage to IBM PC, XT and compatibles including Compaq, Columbia, Corona, Tava, Televideo 1605. Capacities of 10,15,31MB. 5MB removable cartridge media, or 1/4 tape in 25 or 55Mbyte capacity.	Targa I	CMCIntl	
Telephone add-on personal telephone management system (card) that turns IBM PC compatibles or an XT into a sophisticated telephone recording and playback system. It will answer calls, distributor messages, automatically dial, call forward and can be remotely controlled. Requires 192K or RAM in a PC.	pc Dial/Log	CMCIntl	15
Multibus			
Communications controller, Maximum GPIB data transfer rate of 1 Mb/s, 2Kbyte dual port RAM mappable anywhere in 1 Mb memory space.	BLC8488	MicroInds	
Communications controller, USART, RS232C.	MS-534	Comark	
Controller, Color Graphics Display Processor. 640x480x8 pixel, 4096 color look-up table, draws at 10 K vectors/second.	SX-900	Matrox	
Controller DMA board for high speed transfer of 8 or 16 bit data. Controls actual transfer of up to 65,536 words of data between memory and an external device.	MIB501A	MicroInds	
Controller, double density diskette controller to interface and iSBC to a double density flexible disc drive. Soft sectored format allowing 500 Kbyte data storage capacity per double density diskette. DMA logic.	MIB202	MicroInds	20
Controller, Floppy disk controller. Single or double density, up to 4 drives with 8 surfaces.	BLX218	MicroInds	
Controller, Graphics display controller, NEC 7220, 80186 display list processor, 1024x1024x4 pixels, 16 color, 4096 color look-up-table, light pen interface, one RS232C.	GDC-186	InnovRes	
Controller, High performance disk controller, SMD disk interface supports data rate up to 2.0 Mbytes/sec (enhanced SMD), DMA up to 3.0 Mbytes/sec, 2 Kbytes or 8 Kbytes FIFO buffer, automatic ECC correction, programmable DMA throttle. Drivers for UNIX and RMX-86 supplied.	450	Xylogics	
Controller, high performance tape controller, Pertec formatted interface, supports tape speeds from 12.5 ips. to 125 ips., densities of 800, 1600, 3200, and 6250 fcpi., DMA data rate up to 2.8 Mbytes/sec, supports either start/stop or streaming tape drives. Drivers for UNIX and RMX-86 supplied.	472	Xylogics	
Controller, high-speed controller with on-board DMA and dual ported memory (64Kbytes). No DMA support is required from system CPU board.	ZT87	Ziatech	25
Controller, High-speed GPIB controller—8K RAM: 20-bit addressing, 8 interrupts; 32 I/O ports; operating system—iRMX-86 ISIS, XENIX: data rate—300 Kbytes on-board DMA.	ZT 85/38	Ziatech	
Controller, Intelligent color video controller	CD21/7052	CentData	
Controller, Intelligent floppy disk controller, controls 4 5 1/4 ' and 8' floppy disk drives concurrently.	CD21/4130	CentData	
Controller, Intelligent GPIB controller—high-level user interface, supports 16-bit memory addressing, 1Kbytes RAM buffering.	ZT 80	Ziatech	
Controller, multifunction controller, supports ESDI disk drives and QIC-02 1/4 inch tape drives. Disk data rates up to 10 MHz, DMA up to 2.5 Mbytes/sec, separate disk and tape buffers allow simultaneous transfers from disk and tape, automatic ECC correction, programmable DMA throttle. Drivers for UNIX and RMX-86 supplied. Software compatible with 421 and 423.	422	Xylogics	30
Controller, Multifunction controller, supports SMD disk drives and QIC-02 1/4 inch tape drives. Disk data rates up to 10 MHz. (standard SMD data rate), DMA up to 2.5 Mbytes/sec, Separate disk and tape buffers allow simultaneous transfers from disk and tape, automatic ECC correction, programmable DMA throttle. Drivers for UNIX and RMX-86 supplied. Software compatible with 421 and 423.	423	Xylogics	
Controller, multifunction controller, supports ST506 disk drives and QIC-02 1/4 inch tape drives. Disk data rates up to 5 MHz, DMA up to 2.5 Mbytes/sec, separate disk and tape buffers allow simultaneous transfers from disk and tape, automatic ECC correction, programmable DMA throttle. Drivers for UNIX and RMX-86 supplied. Software compatible with 422 and 423.	421	Xylogics	
Controller, QIC-02 Cartridge tape controller	CD21/4029	CentData	
Controller, Winchester disk, up to two drives with up to 8 read/write heads each.	WD1002-SHD	Western	
Controller, Winchester/floppy disk, for up to two 5-1/4-inch Winchester and up to four 5-1/4-inch floppy-disk drives.	WD1002-MTB	Western	35
Controller, Four channel communications controller asynchronous/synchronous, data format and parity, band rates to 19.2K; maskable interrupts, modem control, error detection, 4 controlled channels.	BLC8534	MicroInds	
Controller, 1/2 -inch magnetic tape, DMA, IEEE 796 addressing	MT86	Comark	
Controller, 1/2 -inch magnetic tape, 20-bit memory mapped	MT80	Comark	
Controller, 8- or 5- 1/4 -inch, single or double side, double density, IBM compatible	MF85	Comark	
Controller, 1024x768 color graphics processor, 256 colors from 4096 color look-up table.	GXB-1000A	Matrox	40
Controller, 5 1/4 ' Floppy disk controller	CD21/4055	CentData	
Controller, 512x512x8 Image processor, includes software image processing subroutine library.	MIP-512	Matrox	
Controller, 8' Double density floppy disk controller	CD21/4015	CentData	

† Military Temperature Range (−55° to 125°C)

MICROCOMPUTER-SUPPORT BOARDS (Cont'd)

Multibus (Cont'd)

Supported System Function	Part Number	Source
Controller, 8' Floppy disk controller, 4 drives, ECC, on-board data separator, ECC 32-bit computer generated code.	BLC8230	MicroInds
Converter, Analog-to-digital, 16 differential or 32 single-ended inputs, programmable gain, 12-bit resolution.	MCX-AD832	Comark
Converter, High-level A/D converter	DT711 DT712 DT772	DataTrans DataTrans DataTrans
Converter, High-level A/D expansion board for DT712	DT713	DataTrans
Converter, Low-level A/D converter	DT714 DT774	DataTrans DataTrans
Converter, Low-level A/D expansion board for DT714	DT715	DataTrans
I/O, Analog board	DT732	DataTrans
I/O, Analog, High level intelligent system, 16 single-ended or 8 differential channels.	DT3752	DataTrans
I/O Analog I/O board with memory: 32 single ended/16 differential channels. No output channels. Programmable gain amplifier.	MIB8737-1	MicroInds
I/O Analog I/O board with memory; 32 single ended/16 differential channels. 2 Output channels. Programmable gain amplifier.	MIB8737-3	MicroInds
I/O, Analog input expander, 16 differential channels, 400 V isolation (must be used with MP8418 series).	MP8418-ISOE	Burr-Brown
I/O, Analog input expander, 48 differential, 96 single-ended analog input channels (must be used with MP8418 series).	MP8418-EXP	Burr-Brown
I/O, Analog input system, (16 single-ended or 8 differential), (32 single-ended or 16 differential) or (64 single-ended or 32 differential) channels.	DT1742	DataTrans
I/O, Analog input, 8 differential, 8-bit resolution.	MP8608	Burr-Brown
I/O, Analog input, 8 differential, 8-bit resolution, two channel analog output.	MP8608-AO	Burr-Brown
I/O, Analog input, 15 channel differential, 31 channel single-ended, resistor-programmable gain, 12-bit resolution.	MP8418	Burr-Brown
I/O, Analog input, 15 channel differential, 31 channel single-ended, 2-channel output, resistor-programmable gain, 12-bit resolution.	MP8418-AO	Burr-Brown
I/O, Analog input, 15-channel differential, 31-channel single-ended, 12-bit resolution, software programmable gain.	MP8418-PGA	Burr-Brown
I/O, Analog input, 15-channel differential 31-channel single-ended, 2-channel output 12-bit resolution, software programmable gain.	MP8418-PGA-AO	Burr-Brown
I/O, Analog input, 16 single-ended, 2 analog outputs, 8-bit resolution.	MP8616-AO	Burr-Brown
I/O, Analog input, 16 single-ended, 8-bit resolution.	MP8616	Burr-Brown
I/O, Analog input, 16-channel RTD input digitizer, excitation resistor compensation, 12-bit resolution.	MP8430	Burr-Brown
I/O, Analog input, 16-channel, 1000 V transformer isolated, 12-bit resolution.	MP8450	Burr-Brown
I/O, Analog input, 32 channel differential, 64 channel single-ended, two analog channel outputs, 8-bit resolution.	MP8632-AO	Burr-Brown
I/O, Analog input, 32-channel differential, 64-channel single-ended, 8-bit resolution.	MP8632	Burr-Brown
I/O, Analog, Isolated low level, 4 differential-input channels.	DT3755	DataTrans
I/O, Analog, low-level intelligent system, 16 single-ended or 8 differential channels.	DT3754	DataTrans
I/O, Analog output board	DT724	DataTrans
I/O, Analog output expansion modules, single channel of digital to analog conversion, 10-bit resolution, concurrent wattage and current modes.	BLX321	MicroInds
I/O, Analog output expansion system.	DT3776	DataTrans
I/O, Analog output, 4 channels, individual D/A converters, high-level inputs, 12-bit resolution.	MP8304	Burr-Brown
I/O, Analog output, 4 channels, individual D/A converters (without cable).	MP8305	Burr-Brown
I/O, Analog output, 16 channels, 12-bit resolution, high-level inputs.	MP8316-V	Burr-Brown
I/O, Analog output, 16 channels, 12-bit resolution, 4-20 mA inputs.	MP8316-I	Burr-Brown
I/O, Analog subsystem combination, 32 single-ended, 16 differential analog inputs, two analog outputs, 12-bit resolution.	RTI-732	AD
I/O, Analog subsystem, four analog-output channels, 12-bit resolution.	RTI-724	AD
I/O, Analog subsystem, 32 single-ended, 16 differential analog-input channels, 12 bit resolution.	RTI-711	AD
I/O, Central Services Module, integrates Multibus II central systems functions on a single board.	iSBCCSM/001	Intel
I/O, Current loop adapter provides current loop conversion for RS232C I/O channels, extends series/80 capability.	BLC530	MicroInds
I/O, Digital input, 5 channels, isolated, time measurement.	MP821-05	Burr-Brown
I/O, Digital input, 15 channels, isolated, time measurement.	MP821-15	Burr-Brown
I/O, Digital input, 24 channels, isolated, ac sense inputs.	MP810-AC	Burr-Brown
I/O, Digital input, 24 channels, isolated contact closure input.	MP810	Burr-Brown
I/O, Digital input, 24 channels, isolated, debounce circuit.	MP810-DB	Burr-Brown
I/O, Digital input, 24 channels, isolated, low-voltage inputs.	MP810-LV	Burr-Brown
I/O, Digital input, 24 channels, isolated, voltage input.	MP810-NS	Burr-Brown
I/O, Digital output, 16 channels, isolated, relay output.	MP801	Burr-Brown
I/O, Digital output, 32 channels, isolated relay output.	MP802	Burr-Brown
I/O, Digital to analog output, 8-channel 12-bit or 4-channel 12-bit.	DT1842	DataTrans
I/O, Digital-to-analog output, 8-channel 8-bit or 4-channel 8-bit.	DT1843	DataTrans
I/O, Expansion board. Independently controlled 8 bit parallel ports, interrupts for reduced system overhead control, automatic input port interrupt (8 external available), switch selected port address, variable-width strobed outputs.	BLC508	MicroInds
I/O, Extender board, power isolation allows removal/insertion of boards without loss of data or functions, complete access to a series/80 board for troubleshooting or debugging.	BLS8610	MicroInds
I/O, Floppy disk controller.	V8004	Century
I/O, High level analog output, 16 single-ended or 8 differential.	DT1841	DataTrans
I/O, High-level analog expander.	DT3772	DataTrans
I/O, High-level analog-to-digital output, 16 single-ended or 8 differential channels.	DT1751	DataTrans
I/O, Intelligent octal serial interface.	B1044	CentData
I/O, Intelligent SCSI host adapter permits host-to-peripheral and host-to-host communication.	ADP-32	NCR
I/O, Isolated analog input system, 4 differential channels.	DT1748	DataTrans
I/O, Isolated analog system, 4 differential channels, 12-bit integrating analog to digital converter.	DT1759	DataTrans
I/O, Isolated low level analog expander.	DT3775	DataTrans
I/O, Low level Analog input, 16 single-ended or 8 differential inputs.	DT1755	DataTrans
I/O, Low level analog input, (16 single-ended or 8 differential), (32 single-ended or 16 differential) or (64 single-ended or 32 differential).	DT1744	DataTrans
I/O, Low-level analog expander.	DT3774	DataTrans

† Military Temperature Range (–55° to 125°C)

MICROCOMPUTER-SUPPORT BOARDS (Cont'd)

Supported System Function	Part Number	Source	Line
Multibus		**(Cont'd)**	
I/O, Multibus II to Multibus I Link Board.	iSBCLNK/001	Intel	
I/O, Multi-media controller.	B1030	CentData	
I/O, Oct 21 serial interface	CD21/3043	CentData	
I/O, Parallel, 24 programmable lines bidirectional, IC sockets for line drivers, I/O terminators.	CMX-D1240	Comark	
I/O, Quad serial interface	CD21/3038	CentData	5
I/O, SASI host adaptor/hard disk controller.	V8007	Century	
I/O, Simultaneous sample and hold for high level, single-ended analog inputs	DT778	DataTrans	
I/O, Terminal controller.	B1031	CentData	
I/O, Video controller.	V8006	Century	
I/O, 4 channel serial multiplexer.	VM804	Century	10
I/O, 24-Channel Sequence of Events Input Board	MP840	Burr-Brown	
I/O, 72-Channel TTL I/O with Output Readback	MP830-72	Burr-Brown	
Intelligent communications interface	CD21/3500	CentData	
Intelligent analog peripherals multifunction expander	DT3762	DataTrans	
Math, floating point math multi-module plugs directly into any iSBX bus compatible host board offering incremental on board expansion. Single and double precision arithmetic and data manipulation commands. Software reset control.	MIB332	MicroInds	15
Math, High speed math unit; fixed point integer arithmetic, 16 and 32 bit format. Floating point arithmetic. Compare and test operation relative to floating point constant. Float to fix and fix to float conversions. Multimaster access.	MIB310A	MicroInds	
Memory & PROM/RAM/EEPROM board.	CD23/2200	CentData	
Memory, add-on—128K.	V8009	Century	
Memory, CMOS RAM 4 Kbytes memory/battery backup board. Base address selectable to start on any 4K memory address boundary. On board rechargeable batteries and charging circuitry.	MIB094	MicroInds	
Memory, Dynamic RAM board, 128K-2Mb EDC.	B1027	CentData	20
Memory, EPROM/RAM/EEPROM board with real-time clock/calendar.	B1035	CentData	
Memory, Expansion module: 256 Kb RAM which augments PM68K single board computer.	MXK	Pacific	
Memory, Expansion module; 756K or 1, 3, 4 Mbytes, dual-ported RAM auguments PM68D Single Board Computer.	MXD	Pacific	
Memory, iLBX Cache memory board.	B1041	CentData	
Memory, LBX 512K to 2 Mbyte parity checking dynamic RAM board	CD21/2500	CentData	25
Memory, Mbyte to Mbyte dynamic RAM.	CD21/2110	CentData	
Memory Output features: 96 Discrete open collector outputs, resident diagnostics.	S80 OUTPUT	Acco	
Memory, Programmable RAM/EPROM and I/O board.	CD21/5232	CentData	
Memory, provides an additional 16K of CMOS memory with one bus slot, battery back-up of 96 hours, and resident diagnostics.	S80 MEM	Acco	
Memory up to 256 Kbytes CMOS RAM, EPROM 16, 32, 64, 128 or 256K bit devices, maximum capacity 1 Mbyte, RAM/EPROM mix, battery backup, 8/16-bit data, 24-bit address, real-time clock.	PSM-6663	Plessey	30
Memory, 2 Kbyte DRAM, single- and double-bit error detection, single-bit correction.	CI-796-EDC-2MB	Chrislin	
Memory, 2 Mbyte DRAM, on-board parity generator/checker and error status register.	CI-8086¢2MB	Chrislin	
Memory, 16 ROM/PROM expansion board jumper selectable address board.	MIB416	MicroInds	
Memory, 32 Discrete optically coupled inputs - 5 mA @ 5V, 4 serial differential ports (transmits up to 5000 feet), 4K RAM, 8K PROM, resident diagnostics, battery back-up.	S80 I/M	Acco	
Memory, 32 Kbyte dynamic RAM, hidden refresh, 4 K bank disable, parity, 8/16 bit operation, on-board 5V generation 24-bit addressing.	MR85-032	Comark	35
Memory, 32K or 64K RAM board expansion though direct interface. Address assignable anywhere within a 16 Mbyte address space. On-board parity generator checker and error status register.	MIB032A/064A	MicroInds	
Memory, 64 Kbyte dynamic RAM expansion for 8- and 16-bit bus masters; odd/even parity checker.	rMEM64K-BE	RELMS	
Memory, 64 Kbyte dynamic RAM, hidden refresh, 4 K bank disable, parity, 8/16 bit operation, on-board 5V generation, 24-bit addressing.	MR85-064	Comark	
Memory, 64 Kbyte dynamic RAM, 8 or 16 bit jumper selectable, on-board refresh.	rMEM64K-D	RELMS	
Memory, 96 Kbyte dynamic RAM, 350-ns access, hidden refresh, 4 K bank disable, parity, 8/16 bit operation, on-board 5V generation, 24-bit addressing.	MR85-096	Comark	40
Memory, 128 Kbyte dynamic RAM, hidden refresh, 16 K bank disable, parity, 8/16 bit operation, on-board 5V generation, 24-bit addressing.	MR86-128	Comark	
Memory, 128 Kbyte dynamic RAM, hidden refresh, 4 K bank disable, parity, 8/16 bit operation, on-board 5V generation, 24-bit addressing.	MR85-128	Comark	
Memory, 256 Kbyte dynamic RAM expansion for 8- and 16-bit bus masters, on-board transparent refresh or scheduled refresh.	rMEM256K-BE	RELMS	
Memory, 256 Kbyte dynamic RAM, hidden refresh, 16 K bank disable, parity, 8/16 bit operation, on-board 5V generation, 24-bit addressing.	MR86-256	Comark	
Memory, 384 Kbyte dynamic RAM, hidden refresh, 16 K bank disable, parity, 8/16 bit operation, on-board 5V generation, 24-bit addressing.	MR86-384	Comark	45
Memory, 512 Kbyte.	V8012	Century	
Memory, 512 Kbyte DRAM, on-board parity generator/checker and error status register.	CI-8086¢	Chrislin	
Memory, 512 Kbyte DRAM, single- and double-bit error detection, single-bit correction.	CI-796-EDC	Chrislin	
Memory, 512 Kbyte dynamic RAM, hidden refresh, 16 K bank disable, parity, 8/16 bit operation, on-board 5V generation, 24-bit addressing.	MR86-512	Comark	
Memory, 128K-2 Mbyte Parity checking dynamic RAM.	CD21/2140	CentData	50
Memory, 128K-512K Parity checking dynamic RAM.	CD21/2100	CentData	
Memory, 2 Mbyte DRAM, 24-bit addressing on Multibus and iLBXbus, 8/16 bit data, EDC correcting, two I/O ports, battery backup.	PSM-2DA	Plessey	
Memory, 2 Mbyte DRAM, 8/16-bit data, 20/24-bit address, byte parity, optional 1 Mbyte.	PSM-2P	Plessey	
Memory, 2 Mbyte DRAM, 8/16-bit data, 20/24-bit address, EDC correcting, optional 1 Mbyte.	PSM-2A	Plessey	
Memory, 2 Mbyte RAM with 8 K cache, full error detection and correction, can support dedicated 32-bit memory bus.	MB-2000	Matrox	55
Memory, 512 Kbyte DRAM, 24-bit addressing on Multibus and iLBX bus, 8/16-bit data, EDC correcting, two I/O ports, battery backup.	PSM-512DA	Plessey	
Memory, 512 Kbyte DRAM, 8/16-bit data, 20/24-bit address, byte parity, optional 512 Kbyte, 128 Kbyte.	PSM-512P	Plessey	
Memory, 512 Kbyte DRAM, 8/16-bit data, 20/24-bit address, EDC correcting, optional 256 Kbyte or 128 Kbyte.	PSM-512A	Plessey	
Memory, 64 Kbyte CMOS RAM, 8/16-bit data, 20-bit address, battery backup.	PSM-6463	Plessey	
Memory,PROM/ROM expansion board. 16K to 128K capacity, address assignable anywhere within 16M byte memory, switch selectable minimum access time from 35ns to 1435ns, operation in 8 or 16 bit mode.	BLC464	MicroInds	60
Miscellaneous, Enchanced digitalker expansion module speech synthesis	BLX281A	MicroInds	

† Military Temperature Range (−55° to 125°C)

* Typical Value

MICROCOMPUTER–SUPPORT BOARDS (Cont'd)

Multibus (Cont'd)

Supported System Function	Part Number	Source
Transformation Processor (Floating point processor for graphics applications)	WTE5300	Weitek

Multimodule

Supported System Function	Part Number	Source
Controller, GPIB controller interface—complete controller/talker/listener, device driver and example application software provided.	xSBX 20	Ziatech
I/O, Parallel I/O interface—48 programmable I/O lines;optional interrupt requests and handshaking, each connector provides 8 data lines ± 12V, +5V and ground for user interfacing.	zSBX 30	Ziatech

PCbus

Supported System Function	Part Number	Source
Memory, expandable dynamic RAM designed for Zenith 150/Z-160 PC's, game port or real time clock optional with battery back-up IBM-PC compatible.	Z-150MB	Teletek
Solids Modeling Engine (graphics accelerator)	WTE7100	Weitek

Proprietary

Supported System Function	Part Number	Source
Controller, Alphanumeric video board (25x40 or 25x80).	MSB/02VID-1	Brachman
Controller, Floppy disk controller for four drives.	**MFC04**	**Wintek (2118)**
Controller, In-circuit emulator for Apple, C64, VIC20, PET, AIM65, SYM-1, KIM-1, OSI, ATARI 400/800 supports 6502, 65SC02, 65SC802.	MMC/02ICE	Brachman
Controller Motor, Dual stepper motor controller. Manipulates 2 four-phase stepping motors in a micropositioning mode; divides each step into 255 steps.	SMCC-2	IndComp
Converter, Analog-to-digital. Controls up to 15 slave converter cards. 16 A/D inputs, 16 D/A outputs.	CMC-16/8	IndComp
Converter, Analog-to-digital, 12-bit, 16 channel	**MAI04**	**Wintek (2118)**
Converter, Digital-to-analog, 8-bit, 2 channel	**MAI20**	**Wintek (2118)**
Counter/timer module with battery	**MCT10**	**Wintek (2118)**
Driver/Sensor module with 4 optically isolated inputs and 8 open-collector drivers.	**MDS44**	**Wintek (2118)**
Driver/Sensor module with 8 optically isolated inputs.	**MDS08**	**Wintek (2118)**
Driver/Sensor module with 16 open-collector drivers.	**MDS80**	**Wintek (2118)**
Expansion board, 256 Kbyte RAM, 4 serial ports, parallel printer port, real-time clock with battery backup.	SEAT 256	Slicer
I/O, AC driver board for powering ac motors. Buffer 5 solid state optoisolated ac relays. LED indicators.	8266	Cortex
I/O, Cassette tape and RS-232 interface for 6800 control module.	**MCS00**	**Wintek (2118)**
I/O, DC driver board for dc solenoids and motors. 8 buffered 5-A Darlington transistors. Can also be used for driving stepper motors.	8233	Cortex
I/O, Driver board. Optoisolation for 4 input signals and up to 9 output signals. Dc bufered; status of signals shown on LEDs 2x7805 voltage regulator on board.	8279	Cortex
I/O, IEEE-488 Bus interface	**MGP00**	**Wintek (2118)**
I/O, Parallel and Serial, 64 parallel lines and 16 control lines (TTL levels), two RS-232C I/O ports.	Cortex401	Cortex
I/O SCSI adaptor, attached to high speed bidirectional parallel for connection to hard disk controller.	DSA-4046	Davidge
I/O, 2 additional RS-232 serial ports with full two way handshake (RTS, CTS, DTR, DCD). Baud rates from 110 to 38,400. One port configured for modem (DTE).	DSX-2232	Davidge
I/O, 8-Port RS-232 serial interface.	**MSI08**	**Wintek (2118)**
I/O, 16-channel, contact-closure input module.	MBKITB16CC	MRCSys
I/O, 16-channel, relay-output terminal board.	MBKOTB16RR	MRCSys
I/O, 64-Line parallel.	**MPI08**	**Wintek (2118)**
Memory, EPROM-programming adaptor.	MMC/EPA	Brachman
Memory, Expansion module with memory mapping.	**MRR49**	**Wintek (2118)**
Memory, Expansion with sockets for 56K RAM/ROM.	**MRR19**	**Wintek (2118)**
Memory, Expansion with 30K of RAM.	**MRR39**	**Wintek (2118)**
Memory, Switchable memory board (16 Kbyte).	MSB/02SMB	Brachman
Memory, 128 Kbyte 150-ns DRAM configurable as RAM under CP/M 3.0 and as disk emulator or print buffer under CP/M 2.2.	DSX-128K	Davidge
Miscellaneous, Backplane, 4-slot.	**ABP04**	**Wintek (2118)**
Miscellaneous, Backplane, 7-slot.	APP07	Wintek
Miscellaneous, Breadboard with parallel interface	MPB00	Wintek
Miscellaneous, 16-Button Keypad with 15 7-segment displays.	**MCI11**	**Wintek (2118)**
Prototyping board.	MSB/02PRT	Brachman

Q-bus

Supported System Function	Part Number	Source
Analog input expansion.	DT2774	DataTrans
Digital to analog expander.	DT3376	DataTrans
I/O, Analog input system with up to 64 single-ended or 32 differential channels, 12-bit A/D converter.	DT1762	DataTrans
I/O, Analog input, 32 single-ended channels, 12-bit resolution, resistor-programmable gain.	MP1216	Burr-Brown
I/O, Analog input, 32 single-ended channels, 12-bit resolution, software-programmable gain.	MP1216-PGA	Burr-Brown
I/O, Analog output system with four D/A converter outputs, four digital outputs, 8-bit resolution.	DT2767	DataTrans
I/O, Analog output with four D/A converter outputs, four digital outputs, 12-bit resolution.	DT2766	DataTrans
I/O, Analog output, 4 channels, 12-bit resolution, individual D/A converters.	MP1104	Burr-Brown
I/O, Analog with 16 single-ended or 8 differential channels, 11-bit analog A/D converter.	DT2781	DataTrans
I/O, DMA Analog input system for high-level inputs, 45 kHz throughput (single channel).	DT2782	DataTrans
I/O, DMA Analog input system for low level inputs.	DT2784	DataTrans
I/O, DMA analog output system for point plotting.	DT2771	DataTrans
I/O, DMA Analog output system for point plotting.	DT3371	DataTrans
I/O, Dual-port analog output system, DMA, 12-bit resolution.	DT3366	DataTrans
I/O, Dual-ported high-level DMA Analog input system, 12-bit resolution.	DT3362	DataTrans
I/O, High level analog to digital, 16 single-ended or 8 differential inputs.	DT2762	DataTrans
I/O, High-level A/D, DMA, 12-bit resolution, up to 64 single-ended or 32 differential inputs.	DT3382	DataTrans
I/O, High-level analog to digital with 16 single-ended or 8 differential channels, 12-bit A/D converter.	DT1761	DataTrans
I/O, IEEE-488 Interface, talker, listener, controller capabilities.	DT2791	DataTrans
I/O, Isolated analog input system., 12-bit integrating A/D converter.	DT1768	DataTrans
I/O, Isolated analog system with four differential channels, 12-bit integrating A/D, 12-bit D/A converters with point plotting.	DT1769	DataTrans
I/O, Isolated low-level analog to digital, 4 differential channels.	DT2765	DataTrans
I/O, Isolated parallel digital, 16 outputs, 200 V isolation.	DT2768-1	DataTrans
I/O, Low level analog input/output with 16 single-ended or 8 differential input channels, point plotting.	DT1765	DataTrans
I/O, Low level analog, 16 single-ended or 8 differential, 12-bit A/D, two-channel 12-bit D/A converters.	DT2785	DataTrans
I/O, Low-level analog input system.	DT1764	DataTrans
I/O, Low-level analog to digital, 16 single-ended or 8 differential inputs.	DT2764	DataTrans
I/O, Parallel digital, 16 data inputs 16 latched outputs.	DT2768	DataTrans
Isolated analog input expansion.	DT2775	DataTrans
Memory, Dual port RAM and controller, 32 Kbytes standard, 128 Kbytes optional.	DT3369	DataTrans

† Military Temperature Range (−55° to 125°C)

* Typical Value

Bold face indicates additional data is provided on the page noted.

MICROCOMPUTER-SUPPORT BOARDS (Cont'd)

Supported System Function	Part Number	Source	Line
Q-bus		**(Cont'd)**	
Memory, 128 Kbyte to 2 Mbyte DRAM single- and double-bit error detection; single-bit correction.	CI-1173-EDC	Chrislin	
Memory, 128 Kbyte, 4 Mbyte DRAM, block-mode DMA, parity, CSR.	CI-1173	Chrislin	
Memory, 256 Kbyte-1 Mbyte DRAM on-board parity generator/checker and control status register.	CI-1123¢	Chrislin	
Memory, 4 Mbyte DRAM, parity, runs under PMI on the Microvax II.	CI-MIV4	Chrislin	
Memory, 8 Mbyte, DRAM, parity, runs under PMI on the Microvax II.	CI-MIV8	Chrislin	5
Multiplexer channel expansion, specify (32 single-ended or 16 differential) or (64 single-ended or 32 differential) channels.	DT2772	DataTrans	
RM-65			
Memory, Battery backup 12K CMOS RAM each of the 3-4K sections are individually addressable throughout the full address space.	GE65-12K	Golden	
S-100			
Calendar/clock/alarm board. Has long-term timing and interrupt signals for Z80, 8080, and other processors. Tone generator develops four-octave notes, long-term battery backup, auxiliary latching output.	CCA-100	IndComp	
Calendar/clock/timer board, allows time, date, day of week, to be provided to CRT display, or used for logging. Provides 1/100th second timing increments, long-term battery backup.	CCT-100	IndComp	
Color digitizer, images with up to 754 x 484 point resolution can be digitized and stored in memory or on disk.	SDD	Cromemco	10
Controller, Floppy disk controller, controls both 5-1/4 and 8-inch floppy disk drives.	LDP72	Lomas	
Controller, for both hard disk and cartridge tape.	HD/CTC	Teletek	
Controller, Graphics, IBM-PC color graphics board compatible. Allows IBM-PC programs to run on S-100 bus computers.	LDPCOLOR 1	Lomas	
Controller, 4 Kbyte ROM with read/write format capability for any combination of single or double-sided, single or double-density 5-1/4 inch or 8-inch floppy disk drives.	64FDC	Cromemco	
Converter, Analog-to-digital, supports 64 A/D inputs with 8-bit resolution.	A/D64-100	IndComp	15
Converter, Analog-to-digital, 12-bit resolution, sixteen channels with 30 μs conversion time.	ADC12	Cromemco	
Converter, Analog-to-digital, 12-bit resolution, two parallel ports with output strobe line.	DAC12	Cromemco	
Converter, Digital-to-analog, provides 64 D/A outputs with zero to 5 VDC range eight-bit converter resolution.	D/A64-100	IndComp	
Converter, seven channels of 8-bit A/D, seven channels of D/A, 8-bit parallel I/O port, 5.5 μs conversion time.	D¢7A	Cromemco	
I/O, Color graphics interface, three analog outputs for RGB monitor, 754 x 482 pixel maximum resolution, any 16 colors (of 4096) or 16 shades of gray may be displayed.	SDI	Cromemco	20
I/O, Eight serial ports for multiuser environment.	OCTAPORT	Lomas	
I/O, Eight-port multi-channel parallel interface, 8-bit ports can be used singly or coupled together to form longer word lengths.	8PIO	Cromemco	
I/O, Four-port isolated parallel interface, provides electrical isolation from host computer.	4PIO	Cromemco	
I/O, GPIB interface IEEE-488 port, Z80A processor.	GPIB	Cromemco	
I/O, Hard disk controller. Simultaneously controls 4 hard disks and does ECC and CRC generation on data fields.	HDC-1001	AdvDigital	25
I/O, Network interface (C-NET) interfaces the data channel which interconnects network stations to a 4-MHz Z-80A with program storage.	CNI	Cromemco	
I/O, OCTART, 8-channel asynchronous serial interface with 280A MPU (16 Kbytes ROM, 64 Kbytes RAM, parity modes; odd, even, none or force, interrupts for character handling, four 16-bit counter-timers.	OCTRT	Cromemco	
I/O Printer interface, for dot-matrix or letter-quality printers, interrupt capability.	PRI	Cromemco	
I/O, Serial/parallel interface, three parallel I/O ports and two serial ports.	CSP	Cromemco	
I/O, Terminal interface, alphanumeric and graphic, 80 characters x 25 lines, 512 displayable ASCII characters within 8 x 9 dot matrix.	CTI	Cromemco	30
I/O, Twin UART digital interface, two serial I/O ports, two 8-bit parallel I/O ports and ten independently programmable interval timers. Software selectable baud rates up to 76,800 baud.	TRT	Cromemco	
I/O, Winchester hard disk interface, hard disk data transfer, memory-to-memory data transfer, extended addressing.	WDI-II	Cromemco	
Memory, Controller unit. Performs error detection and correction, memory refresh control and memory cycle timing.	MCU	Cromemco	
Memory, Dynamic RAM, 256 Kbyte. Supports 8- and 16-bit data paths.	LDP256K	Lomas	
Memory, Dynamic RAM, 256 Kbyte to 2 Mbytes.	MEGARAM	Lomas	35
Memory, Static RAM, 128 Kbyte, 130-ns board access time, for high performance 16-bit systems.	RAM67	Lomas	
Memory, 16 Kbyte RAM expandable to 0.5 Mbyte with bank select. Operates at 2 or 4 MHz with no wait states.	16KZ	Cromemco	
Memory, 32 Kbyte PROM capacity, bank select and DMA in-out, up to sixteen 2716 PROMs.	32KBS	Cromemco	
Memory, 64 Kbyte RAM organized as two 32K blocks; extended bank select permits memory space expansion to 512 Kbytes in eight banks.	64KZ-11	Cromemco	
Memory, 256 Kbyte RAM read/write, CROMIX-type bank switching and 24-bit extended addressing.	256KZ	Cromemco	40
Memory, 512 Kbytes DRAM storage unit, 24 bit extended addressing, controlled by MCU.	512MSU	Cromemco	
System support board, two serial ports, two parallel ports, real-time clock, battery protected clock calendar.	HAZITALL	Lomas	
SCSI			
Controller, Disk module, provides format, read/write control, disk drive and system buffering, error-correction code generating when controlled by external microprocessor.	ADP-40	NCR	
Controller, Intelligent disk drive for up to four ST506 Winchester 5-1/4 inch drives or four flexible drives, 56-bit error-correction code, 1.5-Mb/s transfer rate to host.	ADP-41	NCR	
Controller, Intelligent tape, controls up to four streaming tape drives with Pertec interface, 64 Kbyte buffer memory with parity, 9-bit data paths, copy function, up to 1.25 Mb/s tape data transfer rate.	ADP-52	NCR	45
Controller, SCSI intelligent disk controller supports a variety of SMD-0 disk drives, up to 1 Mb/s transfer rate, 10-MHz disk transfer rate, selectable-read recovery algorithm.	ADP-44	NCR	
Controller, Tape, uses QIC-36 interface to control one 1/4-inch data cartridge tape drive, automatic error recovery, 64K FIFO buffer with parity.	ADP-54	NCR	
I/O, Flexible, multi-master I/O expansion using SCSI bus provides full SCSI (ANSC X3T9.2) and SASI compatible bus, 17 bi-directional I/O lines, 8-bit input port.	1AX	Ampro	

† Military Temperature Range (−55° to 125°C)

MICROCOMPUTER-SUPPORT BOARDS (Cont'd)

Supported System Function	Part Number	Source	Line
STDbus			
Analog input expander for additional 48 single-ended or 24 differential channels.	DT2734	DataTrans	
Bell 103 and 202 Compatible Modem.	SB8630	MicroSys	
Bus extender card, labeled test points.	ST4411	Burr-Brown	
Calendar clock, battery back-up.	MCM-CLK	WinSystems	
Calendar clock using the MM58167A, provides 24 hour clock with BCD format, on-board lithium battery for power-down operation.	MCM-CLK	WinSystems	5
Coaxial Cable Modem with UART, Data Rates to 10.2K Baud.	SB8601	MicroSys	
Controller, Alphanumeric CRT, 80x24 standard, other formats user selectable.	ST4504	Burr-Brown	
Controller, Color terminal controller, on-board Z80 with software, up to 16 colors, NTSC, PAL or RGB video, 40x24 text or 256x192 graphics.	10303	Enterprise	
Controller, disk controller for three 5 1/4 inch or 3 1/2 inch floppy disk drives with 8085, 8088, 80188, and Z80 compatibility, SCSI (SASI) compatible host adapter, on-board DMA, and off-board DMA compatibility.	ZT8850	Ziatech	
Controller, Disk drive subsystem with 3.5 inch microfloppy drive and Western Digital controller.	ipc-DISK-1	Vesta	10
Controller, disk supports up to four IBM 3740 system 34 format floppy drives, 5-1/4 or 8 inch, single- or double-sided or double density.	ST4315	Burr-Brown	
Controller, DMA (Z80).	05360	STDMicro	
Controller, Dual 3.5 inch disk drives on one card.	ipc-DISK-2	Vesta	
Controller, Floppy disk controller for 2S2D floppy disks.	SB8510	MicroSys	
Controller, Floppy disk controller with DMA and 64Kbytes DRAM.	DSTD-711	DY-4	15
Controller, Floppy disk with DMA (Z80).	05364	STDMicro	
Controller, GPIB Controller—controller/talker/listener; for use in GPIB controllers (master): includes driver software and cable.	ZT 7488/28	Ziatech	
Controller, Graphic CRT, 640x480x1 pixel resolution.	ST4505	Burr-Brown	
Controller, High resolution graphics controller, NEC-7220 based configured with 128 Kbytes video refresh memory, eight colour foreground/background.	DSTD-777	DY-4	
Controller, IEEE 488 controller, driver software available on diskette.	ZT8847	Ziatech	20
Controller, Low cost floppy disk controller.	SB8500	MicroSys	
Controller, Microfloppy disk drive controller card.	ipc-DISK-0	Vesta	
Controller, Monochromatic and colour CRT controller with memory-mapped video RAM.	DSTD-776	DY-4	
Controller, Multifunction IEEE 488 controller, includes one serial port (RS-232C); two 8-bit parallel ports, five 8-bit counter/timers and an interrupt controller; driver software available on diskette.	ZT8848	Ziatech	
Controller, Servo valve controller: mostly CMOS; on-board 8-bit DAC and servo amplifier; full STDBus compatibility +5V @ 65mA, +/- 12V @ 25mA.	STD-SVC1	Intelicom	25
Controller, Synchronous data link control (SDLC), DMA compatible.	SB8451	MicroSys	
Controller, Universal floppy disk controller with 16/20-bit DMA. 3 1/2', 5 1/4', 8' Floppies	SB8520	MicroSys	
Controller, Video display card. Offers color or monochrome alphanumeri or graphics video with "snow-free" access, display. To 96 lines, to 128 columns, resolution 640 x 240.	10301	Enterprise	
Controller, Video display generator, 64 character x 28 lines with programmable character size.	VID-64	VersaLogic	
Controller, Video display generator, 80 character x 28 lines with programmable character size.	VID-80	VersaLogic	30
Controller, Video display generator, 80 x 24 with programmable character sizes.	2220	VersaLogic	

Supported System Function	Part Number	Source	Line
Controller, Dual multiprotocol communications controller for non-Z80 processors.	SB8422	MicroSys	
Controller, Dual multiprotocol communications controller for Z80.	SB8412	MicroSys	
Controller, Four channel DMA Controller, 16-bit memory address.	SB8341	MicroSys	
Controller, Four channel DMA Controller, 20-bit memory address.	SB8345	MicroSys	35
Controller, Five channel system timing and counting.	SB8355	MicroSys	
Controller, 16 Channel Z80 Mode 2 interrupt controller, 16 Channel Counter Timer, or Combination.	SB8303	MicroSys	
Controller, 16 Channel 8085, 8088 priority interrupt Controller.	SB8301	MicroSys	
Controller, 24x80 Alphanumeric CRT controller.	SB8320	MicroSys	
Controllers, 6502 Single card computer controller with mixed RAM, ROM Sockets, 1 serial port, 2 parallel ports and 4 timers. Power fail, interrupt, and memory protection circuitry allow CMOS RAM to be battery backed.	10812	Enterprise	40
Controllers, 6809 Single card computer controller with mixed RAM, ROM Sockets, 1 serial port, 2 parallel ports and 4 timers. Power fail, interrupt, and memory protection circuitry allow CMOS RAM to be battery backed.	10809	Enterprise	
Converter, Analog to digital, 12-bit.	MCM-A/D12	WinSystems	
Converter, Analog-to-digital, 16 channels, 12-bit resolution, 4-MHz.	ST4303-16	Burr-Brown	
Converter, Analog-to-digital, 24 channels, 12-bit resolution, 4-MHz.	ST4303-24	Burr-Brown	
Converter, Analog-to-digital, 32 channels, 12-bit resolution, 4-MHz.	ST4303-32	Burr-Brown	45
Converter, Analog-to-digital, 8 channels, 12-bit resolution, 4-MHz.	ST4303-8	Burr-Brown	
Converter, DC-DC converter board	DT2715	DataTrans	
Converter, Digital to analog, 8-bit.	MCM-D/A8	WinSystems	
Converter, Digital-to-analog, 8 latched 8-bit channels.	ST4305	Burr-Brown	
Converter, four-channel, 8-bit digital to analog.	DT2727	DataTrans	50
Converter, four-channel, 12-bit digital to analog.	DT2726	DataTrans	
Converter, Triple 8-channel 8-bit analog to digital (Z80).	05340	STDMicro	
Converter, 8 Channel, 12 Bit 0-20ma D/A Plug-in.	SB8278	MicroSys	
Converter, 16 Channel, 12 Bit A/D Plug-in.	SB8277	MicroSys	
Converters, A/D Converter; CMOS 16-channel 12-bit A/D Converter card; 16 single-ended or 8 differential inputs; Input voltage -10V to +10V in four ranges; programmable amplifier.	ADC12	Intelicom	55
Data acquisition subsystem, sensor-based 16-channel single-ended and 16-channel differential inputs, 12-bit resolution.	RTI-1270	AD	
Extender card. DIP switch isolation on signal lines; ground plane shielding.	STD-SX3-A	Intelicom	
I/O, Analog I/O board, 12 bits (Z80).	MK78172-42 MK78172-56 MK78175-40	Mostek Mostek Mostek	60
I/O, Analog input board	DT2712	DataTrans	
I/O, Analog input, eight channel.	2370	VersaLogic	
I/O, Analog input, 16 single-ended, 8 differential, 12-bit A/D, CMOS STDbus.	RTI-1280	AD	
I/O, Analog input, 8 channels with 12 bit resolution and current loop inputs.	AIN-1B	VersaLogic	
I/O, Analog input, 8 channels with 12 bit resolution and noise tolerant conversion.	AIN-1A	VersaLogic	65
I/O, Analog output, four channel, 0-10V.	2390	VersaLogic	
I/O, Analog output, 4 channels, 12-bit resolution, CMOS STDbus.	RTI-1282	AD	
I/O, Analog output, 4 channels with 10 bit resolution. 0-10 volt output range.	AOUT-1	VersaLogic	

† Military Temperature Range (−55° to 125°C)

MICROCOMPUTER–SUPPORT BOARDS (Cont'd)

Supported System Function	Part Number	Source	Line
STDbus		**(Cont'd)**	
I/O, Analog subsystem combination, 16 single-ended, 8 differential analog inputs, two analog outputs, 10-bit resolution.	RTI-1225	AD	
I/O, Analog subsystem combination, 16 single-ended, 8 differential analog inputs, 2 analog outputs, 12-bit A/D, CMOS STDbus.	RTI-1281	AD	
I/O, Analog subsystem, four analog output channels, 12-bit resolution, memory mapped or port I/O selectable.	RTI-1262	AD	
I/O, Analog subsystem, 16 single-ended, 8 differential analog inputs, 10-bit resolution.	RTI	AD	
I/O, Analog subsystem 32 single-ended, 16 differential analog inputs, 12-bit resolution, memory mapped or port I/O selectable.	RTI-1260	AD	5
I/O, Analog to digital input (Z80).	MK78177-26	Mostek	
I/O, Calendar clock with battery backup using the MM58167A for the Z80C, NSC800, 80C85, and 80C88 processors. Includes a watchdog timer.	LPM-CLK-2	WinSystems	
I/O, Camera interface card; mostly CMOS interface for Reticon LC600 line scan camera; Z80 compatibility: Q5V @ 250 mA.	STD-CAM1	Intelicom	
I/O, Centronics w/Serial SBC (8088).	05822	STDMicro	
I/O, Digital I/O, 24 signal channels, three 8-bit read/write ports for 24 bidirect lines, CMOS STDbus.	RTI-1287	AD	10
I/O, Digital-Input/Output Board.	MK77672	Mostek	
I/O, Digital-Input/Output Panel.	MK77673	Mostek	
I/O, Disk interface, floppy interface board with CP/M disk operating system software package.	2010	VersaLogic	
I/O, DMA with/RS-232/449 Serial SBC (8088).	05826	STDMicro	
I/O, Dual channel STD-Z80 multiprotocol synchronous or asynchronous serial I/O with RS-232 or 20mA opto-isolated current loop. Modem control signals, supports Z80 vectored interrupts.	MCM-S102	WinSystems	15
I/O, Dual PIO (Z80).	05380	STDMicro	
I/O, Dual RS232 (DART) Serial Interface (Z80).	05370	STDMicro	
I/O, Dual RS-232-449 Serial SBC (8088).	05824	STDMicro	
I/O, Dual RS-422 serial interface with DMA.	DSTD-401	DY-4	
I/O, eight independent D/A converters with separate configurable output channels.	LPM-D/A8	WinSystems	20
I/O, FFT with/RS-232/449 Serial SBC (8088).	05825	STDMicro	
I/O, Floppy-disk controller.	MK77677	Mostek	
I/O, Floppy-disk interface (Z80).	MK78146	Mostek	
I/O, Four channel communications module with 4 RS-232C channels, asynchronous or synchronous.	DSTD-403	DY-4	
I/O, Four channel serial I/O card using 8251. Supports cascadable interrupts with an 8259 PIC RS-232 or TTL output levels	MCM-5104	WinSystems	25
I/O, four channel serial I/O using 82C51. RS-232 or TTL output cascadable interrupts supported with 82C59 PIC	LPM-SI04	WinSystems	
I/O, General purpose TTL interface, three 8-bit read/write ports control 24 bi-directional signal lines. Direct connection to industrial I/O optical isolator modules.	807	Octagon	
I/O, General purpose TTL interface, twelve 8-bit read/write ports control 96 I/O channels.	832	Octagon	
I/O, GPIB Interface—talker/listener; for use in GPIB devices (slave); includes driver software and cable.	ZT 7488/08	Ziatech	
I/O, GPIB Listener/talker/controller w/DMA (Z80).	05388	STDMicro	30
I/O GPIB w/Serial SBC (8088).	05828	STDMicro	
I/O, Hard disk interface.	MCM-HDI	WinSystems	
I/O, High performance dual serial interface with 16/20-bit DMA.	SB8416	MicroSys	
I/O, High speed parallel interface with SASI interface optional DMA, general purpose parallel interface.	DSTD-402	DY-4	
I/O, High-level analog input, 16 single-ended or 8 differential channels, 12-bit resolution.	DT2722 DT2742	DataTrans DataTrans	35
I/O, I/O Rack module interface (Z80).	05382	STDMicro	
I/O, IEEE-488 Interface, GPIB, programmable as talker, controller or listener, DMA.	ST4311	Burr-Brown	
I/O, Industrial I/O, Opto-22 type interface.	2340	VersaLogic	
I/O, Intelligent parallel, 1 Kbyte RAM 2 Kbyte EPROM, on-board Z80 processor with 8-bit TTL output, one 8-bit input port and counter/timer.	ST4394	Burr-Brown	40
I/O Intelligent 488 with Z80 on-board, Talker/listener/controller.	TBD	Mostek	
I/O, Interface card to the OPTO-22 PB-8, PB-16, and PB-24 racks.	MCM-7507	WinSystems	
I/O, Interface to OPTO-22, PB-8, PB-16 and PB-24 racks.	LPM-PI03	WinSystems	
I/O, Isolated input and relay output, 4 channels of each.	IPI-4	VersaLogic	
I/O, Isolated input and solid state relay output, 4 channels of each.	IPI-5	VersaLogic	45
I/O, Isolated input, 8 channels, up to 250 volts ac or dc with status indicators.	IPI-1	VersaLogic	
I/O, Isolated low-level analog inputs with four differential-input channels.	DT2725 DT2745	DataTrans DataTrans	
I/O, Isolated RS-422 Serial I/O.	MK77671	Mostek	
I/O, Low-level analog input, 16 single-ended or 8 differential channels, 12-bit resolution.	DT2724 DT2744	DataTrans DataTrans	50
I/O, Multichannel serial board—four independent INS 8250 UARTs; programmable baud rates to 56K; wait state generator; on-board 8259 interrupt controller; loopback diagnostic capability.	ZT 8840	Ziatech	
I/O, Multi-channel communications controller (Z80).	MK78192	Mostek	
I/O, Non-isolated RS-422 Serial I/O.	MK77676	Mostek	
I/O, Omninet transporter card providing 1 Mbyte/s RS-422 networking.	DSTD-406	DY-4	55
I/O, One asynchronous RS-232 serial port, one eight-bit TTL input and one eight-bit TTL output port; two combination 8-bit TTL I/O ports.	MCM-SP10	WinSystems	
I/O, one asynchronous RS-232 serial port, two 8-bit parallel-input, and two 8-bit parallel output ports.	LPM-SPIOA	WinSystems	
I/O, OPTO 22/Gordos compatible I/O card with 48 lines terminated bidirectional TTL, four event sense software controllable interrupts; 8 or 16-bit I/O decoding	ZT8845	Ziatech	
I/O, Parallel, four 8-bit input and four 8-bit output ports.	MCM-PI02	WinSystems	
I/O, Parallel I/O with four buffered programmable 8-bit ports with handshake. Supports Z80 mode 2 interrupts.	LPM-PIO	WinSystems	60
I/O, Parallel interface for the Opto-22 PB-8, PB-16, and PB-24 type modular racks.	MIO-24	VersaLogic	
I/O, Parallel, with 64 I/O lines total, 4MHz operation.	MCM-PI01	WinSystems	
I/O, Parallel, 24 bidirectional lines.	MCM-7507	WinSystems	
I/O, Parallel, 48 bits, user-configurable.	ST4304	Burr-Brown	
I/O, Parellel I/O, CMOS industrial interface card; 24 bi-directional lines; drives industry standard I/O Module Racks; Precision interval clock.	CMOS-PIO	Intelicom	65
I/O, PIO with Serial SBC (8088).	05823	STDMicro	
I/O, Printed circuit board for prototyping I/O circuitry	STI-DIO	Solarcom	
I/O, Printed circuit board for prototyping I/O circuitry. High Speed CMOS logic.	STI-DIO-C	Solarcom	
I/O, QIC-2 streaming tape interface module.	DSTD-408	DY-4	
I/O, Quad serial I/O card with four RS-232C serial channels.	DSTD-202	DY-4	70
I/O, Relay output card—eight relays SPST (optional mercury wetted SPST or SPDT), LED display of relay status; CPU readable relay status.	ZT 7502/10/40/or 60	Ziatech	

† Military Temperature Range (−55° to 125°C)

* Typical Value

MICROCOMPUTER–SUPPORT BOARDS (Cont'd)

STDbus (Cont'd)

Supported System Function	Part Number	Source	Line
I/O, Relay output, 8 Form C Relay outputs, switching range from 10 uA to 1A, .3A at 115 VAC, 1A at 30 VDC.	MS2300	Eltec	
I/O, Relay output, 8 channels N.O. or N.C. up to 1.25 A, CPU readback with status indicators.	IPI-2	VersaLogic	
I/O, RS-232/449. Serial w/Centronics (Z80).	05374	STDMicro	
I/O, SCSI Host adaptor w/DMA (Z80).	05386	STDMicro	
I/O, serial I/O, fully CMOS Dual UART card; two full duplex RS-232-C channels provided (DTE or DCE); programmable 50-9600 baud rate; supports mode 2 interrupts.	CMOS-SIO	Intelicom	5
I/O, Serial I/O, two-channel RS-232.	2321	VersaLogic	
I/O, Serial interface, two channels, one each RS-232 and RS-422.	SIO-2B	VersaLogic	
I/O, Serial interface, two RS-232 channels up to 19.2K baud.	SIO-2A	VersaLogic	
I/O, Serial, two channel RS232C or four 20mA, software selectable baud rate.	ST4302	Burr-Brown	
I/O, Serial, two full-duplex programmable serial I/O channels.	MCM-SI02	WinSystems	10
I/O, Serial, two serial UART channels opto-isolated current loop, jumper selectable baud rate generator for 110 to 9600 baud.	MCM-DSI/O	WinSystems	
I/O, Serial-parallel, one serial UART channel, opto-isolated current loop, jumper-selectable baud rate generator for 50 to 19200 baud.	MCM-SPI/O	WinSystems	
I/O, Signal conditioning interface, eight channels can accept inputs from a variety of sensor devices. Companion ASP for the ST4603.	ST4703	Burr-Brown	
I/O, Solid state relay output, 8 channels, up to 250 Vac at 1 A. CPU readback and status indicators.	IPI-3	VersaLogic	
I/O, STD-Z80 compatible I/O with four programmable 8-bit TTL I/O ports with handshake.	MCM-P10	WinSystems	15
I/O, STD-Z80-BUS to SASI interface.	MK77678	Mostek	
I/O, STD-Z80-BUS to SASI interface with DMA.	MK77679	Mostek	
I/O, Triple RS232/449 (DART) serial interface (Z80).	05373	STDMicro	
I/O, Two asynchronous RS-232 or opto-isolated 20mA current loop serial channels with modem control.	MCM-DS10	WinSystems	
I/O, two asynchronous RS-232 serial or opto-isolated 20mA current loop ports, selectable baud rate 110-9600.	LPM-DSIO	WinSystems	20
I/O, Two RS-232C serial channels, two parallel ports.	DSTD-201	DY-4	
I/O, Universal TTL I/O board, provides 8 ports (64 lines) of TTL I/O with readback. May be populated for input or output with readback on a port basis.	10611	Enterprise	
I/O, Winchester disk Controller Interface (SASI/SCSI).	SB8740	MicroSys	
I/O, Winchester hard disk interface to the WD1002 controller boards, includes a calendar clock using the MM58167A with battery backup.	MCM-HDI	WinSystems	
I/O, Quad channel RS422 serial interface for Z80.	SB8414	MicroSys	25
I/O, Two Channel RS232C/20mA serial interface with 256 byte bootstrap PROM socket.	SB8420	MicroSys	
I/O, Six port multi-mode parallel Interface.	SB8466	MicroSys	
I/O, 2-channel programmable Serial I/O.	MK77670	Mostek	
I/O, 4-channel 12-bit D/A.	MK77665	Mostek	
I/O, 4-channel 8-bit D/A.	MK77666	Mostek	30
I/O, 8-bit D/A converter with 8 independent input channels. Each channel has separate configurable output ranges.	MCM-D/A	WinSystems	
I/O, 120-bit successive approximation A/D converter with 16 single-ended or 8 differential inputs. On-board programmable gain instrumentation amplifier for 5 input ranges.	MCM-A/D12	WinSystems	
I/O, 12-bit successive approximation A/D converter with 16 single-ended or 8 differential inputs.	LPM-A/D12	WinSystems	
I/O, 16 optically isolated input channels, 3.5 kV isolation.	ST4306	Burr-Brown	
I/O, 16-channel high-level 12-bit A/D.	MK77655	Mostek	35
I/O, 16-channel i-bit A/D.	MK77674	Mostek	
I/O, 32 Line digital, Plug-in.	SB8276	MicroSys	
I/O, 32-bit programmable parallel I/O.	MK77650	Mostek	
I/O, 64 parallel I/O lines; four 8-bit input, four 8-bit output ports.	LPM-PI02A	WinSystems	
I/O, 64 parallel I/O lines; two 8-bit input, two 8-bit output, and four 8-bit combination ports.	LPM-PI01A	WinSystems	40
I/O, 64 parallel I/O lines organized as four 8-bit input ports and four 8-bit output ports; direct TTL interface levels.	MCM-P102	WinSystems	
I/O, 64 parallel I/O lines organized as two 8-bit input, two 8-bit output, and four 8-bit combination I/O ports, direct TTL interface levels.	MCM-P101	WinSystems	
Isolated analog input expander for 8 additional differential-input channels.	DT2735	DataTrans	
Math, Floating point arithmetic unit for simple and derived functions, 16- or 32-bit integer and 32-bit floating point modes.	ST4402	Burr-Brown	
Math, High-speed floating point math.	MK77852	Mostek	45
Memory, Accepts up to 64 K of RAM or ROM, maps anywhere in 1 Mb of memory space.	ipc-MEM	Vesta	
Memory, Battery RAM Card (2Kx8).	MK77762	Mostek	
Memory, Battery RAM Card (4Kx8).	MK77760	Mostek	
Memory, Bytewide memory module with 12 bytewide sockets.	DSTD-503	DY-4	
Memory, Byte-wide memory board—unpopulated-socketed for byte-wide RAMs, PROMs, EPROMs, EEPROMs; addressable to 1Mbyte on STD Bus; works with 5 or 8 MHz 8088, battery backup.	ZT 8820	Ziatech	50
Memory, CMOS 54 Kbyte EPROM card using 27C32 only; Z80, 8085, 6800 compatibility; bank select to 512 Kbyte; 450-ns access time.	CMOS-64K	Intelicom	
Memory, CMOS-STD BUS universal memory card with eight 28-pin JEDEC memory sockets for RAM, ROM, or EPROM's. Supports page mode or 1 Mbyte extended address decoding.	LPM-UMC	WinSystems	
Memory, EPROM and UART.	MK77753	Mostek	
Memory, EPROM Programmer, programs all 5-Vdc EPROMs.	ST4421	Burr-Brown	
Memory, fully CMOS 32 Kbyte Static RAM/ROM card: Z80, 8085, 6800 compatibility; bank select to 512 Kbyte; 250-ns access time.	CMOS-32K	Intelicom	55
Memory, High-speed Read/Write memory board with 128K, 256K, 512K, 768K, or 1Mbyte configrations, no wait states at 8 MHz, parity error detection and on-board hidden refresh.	ZT8824	Ziatech	
Memory, Magnetic bubble subsystem stores 128 K of data.	ipc-BUB-1	Vesta	
Memory, Non-volatile memory card with four 28-pin sockets for ROM EPROM or RAM.	DSTD-502	DY-4	
Memory, Program development card, combines up to 32 K battery-backed RAM, an EPROM programmer, power fail circuit and a parallel printer port.	870	Octagon	
Memory, PROM programming system for single supply EPROMS.	PS8200	MicroSys	60
Memory, STDBus Universal Memory card with eight 28-pin JEDEC sockets for RAM, ROM, or EPROM. 4MHz, supports both bank-switch or extended-address decoding.	MCM-UMC	WinSystems	
Memory, STD-Z80, 4-MHz 128K dynamic RAM card.	MCM-DRAM 128	WinSystems	
Memory, STD-Z80, 4-MHz 64K dynamic RAM card.	MCM-DRAM 64	WinSystems	

† Military Temperature Range (−55° to 125°C)

* Typical Value

Bold face indicates additional data is provided on the page noted.

MICROCOMPUTER–SUPPORT BOARDS (Cont'd)

Supported System Function	Part Number	Source	Line
STDbus		**(Cont'd)**	
Memory, STD-80188/8088/8085 compatibility; no wait states at 5 MHz; hidden memory refresh and parity with a non-maskable interrupt; supports MEMEX* bank-switching. Memory capacity also includes 512 Kbytes and 1 Mbyte.	ZY8823	Ziatech	
Memory, STD-80188/8088/8085 compatibility; no wait states at 8 MHz; hidden memory refresh and parity with a non-maskable interrupt; supports MEMEX* bank-switching.	ZT8822	Ziatech	
Memory, Universal memory accepts 2Kx8, 4Kx8, or 8Kx8 static RAM's or EPROM's.	MCM-UMC	WinSystems	
Memory, Universal Memory Card.	MK77763	Mostek	
Memory, Universal memory card with eight 28 pin JEDEC sockets, accepts RAM, ROM, EPROM, EEPROM, and Zero Power RAM. Z80 and 8088 compatible. Supports up to 512K bytes.	MEM-MAX	VersaLogic	5
Memory, Universal memory module.	SB8120	MicroSys	
Memory, Universal non-volatile memory card mixes up to 64 Kbytes of CMOS RAM, EPROM and EEPROM. Two groups of 4 sockets each may be separately addressed allowing RAM and EPROM to be in different areas of the memory map.	10764	Enterprise	
Memory, 16 Kbyte DRAM, on-board auto-refresh.	ST4203-16	Burr-Brown	
Memory, 16 Kbyte RAM or 32 Kbyte EPROM capacity, supplied with eight 2716-type EPOM devices.	ST4202-0	Burr-Brown	
Memory, 16 Kbyte RAM or 32 Kbyte EPROM capacity, supplied with 2016-type RAM devices.	ST4202-2	Burr-Brown	10
Memory, 16 Kbyte RAM or 32 Kbyte EPROM capacity, supplied without memory.	ST4202-1	Burr-Brown	
Memory, 16 Kbyte RAM universal memory module.	SB8120-16	MicroSys	
Memory, 16 Kbyte SRAM capacity, switch selectable to any 16 Kbyte boundary, supplied without RAM.	ST4201-3	Burr-Brown	
Memory, 16 Kbyte static RAM, switch selectable to any 16 Kbyte boundary, 4-MHz.	ST4201-1	Burr-Brown	
Memory, 16 Kbyte static RAM, switch selectable to any 16 Kbyte boundary, 6-MHz.	ST4201-2	Burr-Brown	15
Memory, 16K Dynamic RAM.	MK77754-0	Mostek	
Memory, 16-Kbyte RAM (Z80).	MK78109	Mostek	
Memory, 24K byte RAM, ROM, PROM board.	2160	VersaLogic	
Memory, 32 Kbyte DRAM, on-board auto-refresh.	ST4203-32	Burr-Brown	
Memory, 32K Dynamic RAM.	MK77761-0	Mostek	20
Memory, 48 Kbyte DRAM, on-board auto-refresh.	ST4203-48	Burr-Brown	
Memory, 64 Kbyte DRAM, on-board auto-refresh.	ST4203-65	Burr-Brown	
Memory, 64 Kbyte dynamic module with byte parity.	DSTD-328	DY-4	
Memory, 64 Kbyte dynamic RAM module.	SB8130-64	MicroSys	
Memory, 64K DRAM with bankswitch capability.	MK77764	Mostek	25
Memory, 64-Kbyte RAM with two PIO channels (Z80).	MK78110	Mostek	
Memory, 128 Kbyte dynamic RAM module.	SB8130-128	MicroSys	
Memory, 128/256Kbyte Dynamic RAM board—5 and 8 MHz compatibility, no wait states; on-board memory refresh; parity with a nonmaskable interrupt.	ZT 8821	Ziatech	
Memory, 128K DRAM with bankswitch capability.	MK77765	Mostek	
Memory, 256K Dynamic RAM module (8088).	05809	STDMicro	30
Memory, 256Kbyte dynamic RAM module with byte parity.	DSTD-325	DY-4	
Miscellaneous, Clock/Calendar w/Serial SBC (8088).	05827	STDMicro	
Miscellaneous, Clock/calendar with APU (Z80).	05350	STDMicro	
Miscellaneous, Interrupt expander module.	MK77967	Mostek	
Miscellaneous, Parallel video display (Z80).	MK78199	Mostek	35
Miscellaneous, Serial video display (Z80).	MK78198	Mostek	
Multifunction, accessory board; designed for real-time applications; includes AC/DC power-fail protection, real-time clock/calendar, timer, reset, indicator lights and switches.	ZT8882	Ziatech	
Multifunction, EPROM and UART with 10K ROM-based firmware module.	MK77950	Mostek	
Multifunction, System controller/diagnostics card.	MK77963-0	Mostek	
Multifunction Z80 CPU and arithmetic processor card with 9511A math processor, one serial channel, 4 channel counter/timer.	DSTD-109	DY-4	40
Multi-function, calendar-clock module with battery backup, brown-out detector, four 28-pin memory sockets, parallel port.	DSTD-703	DY-4	
Prototyping board.	STI-STD-CK	Solarcom	
Quad CTC (Z80).	05352	STDMicro	
Standard bus extender card.	STI-STD	Solarcom	
Wire-Wrap card; power and ground busing to every IC, bypass capacitors across each IC, accommodates from 14 to 40 pin ICs.	STD-WW3-A	Intelicom	45
Z80/NSC800 Adapter Module: allows Z80 In-circuit Emulator (ICE) to operate Intelicom's CMOS-CPU processor card.	CMOS-Z80/800	Intelicom	
8085/NSC800 Adapter module; allows 8085 In-circuit Emulators (ICE) to operate an NSC800 processor card.	CMOS-85/800	Intelicom	
TI Professional			
Memory, 192 Kbyte RAM expansion.	FG-115	Microlog	
Memory, 192K Expansion memory.	FG-115	Microlog	
TM990			
Controller, Floppy disk drive.	TM990/303B	TI	50
Controller, IEEE-488.	TM990/314	TI	
I/O, Analog output, 4 channel, 12-bit D/A resolution.	RT-1242	AD	
I/O, Analog output, 8 channel, 12-bit D/A resolution.	RTI-1243	AD	
I/O, Analog, 32 single-ended, 16 differential inputs, 12-bit resolution.	RTI-1240	AD	
I/O, Combination Analog, 32 single ended, 16 differential inputs, two-channel output, 12 bit D/A resolution.	RTI-1241	AD	55
I/O, High power ac and dc interface.	TM990/309	TI	
I/O IEEE (iSBX) interface.	TM990/959	TI	
I/O, Low-level analog input, supports thermocouple, RTD, strain gauge and pressure transducer interface.	TM990/315	TI	
I/O, 48 TTL compatible, input/output lines with three programmable timers, six interrupts.	TM990/310	TI	
I/O, 48 TTL lines, 24 mA sink current, on-board voltage regulator.	TM990/311	TI	60
Memory, Bubble memory card, 128 Kbyte 4 FBM43DA devices, compatible with the TM990 board.	MBC404M3T	FujitsuA	
Memory, EPROM programmer.	TM990/304	TI	
Memory, RAM/EPROM/CMOSRAM, sockets for up to 128 Kbyte EPROM, up to 32 Kbyte static RAM and CMOS RAM, battery back-up.	TM990/202	TI	
Memory, RAM/EPROM, up to 8 Kbytes EPROM, up to 32 Kbytes static RAM.	TM990/201	TI	
Memory, 16 Kbyte RAM, battery back-up.	TM990/204	TI	65
Memory, 256 Kbyte DRAM maximum with error detection, up to 16 Kbytes EPROM.	TM990/203A	TI	
Miscellaneous, Communication expansion, provides four RS232/RS422.	TM990/307	TI	
Miscellaneous, Pulse timer/event counter.	TM990/317	TI	
Miscellaneous, X.25/HDLC Communication, permits implementation of distributed industrial processing network.	TM990/308	TI	
UNIBUS			
I/O, Analog input system capable up to 64 single-ended or 32 differential inputs.	DT1712	DataTrans	70
I/O, Analog output systems with up to 8 D/A converter outputs and up to 8 digital outputs, 12-bit resolution.	DT1716	DataTrans	

† Military Temperature Range (−55° to 125°C)

* Typical Value

Bold face indicates additional data is provided on the page noted.

MICROCOMPUTER–SUPPORT BOARDS (Cont'd)

Supported System Function	Part Number	Source	Line
UNIBUS		**(Cont'd)**	
I/O, Analog, 4 differential input channels, 100 kHz throughput, 16 bit resolution, 4 channels of D/A output, on board pacer clock.	DT1777	DataTrans	
I/O, Analog, 4 single-ended channels, 100-kHz throughput, 12-bit resolution, 4 channels of D/A, 125 kHz throughput, on-board pacer clock.	DT1778	DataTrans	
I/O, Analog, 8 differential input channels, programmable gain, 12-bit resolution., 4 channels of D/A, on board pacer clock, 125 kHz throughput.	DT1771	DataTrans	
I/O, High level analog with 16 single-ended or 8 differential input channels, 12 bit D/A converter, two channel 12 bit D/A converters, up to 64 single-ended or 32 differential inputs.	DT1711	DataTrans	
I/O, Isolated analog with 4 differential inputs, 12-bit A/D, 12-bit D/A converters with point plotting.	DT1719	DataTrans	5
I/O, Low-level analog I/O system, up to 64 single-ended or 32 differential inputs.	DT1715	DataTrans	
VAX			
Memory, 1 Mbyte DRAM, ECC, runs with VAX 725, 730, and 750.	CI-V53	Chrislin	
VERSAbus			
Controller, Floppy disk controller. Controls two daisy-chained 1 Mbyte EXORdisk III disk systems (four drives).	**M68KVM20**	**Motorola (2115)**	
Controller, SASI/SCSI, Peripheral Controller (DMA).	CC-1	CharlesRiver	
Controller, Universal disk controller for up to two SMD interface-compatible hard-disk drives and up to 4 floppy disk drives.	**M68KVM21**	**Motorola (2115)**	10
Controller, Universal intelligent peripheral controller. MC68120 MPU provides serial board rates from 300 to 9600 baud, DMA, Four-port, 32-byte FIFO buffer.	**M68KVM60**	**Motorola (2116)**	
I/O, 4 serial ports, 1 parallel port.	TP-304	CharlesRiver	
I/O, 8 serial ports, with modem control signals and 24 bit parallel port.	TP-308	CharlesRiver	
I/O, 802.2/802.3 LAN interface.	NC-1	CharlesRiver	
Memory, 1 Mb, memory board with ECC error correction.	DM-1024	CharlesRiver	15
Memory, 1 Mbyte dynamic RAM, byte-parity checking, 8-16 bit addressing, separate addressable blocks of 32 Kbytes.	**M68KVM12**	**Motorola (2115)**	
Memory, 1 Mbyte RAM board; 8, 16 and 32-bit transfer supported.	CM-1024	CharlesRiver	
Memory, 2 Mb, Byte parity memory board.	CM-2MB	CharlesRiver	
Memory, 2 Mbyte RAM board; 8, 16 and 32-bit transfer supported.	CM-2048	CharlesRiver	
Memory, 4 Mb, Byte parity memory board.	CM-4MB	CharlesRiver	20
Memory, 4 Mbyte RAM board; 8, 16 and 32-bit transfer supported.	CM-4096	CharlesRiver	
Memory, 256 Kbyte dynamic RAM with ECC, byte-parity checking, 8/16 bit addressing, separate addressable blocks of 32 Kbytes.	**M68KVM11-1**	**Motorola (2115)**	
Memory, 512 Kbyte dynamic RAM with ECC, byte-parity checking, 8-16 bit addressing, separate addressable blocks of 32 Kbytes.	**M68KVM11-2**	**Motorola (2115)**	
Memory 512 Kbyte RAM board; 8, 16 and 32-bit transfer supported.	CM-512	CharlesRiver	
Memory, 1 Mbyte DRAM, 8/16 or 32-bit data, 24/32-bit address, byte parity, optional 512Kbyte or 256Kbyte.	PSM-1VP	Plessey	25
Memory, 1 Mbyte DRAM, 8/16 or 32-bit data, 24/32-bit address, EDC correcting, optional 512 Kbye or 256 Kbyte.	PSM-1VA	Plessey	
Memory, 4 Mbyte DRAM, 8/16 or 32-bit data, 24/32-bit address.	PSM-4VA	Plessey	
Memory, 4 Mbyte DRAM, 8/16 or 32-bit data, 24/32-bit address, byte parity, optional 2 Mbyte or 1 Mbyte.	PSM-4VP	Plessey	
Miscellaneous, Multi-channel communications module. Four asynchronous RS232C serial ports, 50 to 9600 bps baud rate, one parallel printer port and on-board intelligent peripheral controller.	**M68KVM30**	**Motorola (2116)**	
Multifunction, Memory, I/O, Time-of-day clock. Eight sockets for ROM/PROM/EPROM, six 8-bit parallel ports, three timer/counters, two serial I/O ports and battery-backed time-of-day clock.	**M68KVM80-1**	**Motorola (2116)**	30
Multifunction, Memory, I/O, Time-of-day clock. 128 Kbytes DRAM, eight sockets for ROM/PROM/EPROM, six 8-bit parallel ports, three timer/counters, two serial I/O ports, and battery backed time-of-day clock.	**M68KVM80-4**	**Motorola (2116)**	
VMEbus			
Controller, Advanced system control unit.	ASCU-1	Force	
Controller, Color graphics controller with 1024 x 1024 pixel resolution within 16 colors. Firmware control of industry standard graphics functions, including windowing, blanking, zoom, pseudo colors, inverse video and plot functions.	PME-GDC-1	Plessey	
Controller, Colour and monochromatic graphics display module using NEC-7220 GDC. 256K DRAM, colour look up tables, 16 colours from a palette of 4096.	DVME-778	DY-4	
Controller, combined Winchester/floppy disk controller.	PME WFC-1	PlesseyMicro	35
Controller, CRT color controller with keyboard and printer ports.	IV-1653-01	Ironics	
Controller, Direct ST506/SA460 5 1/4' Winchester floppy controller.	WFC-1	Force	
Controller, Dual Axis Servo Controller allows pulse width modulation control of two dc motors.	IV-1666	Ironics	
Controller, Ethernet Node processor/LAN controller. Interface for 10-Mbps Ethernet implementation.	IV-1620 **MVME330**	Ironics **Motorola (2110)**	40
Controller, Floppy disk controller. Word DMA or programmed byte data transfer over VMEbus.	MK75803	Mostek	
Controller, Floppy disk, programmable to control up to four single- or double-sided 5-1/4 or 8-inch disk drives of single or double capacity.	MK7803	Mostek	
Controller, Floppy disk/UIPC interface controls up to four 8-inch or 5-1/4-inch floppy disk drives, supports 4-channel DMAC and provides RS-232C serial function.	**MVME315**	**Motorola (2110)**	
Controller, GPIB controller with DMA.	**MVME300**	**Motorola (2110)**	
Controller, Graphics display processor board with 7220, 256 Kbyte display RAM, up to 40 MHz pixel rate.	IV-1651-01	Ironics	45
Controller, Hard disk controller interface. DMA can transfer up to 64 Kbyte data blocks.	MK75802	Mostek	
Controller, High speed single channel DMA controller; burst and block modes, interrupt on transfer complete or bus error, FIFO buffered 16 and 32 bit transfers.	IV-1672	Ironics	
Controller, IEEE-488 Interface Controller, with 8292-8291A talker/listener, two 8293 transceivers, slave interrupter (1-7), jumper selectable, communication; via 32 consecutive addresses.	IV-1622-01	Ironics	
Controller, Intelligent peripheral controller.	**MVME310**	**Motorola (2110)**	
Controller, Intelligent SMD winchester disk controller with 68000 CPU, faceplate LED reset. Supports two SMD compatible drives, provides error detection and correction.	DVME-715	DY-4	50
Controller, Intelligent 9-track tape controller with 68010 or 6800 CPU.	SVME-716	DY-4	
Controller, Nine track 1/2-inch tape controller, handles Pertec type interface. PE and GCR.	VME-TC50	IntSolutions	
Controller, QIC 2 tape controller.	VME-QIC2	IntSolutions	
Controller, SCSI peripheral controller with on-board 68000 and RAM.	VCC-1	CharlesRiver	

† Military Temperature Range (−55° to 125°C)

* Typical Value

Bold face indicates additional data is provided on the page noted.

MICROCOMPUTER-SUPPORT BOARDS (Cont'd)

Supported System Function	Part Number	Source	Line
VMEbus		**(Cont'd)**	
Controller, SMD Disk Controller/Formatter, supports up to two SMD disk drives, programmable 8, 16 or 32 bit wide data transfers.	IV-3275	Ironics	
Controller, System controller for use with MC68010-based MPU to provide system-level functions, on-board system clock and serial bus clock.	**MVME025**	**Motorola (2108)**	
Controller, System controller module: parallel and round robin arbiters, system clock generator, system reset generator power fail monitor, centronics parallel printer port, SCSI bus interface with DMA data transfer, two full duplex ASYNC serial ports using 68681.	IV-1673	Ironics	
Controller, Winchester/Floppy disk. Controls up to two 5-1/4-inch Winchester disk drives and up to four floppy disk drives, on-board DMA.	**MVME320**	**Motorola (2110)**	
Controller, 802.3/802.3 LAN controller.	VNC-1	CharlesRiver	5
Controller, 1024 x 1024 16-color graphics controller.	PME GDC-1	PlesseyMicro	
Converter, 14-16 bid A/D conversion module	GMSV04	GenMicro	
Digital Signal Processor, TMS320 based, 200-ns instruction cycle, 4K x 16 PROM, 4K x 16 RAM, dual 4K x 16 data buffers, dual-port access, vectored interrupt capability.	SPV100	Burr-Brown	
I/O, AC input, monitors status of up to eight 120/240 Vac sources, opto-isolated.	**MVME610**	**Motorola (2112)**	
I/O, AC output (zero crossover). Enables switching eight 120/240 Vac outputs, opto-isolated.	**MVME615**	**Motorola (2112)**	10
I/O, AC output (zero crossover). Enables switching eight 120/240 Vac outputs, phase angle control, opto-isolated.	**MVME616**	**Motorola (2112)**	
I/O, Analog input board, 16-channel 12-bit ADC.	IV-1641-01	Ironics	
I/O, Analog input/digital signal processor, 4 channels of analog input with simultaneous sampling, selectable input ranges, 12-bit resolution, optical isolation, TMS320 DSP with 200-ns instruction cycle, dual-port 8Kx16 data memory, 4kx16 program memory.	MPV960	Burr-Brown	
I/O, analog input, 8 single-ended input channels and 8 additional input channels, single-ended or differential, 12-bit resolution, 3 μs maximum throughput, selectable input ranges	MPV950D	Burr-Brown	
I/O, Analog input, 16 differential 32 single-ended, 12-bit resolution, resistor programmable gain.	MPV901	Burr-Brown	15
I/O, analog input, 16 single-ended input channels, 12 bit resolution, 3 us maximum throughput, selectable input ranges	MPV950S	Burr-Brown	
I/O, Analog output, 8 channels, 12-bit resolution, current source outputs with selectable range for each individual channel	MPV905	Burr-Brown	
I/O, Analog output, 16 channels, 12-bit resolution, unipolar or bipolar output	MPV904	Burr-Brown	
I/O, Analog subsystem, four analog-output channels.	RTI-602	AD	
I/O, Analog subsystem, 32 single-ended, 16 differential analog-input channels, 12-bit resolution.	RTI-600	AD	20
I/O, Analog, 16 differential 32 single-ended inputs, 2-channel analog output, 12-bit resolution, resistor programmable gain.	MPV901A	Burr-Brown	
I/O, Analog, 16 differential 32 single-ended inputs, 2-channel analog output, 12-bit resolution, software programmable gain.	MPV901P	Burr-Brown	
I/O, DC input module, eight input channels for 10 to 60 Vdc signal monitoring, 2500 V isolation.	**MVME620**	**Motorola (2112)**	
I/O, DC output module, eight 10 to 60 Vdc output pairs, 2500 V isolation.	**MVME625**	**Motorola (2112)**	
I/O, Dual 16-bit parallel I/O. Four independent 8-bit ports with two handshake lines per port, centronics type parallel interface outputs for two printers.	**MVME410**	**Motorola (2112)**	25
I/O, Eight port intelligent I/O board: Eight Full Duplex Multiprotocol Serial I/O Ports, on-board 68000 processor, on-board 4Kx32 bit dual-port RAM, on-board 128 Kbyte private dynamic RAM VMEbus interrupter, VMEbus master and slave interface, functions as a CPU board in multiprocessor systems.	IV-1624	Ironics	
I/O, Eight serial ports, DMA, parallel printer port, RTC option.	VM-ICP8	IntSolutions	
I/O, Eight-bit plane combiner and camera input interface: Eight bit flash converter for real-time data capture at sample rates up to 20M samples per sec., 256x8 translation table maps digital samples.	IV-1652	Ironics	
I/O, Four serial I/O channels, asynchronous operation to 19.2 kilobaud, synchronous operation to 307.2 kilobaud.	DSIO	Mostek	
I/O, Four serial I/O channels, two fixed RS232 and two selectable RS232 or RS422.	MK75801	Mostek	30
I/O, Four serial parts and 60 parallel lines. 2' x 8-inch socket area for memory and real-time clock. Optional on-board lithium battery back-up.	VME-9100D	LogicalDes	
I/O, Four-port serial I/O board; four full duplex multiprotocol serial I/O ports, VMEbus interrupter, complete VMEbus slave interface (A16, D8) with interrupter.	IV-1625	Ironics	
I/O, General-purpose I/O module, eight serial channels, twenty-four parallel lines	GMSV01	GenMicro	
I/O, IEEE-488 GPIB Interface with DMA Controller; 500 Kbytes/s data transfer speeds and talker/listener capability.	IV-1621	Ironics	
I/O, Includes IEEE-488,programmable user/interprocessor interrupts.	ASCU-2	Force	35
I/O, Intelligent multifunction I/O controller, 8 serial ports, 2 printer ports, one 16-bit parallel port.	VME-IMIO	IntSolutions	
I/O, Intelligent SASI Adapter with DMA.	PME SASI-1	PlesseyMicro	
I/O, Intelligent serial I/O Board, 8 SIO, with 68000.	IV-1624-SI01	Ironics	
I/O, Interface/controller for up to three Winchester drives (ST506 interface) and up to four IBM 3740 format single or double sided floppy drives with Shugart compatible interface.	PME-WFC-1	Plessey	
I/O, Interface for SASI controller to handle Winchester disk, floppy disk and tape drives, with 4-channel programmable DMA controller and local RS232C SIO channel for diagnostic access.	PME-SASI-1	Plessey	40
I/O, Magnetic tape interface adapter-buffer 1/2-inch 9-track, 4K bit FIFO buffer.	**MVME435**	**Motorola (2112)**	
I/O, Miscellaneous, Dual channel RS232C communications module. Two I/O channel compatible, full duplex serial I/O ports, enables synchronous/asynchronous baud rates of 50 to 19.2 kb/s as a terminal or modem.	**MVME400**	**Motorola (2112)**	
I/O, MK68000 CPU (8-MHz), one RS232 serial I/O channel.	MK75601	Mostek	
I/O, SASI bus peripheral interface adapter. Single host non-arbitrating SA400 disk controller interface for I/O channel.	**MVME420**	**Motorola (2112)**	
I/O, SCSI Host adapter.	VME-SCSI	IntSolutions	45
I/O, Sixteen serial ports, DMA, parallel printer port, RTC option.	VME-ICP16	IntSolutions	
I/O, System I/O, 144 buffered digital I/O lines	GMSV04	GenMicro	
I/O, TV Camera Input interface board, flash ADC sends video camera data via J2/P2.	IV-1652-01	Ironics	
I/O, up to eight hard disk controllers, SASI interface, byte or word DMA data transfer.	VME-NOCI	Mostek	
I/O, Up to isolated input.	PIO-1	Force	50
I/O, Up to 250Kb, synchrons.	SIO-1	Force	
I/O, VME SASI compatible interface, DMA can transfer up to 64 Kbyte data blocks, enables up to eight SASI disk controllers (hard or floppy) to interface to VMEbus.	MK75802	Mostek	

† Military Temperature Range (−55° to 125°C)

* Typical Value

MICROCOMPUTER-SUPPORT BOARDS (Cont'd)

Supported System Function	Part Number	Source	Line
VMEbus		**(Cont'd)**	
I/O, VMEbus to I/O channel interface.	**MVME316**	**Motorola (2111)**	
I/O, 6-channel Multi-protocol serial interface.	PME SID-1	PlesseyMicro	
I/O, 6-port asynchronous/synchronous serial I/O.	**MVME331**	**Motorola (2111)**	
I/O, 8 serial and dual parallel I/O card, synchronous and asynchronous RS-232C and RS-422.	DVME-201	DY-4	
I/O, 16 channel I/O channel interface. Up to 16 ac or dc solid-state relay or output signals.	M68RIO1-1	Motorola	5
I/O, 32 single ended, 16 differential Analog input, 2 Analog output lines 12-bit resolution.	ADDA-1	Force	
I/O, 68450 DMAC, 68153 Bus interrupt modules for flexible interrupt handling DPTO insolation on input and output.	OPIO-1	Force	
I/O, 6-channel SIO board with freely selectable RS232C or RS422 interface. Programmable asynchronous or synchronous operation using IBM bisync BSC, DDCMP, X3, 28, X21, SDLC, HDLC, X25 or other protocols. Software programmable rate form 110 to 38400 baud.	PME-SIO-1	Plessey	
Math, Fast Floating Point Processor with 4.5 μs speed for 32 bit floating point add, subtract, multiply.	IV-1674	Ironics	
Memory, Bytewide memory board with 32 28-pin sockets.	DVME-503	DY-4	10
Memory, CMOS RAM/ROM provides sixteen 28-pin sockets for combinations of user-supplied RAM, ROM and CMOS RAM. 1 Mbyte maximum capacity.	**MVME211**	**Motorola (2110)**	
Memory, Combination SRAM/ROM/EPROM memory board with 16 x 28 pin sockets to support 24 or 28 pin JEDEC-compatible devices for a maximum capacity of 512 Kbyte EPROM or ROM or 128 Kbyte SRAM.	PME-CRR-1	Plessey	
Memory, Control-status register, parity separate 256 banks.	DRAM-1	Force	
Memory, Dynamic RAM module, 256 Kbytes.	**MVME201**	**Motorola (2110)**	
Memory, Dynamic RAM module, 512 Kbytes.	**MVME202**	**Motorola (2110)**	15
Memory, Expansion module, 512 K or 2 MB dual-ported RAM augments V68F single board computer.	VMXF	Pacific	
Memory, Fast SRAM, separate 256 K banks, on-board battery back-up.	SRAM-2	Force	
Memory, Fast SRAM, separate 64 K banks. Active battery back-up on board.	SRAM-1	Force	
Memory management adapter board. Two to four 68451's accelerated with look-ahead circuitry, no additional wait states within a 256K segment.	IV-1600-MMx	Ironics	
Memory management CPU. MK68000 processor and MK68451 memory management unit.	MK75602	Mostek	20
Memory, Parity. 65 ns write access, expandable to 13 MB.	DRAM-E3	Force	
Memory, Programmable parity response	DRAM-2	Force	
Memory, RAM (dual ported) 512 Kbyte, 1 Mbyte, 2 Mbyte versions.	VME-HSMEM	IntSolutions	
Memory, RAM 512 Kbyte, 1 Mbyte 2 Mbyte versions.	VME-MEMI	IntSolutions	
Memory, static RAM/ROM, 16 unpopulated sockets for 28-pin and 24-pin memory devices, memory size up to 128 Kbytes per module.	MVME210	Motorola	25
Memory, Universal Board. Twenty-four universal 28-pin memory sockets for EPROM, EEPROM, ROM/RAM. Two independent memory banks, 8, 16, 32 bit data transfers, 16 Kbyte to 256 Kbyte memory chips.	IV-1612-01	Ironics	
Memory, Dual port mass memory board providing 512 Kbyte or 2 Mbytes dynamic memory.	DVME-351	DY-4	
Memory, 1 Mb Byte parity memory board.	VCM-1024	CharlesRiver	
Memory, 1 Mbyte dynamic RAM with parity, 4 way word/2 way longword interleaving. With odd-even board pairs interleaving, the effective cycle time is reduced below 333 ns.	IV-1611-1MB	Ironics	
Memory, 1 Mbyte RAM board set (2 VME boards) byte parity, 8, 16 and 32-bit transfer supported.	VEM-1024	CharlesRiver	30
Memory, 1 Mbyte x 32-bit error correcting DRAM.	PME 1EA	PlesseyMicro	
Memory, 2 Mbyte dynamic RAM with parity.	SVME-328	DY-4	
Memory, 2 Mbyte dynamic RAM with parity, 4 way word/2 way longword interleaving. With odd-even board pairs interleaving, the effective cycle time is reduced below 333 ns.	IV-1611-2MB	Ironics	
Memory, 2 Mbyte Expansion module for PME1EA.	PME DB2EA	PlesseyMicro	
Memory, 2 Mbyte Expansion module for PME2EP.	PME DB2EP	PlesseyMicro	35
Memory, 2 Mbyte RAM board set (2 VME boards) byte parity, 8, 16 and 32-bit transfer supported.	VEM-2048	CharlesRiver	
Memory, 2 Mbyte x 16-bit parity DRAM.	PME 048D	PlesseyMicro	
Memory, 2 Mbyte x 32-bit parity DRAM.	PME 2EP	PlesseyMicro	
Memory, 4 Mbyte RAM board set (2 VME boards) byte parity, 8, 16 and 32-byte transfer supported.	VEM-4096	CharlesRiver	
Memory, 16-socket SRAM/EPROM board for up to 128 Kbyte SRAM.	PME CRR-1	PlesseyMicro	40
Memory, 128 Kbyte dynamic RAM, byte-parity checking, 8/16-bit addressing, separate addressable blocks of 32 Kbytes, less than 400 ns access time.	**M68KVM10-3**	**Motorola (2115)**	
Memory, 128 Kbyte fast SRAM with battery.	PME 1285	PlesseyMicro	
Memory, 256 Kbyte dynamic RAM card, automatic refresh.	MK75701	Mostek	
Memory, 256 Kbyte dynamic RAM with parity, 4 way word/2 way longword interleaving. With odd-even board pairs interleaving, the effective cycle time is reduced below 333 ns.	IV-1611-256K	Ironics	
Memory, 256 Kbyte x 32-bit error correcting DRAM.	PME 256EA	PlesseyMicro	45
Memory, 512 Kbyte dynamic RAM with parity, 4 way word/2 way longword interleaving. With odd-even board pairs interleaving, the effective cycle time is reduced below 333 ns.	IV-1611-512K	Ironics	
Memory, 512 Kbyte Expansion module for PME 256EA.	PME DB512EA	PlesseyMicro	
Memory, 512 Kbyte expansion module for PME512EP.	PME DB512EP	PlesseyMicro	
Memory, 512 Kbyte RAM board set (2 VME boards) byte parity, 8, 16 and 32-bit transfer supported.	VEM-512	CharlesRiver	
Memory, 512 Kbyte x 16-bit parity DRAM.	PME 012D	PlesseyMicro	50
Memory, 512 Kbyte x 32-bit parity DRAM.	PME 512EP	PlesseyMicro	
Memory, 1 Mbyte DRAM memory board with EDC, 8/16/32-bit data, 24-bit address, 150 ns write and 300 ns read access.	PME-1EA	Plessey	
Memory, 128 Kbyte SRAM memory board, 8/16-bit data, 24-bit address and 140 ns read/write access. On-board lithium battery back-up provides up to 1000 hours data retention.	PME-128S	Plessey	
Memory, 16 28-Pin JEDEC sockets, 8 individually addressable banks.	RR-1	Force	
Memory, 2 Mbyte DRAM daughter board for PME 1EA, with 150 ns write access and 300 ns read access. Mounts onto mother board within VMEbus card profile, increasing capacity of PME 1EA to 3 Mbyte.	PME-DB2EA	Plessey	55
Memory, 2 Mbyte DRAM memory board with byte parity, 8/16-bit data, 24 bit address, 190-ns write access and 300 ns read access.	PME-048D	Plessey	
Memory, 2 Mbyte high-performance DRAM daughter board for PME 2EP, with 150-ns write access and 270-ns read access. Mounts onto mother board within VMEbus card profile, increasing capacity of PME 2EP to 4 Mbyte.	PME-DB2EP	Plessey	
Memory, 2 Mbyte high-performance DRAM memory with byte parity, 8/16/32-bit data, 24-bit address, 150ns write access and 270ns read access.	PME-2EP	Plessey	
Memory, 256 Kbyte DRAM memory board with EDC, 8/16/32 bit data, 24 bit address, 150 ns write access and 300 ns read access.	PME-256EA	Plessey	
Memory, 512 KB Byte parity memory board.	VCM-512	CharlesRiver	60

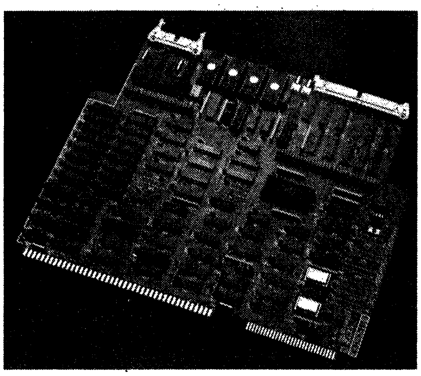
SBC-50
SINGLE-BOARD COMPUTER

AUGUST 1985

DESCRIPTION

The SBC-50 is a single-board computer based on the Fairchild F9450 microprocessor. The new SBC-50 board, the first evaluation and prototyping tool for designers of F9450 based systems, contains RAM, EPROM expansion, and serial ports and direct links to the F9450's bus signals. SBC-50 users can write and run F9450 code in real time, gaining familiarity with the chip's hardware and its MIL-STD-1750A instruction set without having to design their own boards.



FEATURES

CPU: F9450 16-bit bipolar microprocessor.

MMU/BPU: Dedicated interface to a plug-in module containing the F9451 (MMU), the map RAMs, F9452 (BPU), and the protection RAM. This optional module expands the F9450 addressing capability with the F9451 Memory Mapper, and allows block protection down to 1K segments of memory.

RAM Memory: 64K x 16-bit of high-speed static dual-port RAM. (No wait States.)

EPROM Memory: 16K x 16 bits of EPROM. Expandable to 32K x 16 bits on board.

Serial I/O: Dual asynchronous communication ports, both RS-232C-compatible (data rate programmable up to 19.2K).

I/O Expansion: iSBX™ compatible input/output bus to expand the on-board I/O through multimodule boards that plug directly into the SBC-50.

System Bus: IEEE 796 (Multibus™) compatible.

Native Bus: High speed expansion bus that permits access to the F9450 microprocessor.

Manual Control: Two momentary-contact switches that provide manual control of the SBC-50 to provide RESET and POWER DOWN (PWRDN) INTERRUPT.

Status Display: Hex display to indicate the operating condition of the SBC-50.

Software Monitor: EPROM-resident SBC-50 MONITOR, provides user control and debug of the SBC-50 through serial port 1.

Diagnostics: SBC50TEST EPROM-resident self-test program to check the operating condition of the SBC-50.

Power Supplies:
- +5 Vdc ±5% @ 11.0 A, maximum
- +12 Vdc ± 5% @ 2 5mA, maximum
- −12 Vdc + 5% @ 25 mA, maximum

Operating Conditions:

Clock Frequency: DC to maximum clock speed over the specified temperature and supply range.

Temperature:	20°C to 55°C
Humidity:	0 to 90% non-condensing

PC Board Dimensions:

HEIGHT:	10.30 in. (26.15 cm)
WIDTH:	12.00 in. (30.48 cm)
DEPTH:	0.65 in. (1.27 cm)
WEIGHT:	1 lb., 4 oz.

Connectors:
- P1: 86-pin edge connector for IEEE 796 Bus signals (mating connector part # SAE FUPH7212-86MTNE).
- P2: 60-pin edge connector for extended Multibus signals (mating connector part # AMP PES-14559).
- J1: 60-pin header connector for MMU/BPU interface.
- J2: 44-pin header connector for the iSBX Bus.
- J3: 26-pin header connector for RS-232C signals for serial ports 1 and 2.
- J4: 60-pin header connector for the Native Bus signals.

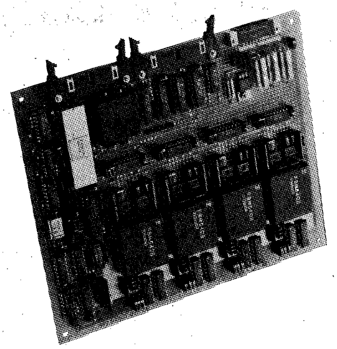
Bubble Memory Card

FUJITSU

FBC504M4P Series -
+5V Single power source
FBC504M4L Series -
+5V, +12V, −12V

Product on this page supercedes product referenced in Index.



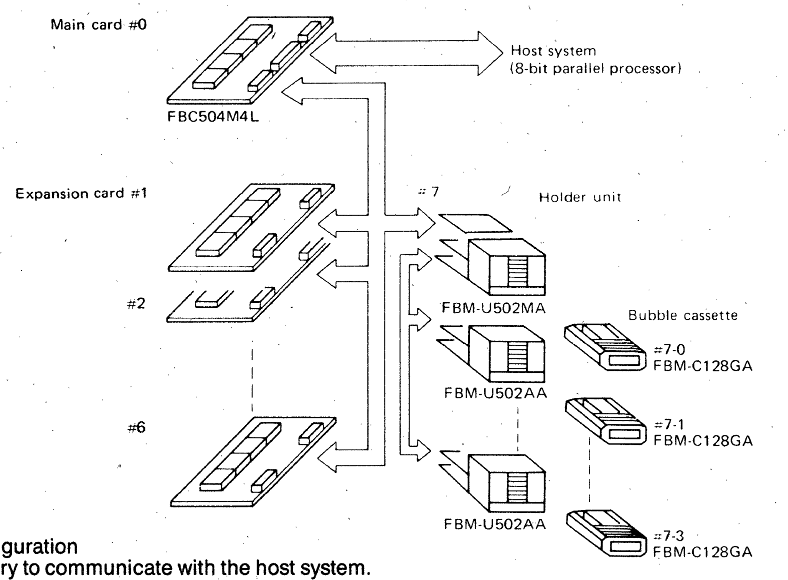
The FBC504M4P/L-series bubble memory cards, with built-in 1-megabit memory devices and control LSIs, provide easy-to-change non-volatile high density memory for a variety of applications. Memory capacities from 128 kilobytes to 4 megabytes can be selected, and cassette systems are also available. With Fujitsu bubble memory cards, file memories can be designed for improved system functions and reliability.

FEATURES

- **Maintenance-free**
  Maintenance is unnecessary because of no moving parts and no battery backup.
- **+5V single or triple power sources**
  Both the popular +5V single power source and the +5V, +12V, and -12V triple power source are available.
- **Wide variety of memory capacities**
  Basic memory capacities of 128KB, 256KB, and 512KB can be expanded by connecting 512KB expansion cards for a total memory capacity of up to 4MB.
- **1-megabit bubble cassette system**
  Data sharing and JOB modification can be easily performed by connecting the 1-megabit bubble cassette system.
- **Error correction function**
  In addition to the ECC error correction function, bus parity is provided for detecting errors due to noise on the bus.
- **A wide variety of commands**
  The card has a total of 24 commands, including R/W, SEEK (high-speed access), ABORT (access interrupt), and READ WRITE CHECK (self diagnosis).
- **Useful sub pages**
  Three sub pages can be added to the 128K-byte data area for storing system control data etc.
- **New defective loop information storage method**
  The boot loop method is used to store defective loop information, thereby minimizing initialization time.

SYSTEM CONFIGURATION (EXAMPLE)

- **4M-byte memory system composed of 7 memory cards and 4 holder units. (Triple power source)**



Note:
Restrictions on system configuration
- One main card is necessary to communicate with the host system.
- Expansion cards and holder units (FBM-U502MA) can be combined as desired, but only up to seven cards or units.
- Only up to three FBM-U502AA holder units can be connected to FBM-U502MA.

• Main card

This Main card has an 8-bit parallel interface for communication with the microprocessor, and includes a 1-megabit bubble memory device (FBM54DB) and control circuits. The memory capacity can be selected from 128K-bytes, 256K-bytes, or 512K-bytes.

Model	FBC501M4P/L	FBC502M4P/L	FBC504M4P/L
Chip used	FBM54DB		
Number of devices	1	2	4
Memory capacity	128K bytes	256K bytes	512K bytes
Interface	8-bit parallel (DMA available)		
Mean access time	12.5 ms (Seek time: 2.6 ms)		
Transfer method	64-byte block transfer		
Transfer rate	100K bits/s		
Temperature range Operation Non-volatile storage	 0°C to 50°C −40°C to 85°C		
Withstanding exterior magnetic field Operation Non-volatile storage	 20 Oe (max) 50 Oe (max)		

• Expansion card

The expansion card is used to expand the memory capacity greater than 512K bytes. Since the main card can be easily connected with flat cables, memory can be expanded even during operation. Expanded memory can be accessed using serial addresses (page addresses) from the main card.

Model	FBC504D4P/L
Chip used	FBM54DB
Number of chips	4
Memory capacity	512K bytes
Temperature range Operation Non-volatile storage	 0°C to 50°C −40°C to 85°C
Withstanding exterior magnetic field Operation Non-volatile storage	 20 Oe (max) 50 Oe (max)

• Holder unit and bubble cassette

The FBM-U502MA/MU holder unit can be directly connected to the main card. The FBM-U502AA is used for FBM-U502MA/MU when two or more holder units are used.

When memory cards and the cassette system are combined, not only data can be filed or shifted offline, but programs stored in memory cards can be modified with ease.

Model	FBM-U502MA/MU	FBM-U502AA
Cassette used	FBM-C128GA	
Memory capacity	128K bytes/cassette	
Temperature range Operation Non-volatile storage	 0°C to 50°C −40°C to 85°C	
Withstanding exterior magnetic field Operation Non-volatile storage	 20 Oe (max) 50 Oe (max)

Product on this page supercedes product referenced in Index.

APPLICATIONS

- Program loader for terminal
- NC and robots
- Equipment for vehicles, vessels and aircraft
- Measuring instruments
- Personal computers and debugging too
- Equipment installed outdoors
- Portable equipment

The Fujitsu 1 Megabit Bubble Cassette System is an entirely new type of external memory system. The system is completely maintenance-free, and features high-speed average access time of 12.5 ms. The cassette itself is compact, lightweight, and easy to install and operate.

FEATURES

- **Maintenance-free**
  Maintenance is unnecessary because the system has no mechanical parts. The memory media is solidly housed, and never worn out.
- **Fast access**
  Average access time is 12.5 ms, and can be shortened to 2.6 ms by using the SEEK command.
- **Multi-purpose interface, DMA capability**
  The 8-bit parallel interface allows connection to any microprocessor.
- **Single or triple power sources**
  Both the popular +5V single power source and the convenient +5, +12, −12V triple power source are available.
- **Error correction function**
  In addition to the ECC error correction function, bus parity is provided for detecting errors due to bus noise.
- **Wide variety of command**
  The system provides a total of 24 commands, including READ/WRITE, SEEK (high-speed access), and ABORT (access interrupt).
- **Useful sub-pages**
  Three sub-pages can be added to the 128K byte data area for storing system control data etc.
- **Expandable memory capacity**
  The memory capacity can be expanded up to 512K bytes by adding expansion holder units.
  · FBM-U502GA + FBM-U502AA (maximum three units each)
  · FBM-U502GU + FBM-U502AA (maximum three units each)
- **Cassette eject function**
  Cassettes can be ejected by simply pressing the eject button on the holder unit.

Power supply capacity (maximum)

	FBM-U502GA	FBM-U502GU	FBM-U502AA
+ 5V ± 5%	750 mA [500 mA]	2.8A [1.3A]	210 mA [150mA]
+12V ± 5%	70 mA [40 mA]	—	70 mA [40 mA]
−12V ± 5%	330 mA [80 mA]	—	110 mA [80 mA]

Note: Values in parentheses are typical values at standby.
In case of single power source units, current for the FBM-U502AA is supplied from the FBM-U502GU. So current for the FBM-U502GU increases by A [A] for each FBM-U502AA connected.

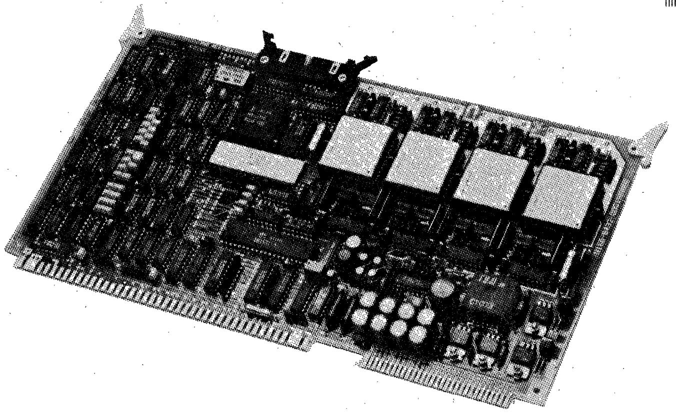
IEEE796 Bubble Memory Card

FUJITSU

FBC501M4M: 128K bytes
FBC502M4M: 256K bytes
FBC503M4M: 384K bytes
FBC504M4M: 512K bytes

Product on this page supercedes product referenced in Index.



Fujitsu's FBC504M4M-series bubble memory cards are high-density memory cards with system buses that are compatible with the IEEE796 standard. The FBC504M4M-series bubble memory cards, with built-in 1M-bit bubble memory devices, allow a user to solidify file memory, improve system functions, upgrade reliability, and reduce maintenance costs.

FEATURES

- **Non-volatile memory**
  Data is retained even when power is off.
- **Maintenance-free**
  Fujitsu's bubble memory is maintenance-free — there are no movable parts, and battery backup is not necessary.
- **High-speed access**
  The average access time of bubble memory is 12.5 ms, faster than floppy disks.
- **Massive storage capacity**
  Bubble memory storage capacity is 128K bytes, 256K bytes, 384K bytes, or 512K bytes. Memory capacity can be expanded up to 4M bytes by using extension ports.
- **1M-bit bubble cassette connectable**
  By connecting a bubble cassette, the user can change jobs or transfer data offline easily.
- **8-bit/16-bit data bus**
  An 8-bit or 16-bit data bus can be selected.
- **+5V single power source**
  Since the cards operate from a single +5V power source, designing a power supply is easy. And Power Fail circuit is built in.
- **Error correction function**
  Burst errors of up to 3 bits can be corrected by ECC.
- **Built-in DMA controller**
  Each board has a DMA controller equivalent to the 8257.

SPECIFICATIONS

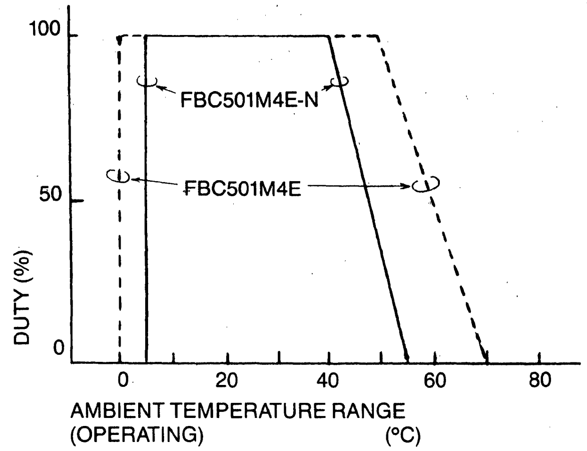
128K Byte Bubble Memory Card

FUJITSU

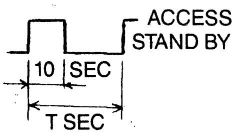
FBC501M4E
FBC501M4E-N

Product on this page supercedes product referenced in Index.

OPERATING AMBIENT TEMPERATURE RANGE



(CONDITION)



$$\text{DUTY} = \frac{10}{T} \times 100\ (\%)$$

USUALLY ABOUT 10 SEC TO READ OR WRITE ALL 1M BIT.

The FBC501M4E (-N) bubble memory card, with its built-in 1M bits bubble memory chip and unique control circuit, provides 128K bytes of easy-to-change nonvolatile memory. Measuring only 10 cm x 10 cm, this card is ideal for use in compact equipment, such as a mini-file or program memory.

FEATURES

- **Maintenance-free solid file**
  Maintenance is not necessary because the card has no moving parts and does not require battery backup.
- **General-purpose interface and DMA**
  The 8-bit parallel interface enables easy connection to any microprocessor.
- **Error correction function**
  In addition to the ECC error correction function, a bus parity check is also provided to detect errors resulting from noise on the bus.
- **A wide variety of commands**
  The card has a total of 24 commands, including R/W, SEEK (high-speed access), and ABORT (emergency stop).
- **Useful sub-pages**
  Three sub-pages can be added to the 128K-byte data area to store system control data.
- **New method for storing defective loop information**
  The boot loop method is used to minimize initialization time.

VMEmodules

Motorola takes the power of the M68000 Microprocessor Family, combines it with VMEbus — the accepted world standard in microsystem architectures — and implements this powerful combination in a broad line of modular products that offer a wide range of systems capabilities. VMEmodules utilize the Eurocard form factor; allow the interconnection of 8-, 16-, and 32-bit processors and peripherals; and are supported by the high-performance VERSAdos Real-Time Operating System. At this printing, well over 1000 VMEbus-compatible products are offered by more than 200 international vendors.

Eurocard Format Developed as the standard in Europe, this card format is gaining world-wide acceptance in modular applications in a broad range of engineering, laboratory, and industrial automation environments. Both single high (160 x 100mm) and double high are defined, offering (160 x 233.4mm) formats and card cages, a convenient size, and 96-pin/socket DIN connectors provide an extra margin of reliability.

8-/16-/32-bit VMEbus The VMEbus does not limit designers to today's technologies; its inherent flexibility and capabilities allow adaptation to any number of types of popular processors for true multi-processing applications. It allows mixing of as many bus masters as desired. The VMEbus enables mixing of 8-, 16-, or 32-bit processors in the VME backplane, operating at high speeds, asynchronously, and providing seven interrupts and four levels of bus priority arbitration.

RMS68K and VERSAdos Software Support VMEmodule products are designed for accurate response to multiple random events. The RMS68K Real-Time Multitasking Executive Software for the VMEmodule Monoboard Microcomputer provides a nucleus for real-time applications. Where large data files and mass storage resources are required, the full-featured VERSAdos Operating System provides efficient execution.

Multiple Worldwide Sources Development of the VMEbus represents the combined technical efforts of Motorola and a number of other major international electronics companies (Signetics/Philips, and Mostek for example). An increasing number of companies are joining the original participants in supplying a wide variety of compatible products. These sources are united by the VMEbus International Trade Assocation meeting four times each year to ensure continued compatibility from a diversified list of suppliers.

VMEmodules allow you to maximize your engineering time by elevating your designs from component level complexity to board-level simplicity. Quickly. Efficiently. And with the assurance of high-performance, proven reliability, and upward compatibility. VMEsystem: the design solution that not only challenges today's technological limits, but anticipates tomorrow's progress as well.

System Controller VMEbus Modules

MVME025 VME Slot 1 System Controller Module providing round-robin and priority VMEbus arbitration, power-up reset, system clock, and bus time-out logic. The board is designed to be used with MVME120 series processor modules.

MVME050 VME Slot 1 System Controller and Utility Module. The board provides priority VMEbus arbitration, power-up reset, system and serial bus clocks and bus time-out logic. The utility functions include global interrupt generation, real-time clock/calendar, printer port, two sync/async serial ports, and a two-digit hexadecimal diagnostic display. Eight sockets are available for diagnostics or system memory. MVME050 is designed to work with MVME120. MVME701 I/O Transition Module is available to simplify serial and parallel port expansion.

MC68000 CPU VMEbus Modules

The MC68000 is the first member of the Motorola Family of advanced 16/32 bit microprocessors. It is a fully-implemented 16-bit microprocessor with 17 general purpose 32-bit data and address registers. The MC68000 possesses an asynchronous bus structure with non-multiplexed 24-bit address bus and 16-bit data bus. This provides for a direct addressing range of 16 megabytes.

MVME101 VMEbus Monoboard 8 MHz MC68000 Microcomputer with two serial ports and two parallel I/O ports; includes 8 sockets for 2K to 32Kbyte RAM/ROM devices, 16 bidirectional parallel I/O lines, three off-board-accessible programmable 16-bit counter/timers, hexadecimal LED status display, and seven interrupt levels with bus arbitration. Designed to serve as a system controller (slot 1).

MVME110-1 VMEbus Monoboard 8 MHz MC68000 Microcomputer with one serial port, includes 8 sockets for 2K to 32Kbyte RAM/ROM/EPROM devices, I/O Channel interface, three off-board-accessible programmable 16-bit counter/timers, run/halt/fail LED status lights, and seven interrupt levels with bus arbitration. Designed to serve as a system controller (slot 1).

MC68010 CPU VMEbus Modules

The MC68010 is the virtual memory version of the MC68000 microprocessor. Its internal architecture, instruction set and bus structures are identical to the MC68000, making the MC68010 fully upward object code compatible. In addition to all of the resources of the MC68000, the MC68010 offers high speed loop-mode operation which allows for faster execution of tight software loops. The added features of virtual memory support and enhanced instruction execution timing make the MC68010 one of the fastest and most versatile MPUs on the market.

MVME117-1 VMEbus Monoboard 10 MHz MC68010 Microcomputer with 128Kb of zero wait-state DRAM, four sockets for up to 256Kb EPROM, two serial ports, two parallel ports, and real-time clock with on-board battery, optional SCSI™ bus interface, socket for MC68881 Floating Point Coprocessor, designed to be used as System Controller (slot 1).

MVME117-2 Same as MVME117-1 except no SCSI bus interface.

MVME117-3 Same as MVME117-1 except 512Kb Dynamic RAM.

MVME117-3FP Same as MVME117-3 with the addition of MC68881.

MVME117-4 Same as MVME117-3 except no SCSI bus interface.

MVME120 VMEbus Processor Module with 10 MHz MC68010 CPU, MC68451 Memory Management Unit, 4Kb zero wait state CACHE Memory, 128Kb dual-ported Dynamic RAM with byte parity, one serial port, three 16-bit timers, and two sockets for 2K x 8 to 64K x 8 byte EPROM (user provider). MVME025, MVME050, or other VMEbus System Controller required.

MVME121 Same as MVME120 except 512Kb Dynamic RAM.

MVME122 VMEbus Processor Module with 12.5 MHz MC68010 CPU, 128Kb of dual-ported Dynamic RAM, three 16-bit timers, and two sockets for 2K x 8 to 64K x 8 bytes EPROM (user provided). MVME025, MVME050, or other VMEbus System Controller required.

MVME123 Same as MVME122 except 4Kb zero wait state CACHE memory and 512Kb dual-port Dynamic RAM.

MC68020 CPU VMEbus Modules

The MC68020 is the newest member of the M68000 Family. While it is the first complete, commercially available 32-bit microprocessor and has several features which make it unique, the MC68020 is fully upward object code compatible with all members of the M68000 family. It has non-multiplexed 32-bit address and data buses with innovative techniques to improve bus efficiency, an enhanced instruction set and instruction cache for high-speed performance advantages, and new instructions and addressing modes for improved operating system support. These features combine with an embedded coprocessor interface to help establish the MC68020 as the performance standard for 32-bit micro systems.

MVME130 VMEbus Monoboard 12.5 MHz MC68020 Microcomputer with sockets for MC68881 Floating Point Coprocessor and MC68851 Demand Paged Virtual Memory, MVMX32bus interface, full 32-bit address and data, dual multiprotocol serial I/O ports, programmable timer, and sockets for two 24/28 pin ROM/EPROM devices.

MVME130COF Same as MVME130 with the addition of MC68881 Floating Point Coprocessor.

MVME130DON Same as MVME130 except 16.67 MHz clock.

MVME130DOF Same as MVME130COF except 16.67 MHz clock.

MC68020 CPU VMEbus Modules — continued

MVME131 Same as MVME130 with the addition of Demand Paged Memory Management Module (M68KVMMB).

MVME131COF Same as MVME131 with the addition of MC68881 Floating Point Coprocessor.

MVME131DON Same as MVME131 except 16.67 MHz clock.

MVME131DOF Same as MVME131COF except 16.67 MHz clock.

Memory Expansion Modules

MVME201 VMEbus 256Kbyte Dynamic Memory Module featuring byte parity checking and user selectable memory map assignment.

MVME202 VMEbus 512Kb Dynamic RAM Memory Module featuring byte parity checking and user selectable memory map assignment.

MVME222-1 Same as MVME202 except 1Mb Dynamic RAM.

MVME222-2 Same as MVME202 except 2Mb Dynamic RAM.

MVME204-1 VMEbus 1Mb Dynamic Memory Module with MVMX32bus interface, dual-ported interleaved, byte parity and error checking. Designed to be used with MVME130/131 Series.

MVME204-2 Same as MVME204-1 except 2Mb Dynamic RAM.

MVME205 VMEbus 1Mb Dynamic RAM with byte parity and full A32/D32 VMEbus interface with user selectable memory map assignment.

MVME211 VMEbus Static RAM/ROM Module for added memory-mapped program (up to 1Mb); provides 16 sockets for 24/28-pin user supplied memory devices (SRAM or EPROM); device access time is selectable from 35 to 510 ns.

MVME214 VMEbus Static RAM/ROM Module for added memory (up to 1Mb); provides 16 sockets for 24-/28-pin user supplied memory devices; device access time is selectable from 100 to 400 ns, MVMX32bus Interface. Designed to be used with MVME130/131 Series.

VMEbus Interface Controllers

MVME300 VMEbus GPIB IEEE-488 Listener/Talker/Controller Module using DMA interface for burst or byte mode data transfer rates to 500Kbytes/sec., includes error checking and status display.

MVME310 VMEbus Intelligent Peripheral Controller Module based on MC68121 device enables custom peripheral interface implementation via serial port and header accessible interface signals; provides large wirewrap area and for up to 32Kb of dual ported static RAM buffer (4Kb supplied) and up to 32Kb of RAM/ROM/EPROM, and custom user application logic.

MVME315 VMEbus Intelligent Peripheral Interface, provides control for up to four SS/DS, DS/DD floppy disk drives, support for 4-channel DMA, 8Kb of dual ported RAM with controller, a SASI bus interface, a peripheral interrupt controller with full VMEbus interface and interrupt control, and a universal interface controller (MC68121) with RS-232C serial port; control firmware for support of a XEBEC Winchester Controller on the SASI interface is provided in two 8Kb PROMs.

MVME319 VMEbus Intelligent Floppy/Tape Controller and SASI/SCSI Interface Module based on the MC68121. This module enables control of cipher floppy-tape, 8 inch or 5¼″ floppies in any combination; supports up to eight mini-Winchester controllers via a XEBEC or Adaptech SASI/SCSI interface; DMA controller; 32Kb dual-ported RAM with controller; control firmware provided in two 8Kb ROMs.

MVME320-1 VMEbus Intelligent Winchester/Floppy Disk Controller Module provides high performance data channels between System memory and ST506 Winchester and/or floppy disk drives; up to two Winchester and two floppy disk drives or four floppy disk drives.

MVME330 VMEbus Ethernet Node Processor/LAN Controller Communications Module provides high performance for 10Mbps Ethernet interface, incorporates MC68000 MPU, the MK68590 LANCE Ethernet Controller, the AM7991 Serial I/O Adapter; and onboard EPROM containing power-up self-test routines plus kernel software giving data transfer rates up to 200 1Kbyte packets/second. Available with network software including XNS host resident utilities, drivers and XNS protocol software for UNIX SYSTEM V/68 and VERSAdos. Consult factory for details of ordering information for additional software.

VMEmodules — continued

VMEbus INTERFACE CONTROLLERS — continued

MVME331 VMEbus Intelligent Communications Controller with six serial I/O ports, configurable for synchronous or asynchronous and for either RS-232C or RS-422 electrical protocols. MVME705 or MVME706 Transition Modules available. Onboard intelligence includes MC68010 CPU at 10 MHz, with two sockets for firmware, and 128Kb of Dynamic RAM for data buffering. This module also has firmware for implementing asynchronous protocol on all six channels (up to 9600 baud bidirectional on all channels simultaneously).

MVME332 VMEbus Intelligent Communications Controller with eight serial I/O ports for asynchronous RS232C protocols. Onboard hardware includes MC68010 at 10 MHz, two sockets for firmware, and 128Kb of Dynamic RAM for data buffering.

MVME333 Same as MVME331 with the addition of a high-speed bidirectional DMA on two of the channels for high-speed (up to 1Mb/second) synchronous protocols, i.e. X.25 packet switching networks.

MVME360 VMEbus SMD Disk Controller Module supports up to 24 Mbps transfers for SMD or XSMD with one-to-one interleaving, ECC, zero latency read/write, intelligent CACHE algorithm, ultra high speed DMA, A24/A32:D32/D16.

MVME370SET-1 VMEbus to MAP Network Intelligent Interface Modules. A two board set comprising controller and modem boards, a 16-bit microprocessor, 128Kb DRAM, MAP 2.1 Layers 1–4 software, MAP 2.1 channel group 3′/4′/P/Q, Token Bus logic supported under UNIX SYSTEM V Operating System on 5¼″ diskette.

MVME370SET-2 Same as MVME370SET-1 except MAP 2.1 channel group 4A′/5′/R/S.

MVME370SET-3 Same as MVME370SET-1 except MAP 2.1 channel group 6′/FM1′/T/U.

MVME370KIT-1 VMEmodule MAP Network Developer's Kit. Network Developer's Kit including all the elements (Head-end Remodulator, coax, taps) required to implement a two-node MAP network.

MVME370KIT-2 VMEmodule MAP Network Developer's Kit. Same as MVME370KIT-1 except will handle a four-node implementation.

MVME372 VMEbus Advanced MAP Interface Controller. High performance VME-compatible 10 Mbps MAP network controller implementing all seven layers of the MAP 2.1 protocol. Available mid 1986.

VMEbus to I/O Channel Module

MVME316 VMEbus to I/O Channel Interface Module that translates addresses and interrupts; and buffers data between the VMEbus and I/O channel. The module configures the I/O channel as a global resource that is accessible by only VMEbus master.

VMEbus Modules

MVME340 VMEbus Parallel I/O Module provides 64 parallel I/O lines; three 24-bit timers; three interrupters; one 32-bit and one 16-bit data channel or any combination of 16-bit and 8-bit data channels; 4Gb, 16Mb or 64Kb address range.

MVME350 VMEbus Intelligent Streaming Tape Controller with on-board MC68010 with buffer and firmware control to handle QIC-02 Format ¼″ Cartridge Tape Drives.

MVME390 VMEbus Graphics Display Controller for direct bit-mapped display control from the VMEbus. The controller can be used for up to 1024 x 1024 pixel displays at 60 Hz refresh in the non-interlaced mode for very high resolution flicker free displays. Other display resolutions are possible through programming changes. Two board set for both color and monochrome monitors.

MVME390-1 Same as MVME390 except only the monochrome monitor controller module is offered.

I/O Channel Modules

Motorola provides I/O Channel modules on single-high Eurocard boards to provide a wide range of system flexibility for I/O expansion at low incremental cost. The I/O Channel has a 12-bit address bus, an 8-bit bidirectional data bus, 4Kbytes of memory-mapped I/O, and a data transfer rate of up to two Megabytes per second. In addition to providing more modularity between the main processor and the I/O controllers, use of the I/O Channel increases overall system performance by allowing most lower-speed I/O activity to take place in the I/O Channel rather than on the system bus.

I/O CHANNEL MODULES — continued

MVME400 Dual Channel RS-232C Communications Module, provides two I/O Channel compatible, full duplex, serial I/O ports; software and jumper selection enables sync/async baud rates of 50 to 19.2K-bits as a terminal or modem.

MVME410 Dual 16-Bit Parallel I/O Module provides four independent 8-bit/2-handshake-bit (40 lines) using two fully buffered MC6821 PIAs, two 50-pin outputs provide Centronics type parallel interface for two printers; jumpers enable selection of interrupt priority, channel I/O designation, I/O bit for software controlled fail LED, and PIA control.

MVME420 SASI (Shugart Associates System Interface) Bus Peripheral Interface Adapter Module, provides single host nonarbitrating SA400 disk controller interface for I/O Channel.

MVME435A Magnetic Tape Interface Adapter Module, provides buffered ½″ 9-track, 4K-bit FIFO buffer and interface for two industry standard PERTEC compatible 9-track 800/1600 bpi magnetic tape formatters, each controlling four 25-/125-ips tape drivers in start stop mode.

MVME600 12-Bit A/D Converter Module, provides 8/16 differential/single-ended channels with four full scale input voltage ranges of 0.5, 1, 5, or 10 volts; the 16-channel multiplexer will accept additional inputs from up to five MVME601 expander input cards.

MVME601 A/D Input Expander Module provides 8/16 differential/single-ended channels for input to the MVME600 module.

MVME605 12-Bit D/A Converter Module, provides four channels of 12-bit D/A conversion with five voltage output ranges of 0–0.5, 0–10, ±2.5, ±5, and ±10 volts and two current loop output ranges of 4 to 20 mA and 10 to 50 mA.

MVME610 AC Input Module, monitors status of up to eight 120/240 Vac sources; max input it 300 Vac with isolation to 2500 Vac.

MVME615 AC Output Module (Zero Crossover), provides means of switching eight independent outputs of 120/240 Vac; maximum current switching is 3 amps rms.

MVME616 AC Output Module, same as MVME615 but without zero crossover switching.

MVME620 DC Input Module, provides eight input channels for 10 to 60 Vdc signal monitoring, inputs have 2500 volt isolation and provide input overvoltage and transient protection.

MVME625 DC Output Module, provides eight 10 to 60 Vdc output pairs, each with 2500 volt isolation, inductive load transient suppression, and overcurrent protection, 2 amps max.

I/O Transition Modules

MVME701A I/O Transition Module double-high 80mm Eurocard, DIN to DB25 and 50-PIN dual row header provides connector for MVME050 serial and parallel ports; and battery back-up for MVME050 time-of-day clock (user installed).

MVME705 I/O Transition Module double-high 80mm Eurocard format for six-channel serial transceiver module. Each channel can be independently configured for the RS-232C or RS-422 standard. Sockets are provided on the board to insert RS-232C or RS-422 driver and receiver devices. These devices are provided with the module. Free space is available for the user-supplied slew-rate limitation and noise filtering capacitors. Designed to be used with MVME331, MVME333.

MVME706 Same as MVME705 except all channels are already RS-232C standard available.

MVME707 MVME130 RS-232C distribution board with dual RS-232C Serial I/O Cable Assembly. Designed to be used with MVME130/131.

MVME708-1 I/O Transition Module for MVME117 series provides standard connectors for serial port, parallel port, and SCSI bus interface.

Packaging Accessories

MVME820 Plug-in mass storage module for MVME943 chassis includes 15Mb Winchester hard disk drive and 655Kb DS/DD 5¼″ floppy disk drive. A Winchester/Floppy Disk Controller Module is required (see MVME320).

MVME821 Plug-in mass storage module for MVME943 includes two 655Kb DS/DD 5¼″ floppy disk drives. A Floppy Disk Controller Module is required (see MVME315 or MVME320).

MVME822 Plug-in Mass Storage Module for MVME943-1 Chassis includes 40Mb Winchester hard disk drive and 655Kb DS/DD 5¼″ Floppy disk drive. A Winchester/Floppy Disk Controller Module is required (see MVME320).

MVME910-3 VMEmodule 200 Watt Switching Power Supply Module, provides +5 Vdc @ 30 Amps, +12 Vdc @ 3 Amps, and −12 Vdc @ 1 Amp; includes overvoltage and overload protection. Front chassis plug-in.

VMEmodules — continued

PACKAGING ACCESSORIES — continued

MVME920A VMEbus Backplane, provides 20 DIN 41612C 96-pin VMEbus sockets for use with signals up to 20 MHz; includes power and ground connections, and bus terminator.

MVME921A VMEbus Backplane, same as MVME920 except provides 9 DIN 41612C 96-pin VMEbus sockets.

MVME922A I/O Channel Backplane provides 5 DIN 41612C 96-pin I/O Channel sockets (will accept five single-high I/O Channel Eurocard modules).

MVME930 VMEbus Extender Module, double-high, provides identification of each P1 trace with shorting jumpers.

MVME931-1 VMEbus Wirewrap Module, double-high, with ground plane; provides two 96-pin DIN bus connectors for user installation.

MVME932 VMEbus Extender Module, single-high, provides identification of each trace.

MVME933-1 VMEbus Wirewrap Module, single-high, with ground plane; provides one 96-pin DIN bus connector for user installation.

MVME935 I/O Channel to 50-pin header Adapter; brings I/O Channel to front of Eurocard Chassis.

MVME940-1 VMEbus and I/O Channel 19″ Chassis with MVME910-3 power supply; provides seven double-high VMEbus slots, two 5-slot I/O Channel backplanes with single-high hardware and cables.

MVME941 VMEbus and I/O Channel Card Cage for 19″ rack mount includes nine double-high VMEbus backplane slots and two 5-slot I/O Channel backplanes with single-high mounting hardware and cables for five I/O Channel Modules.

MVME942 VMEbus 20-Slot Double-High VMEbus Card Cage for 19″ rack mount.

MVME943-1 VMEbus I/O Channel Chassis with nine VMEbus slots, six I/O channel slots, sixteen 80 mm I/O Transition Modules (MVME700 series) in the back, accepts MVME820 or MVME821 Mass Storage Module, transverse mid chassis 400 watt power supply, 19″ rack mount chassis.

MVME944-1 VMEbus Module Chassis with 20 VMEbus slots and sixteen 80 mm I/O Transition Modules (MVME700 series) transverse mid-chassis 400 watt power supply, 19″ rack mount chassis.

VMEsystem 1000 Microcomputer System Family

The VMEsystem 1000 Family of rack-mounted OEM microcomputer systems is part of Motorola's new "Open System" product line. Open System products are engineered to provide a logical starting point from which to tailor high-performance, application-specific products using M68000-based VMEmodules. The VMEsystem 1000 Family is designed for a wide variety of uses in the fields of Industrial Automation, Communications/Networking, and Factory Control Systems. By choosing from a wide selection of VMEmodules, original equipment manufacturers can use the VMEsystem 1000 Family to customize their systems to meet a wide variety of system requirements.

VMEsystem 1000 products feature a VME chassis with card cage, a 400 watt power supply, a 40Mb or 70Mb Winchester, and a 1Mb floppy disk drive. Other features of this product line include:

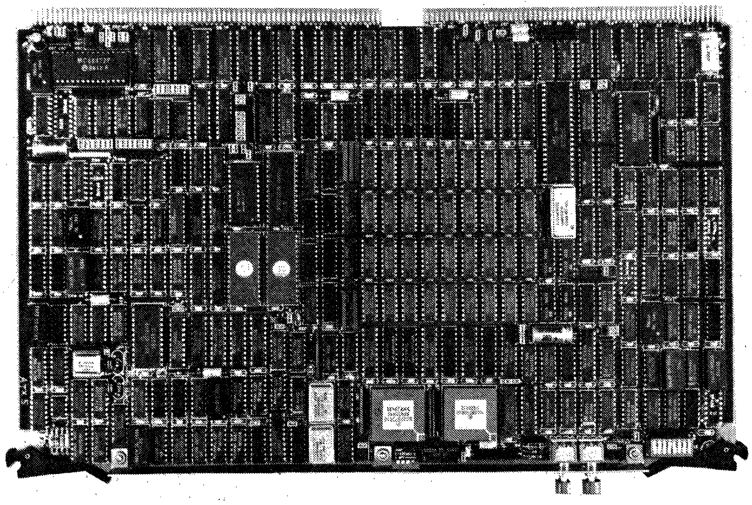
- Multi-user Capability
- VERSAdos and SYSTEM V/68 Support
- Capability to Incorporate Six Additional VMEmodules
- 24-bit VME Backplane with Sufficient Slots and Power to allow OEM Configurations for Graphics, Memory, and LAN/WAN
- Optional Terminal/Keyboard Available

SYS1121VY221 VMEsystem 1121 System featuring MVME121 10 MHz MC68010 Processor Module, MVME050 System Controller Module, MVME320-1 Winchester/Floppy Controller Module, MVME701A I/O Transition Module, MVME702A Disk Interface I/O Transition Module, MVME822 40Mb Winchester 655Kb Floppy Mass Storage Module, enclosed in a 400 watt chassis. An additional six slots for VMEbus modules, six I/O Channel slots, and 20 I/O Transition Modules. VERSAdos Operating System is included.

SYS1121UY221 VMEsystem 1121 System featuring MVME121 10 MHz MC68010 Processor Module, MVME050 System Controller Module, MVME202 512Kb DRAM Module, MVME320-1 Winchester/Floppy Controller Module, MVME701A I/O Transition Module, MVME702A Disk Interface I/O Transition Module, MVME822 40Mb Winchester 655Kb Floppy Mass Storage Module, enclosed in a 400 watt chassis. An additional five slots for VMEbus modules, six I/O Channel slots, and 20 I/O Transition Modules. UNIX SYSTEM V/68 Operating System is included.

SYS1131VY221 VMEsystem 1131 System featuring MVME131 12.5 MHz MC68020 Processor Module, MVME050 System Controller Module, MVME204-1 1024Kb DRAM Module, MVME320-1 Winchester/Floppy Controller Module, MVME701A I/O Transition Module, MVME702A Disk Interface I/O Transition Module, MVME707 I/O Transition Module, MVME822 40Mb Winchester 655Kb Floppy Mass Storage Module, enclosed in a 400 watt chassis. An additional five slots for VMEbus modules, six I/O Channel slots, and 20 I/O Transition Modules. VERSAdos Operating System is included.

SYS1131UY221 VMEsystem 1131 System featuring MVME131 12.5 MHz MC68020 Microcomputer Module, MVME050 System Controller Module, MVME204-1 1024Kb DRAM, MVME320-1 Winchester/Floppy Disk Controller Module, MVME701A I/O Transition Module, MVME702A Disk Interface I/O Transition Module, MVME707 I/O Transition Module, 70Mb Winchester 655Kb Floppy Disk Module, enclosed in a 400 watt chassis. An additional five slots for VMEbus Modules, six slots for I/O Channel Modules, and 15 slots for I/O transition Modules.



VERSAmodules

As MPUs begin to perform like mainframes, the system-level bus must change accordingly. To thoroughly exploit the capabilities of today's rapidly advancing technologies, a high-performance 16/32-bit bus architecture is needed with the proper hardware, architectural features, and adequate provisions for future growth. VERSAbus meets these evolving high-end requirements by providing designers with the architectural characteristics necessary to squeeze every "bit" of performance from the advanced M68000 Microprocessor Family.

VERSAmodules offer full 32-bit capability, I/O address enable, standard memory address control, expanded address enable, a secondary memory map and interrupt enable, RAM disable, ROM disable, and full TTL compatibility. System failure and diagnostic controls are extensive: multiple failure detection (AC FAILURE, DC FAILURE and BUS ERROR), cycle retry, self-test mode, system fail indication (after self-test), primary and secondary reset, system pause, and battery-backup voltage distribution.

With a mechanical form factor giving approximately 2½ times the area of the double-high VMEmodules, Motorola's VERSAmodule Family is particularly effective in complex systems demanding extraordinary memory and I/O capacity. VERSAmodules are available with the MC68000, MC68010, and the MC68020 MPU's. All these features plus a full complement of modular subsystems and extensive software support make the VERSAmodules prime candidates for systems with the most demanding requirements.

Monoboard Microcomputer Modules

VERSAmodule Monoboard Microcomputers are the most powerful 16/32-bit microcomputer modules available with features such as I/O-Channel interface, VERSAbus interconnect, bus arbitration logic, dual-port RAM, multiprotocol serial I/O, parallel I/O, programmable timer/counters and battery back-up capability for RAM.

VERSAmodule Monoboard Microcomputers offer a wide lattitude in on-board memory and I/O complements for a variety of applications.

M68KVM01A VERSAmodule M68000 16-Bit Monoboard Microcomputer with 32Kbytes of RAM, has 8 MHz system VERSAbus system interface with bus arbitration and interrupt handling with local private bus; includes eight sockets for up to 64Kbytes of user provided ROM or EPROM, three programmable counter/timers, two RS-232C ports for data rates to 19.2K baud or 1 mbps with external clock, both may be strapped for terminal or modem interface; one port is programmable for Sync/Async and strappable to RS-422 interface. Four 8-bit/2-handshake-bit I/O ports are also provided for use as two parallel printer ports or as 8-/16-bit buffered data and control interfaces.

M68KVM01A2 Same as M68KVM01A but with 64Kbytes of RAM.

M68KVM02-3 Similar to M68KVM01A but with 128Kbytes of dual port RAM control, two additional sockets for up to 64Kbytes of user supplied ROM/EPROM, and two multiprotocol RS-232C Serial I/O ports for both sync/async byte oriented or SDLC/HDLC bit-oriented protocols, and local off-board I/O expansion via I/O Channel interface.

MONOBOARD MICROCOMPUTER MODULES — continued

M68KVM03-1 VERSAmodule MC68010 16-Bit Monoboard Microcomputer with 256Kbytes of RAM, has 10 MHz system VERSAbus system interface with bus arbitration and interrupt handling with local private bus; includes MC68451 MMU, MC6840 Programmable timer module, MC146818 Real-Time Clock, two sockets for up to 64Kbytes of user provided ROM or EPROM, three programmable counter/timers, two RS-232C ports for data rates to 19.2K baud or 1 mbps with external clock, both may be strapped for terminal or modem interface; one port is programmable for Sync/Async and strappable to RS-422 interface. Four 8-bit/2-handshake-bit I/O ports are also provided for use as two parallel printer ports or as 8-/16-bit buffered data and control interfaces. Also includes I/O Channel interface for off-board I/O expansion (refer to pages 36–38 for I/O Channel compatible modules).

M68KVM03-3 Same as M68KVM03-1 except no MMU.

M68KVM04-1 The VERSAmodule 32-bit Monoboard Microcomputer Module is designed to function in those applications requiring maximum performance while maintaining the versatility inherent with VERSAmodule systems. Highest performance is attained when the VM04 is used in conjunction with one or more M68KVM13 (VM13) Dual-Ported RAM Cards operating as a main memory. The VM04 is the first VERSAmodule product to offer the following:

MC68020 Microprocessor with 32-bit address and data, provision for MC68881 Floating Point Coprocessor (customer-supplied option), Demand Paged Virtual Memory Management Module implemented with gate array technology (MMB), an onboard software transparent cache configured as 4K entries, with each entry supporting full 32-bit address/data, RAMbus interface provides high-speed data path to/from memory, VERSAbus interface allows user configuration of the microcomputer system to fit the application, VERSAbus interrupter, interrupt handler, and arbiter onboard programmable timer module, dual multiprotocol serial I/O ports (Data Rate up to 100K-bits/sec), two ROM sockets configured for Industry Standard 28-pin ROM/EPROM devices, accepts 020bug Debug Monitor Firmware (optionally available).

M68KVM04-2 Same as M68KVM04-1 except no MMB.

M68KVMMB851 Memory Management Module provides hardware support for 68010/68020 users needing to implement demand paged virtual memory systems and is compatible with MC68851.

Memory Modules

M68KVM10-3 VERSAmodule 128Kbyte Dynamic RAM Module including byte parity checking, 8-/16-bit addressing, separately addressable blocks of 32Kbytes, access time is less than 400 ns.

M68KVM11-1 VERSAmodule 256Kbytes Dynamic RAM Module with Error Detection and Correction (EDAC).

M68KVM11-2 Same as M68KVM11-1 with 512Kbytes of Dynamic RAM with EDAC.

M68KVM11-3 VERSAmodule 1Mb Dynamic RAM Module with EDAC.

M68KVM11-4 Same as M68KVM11-3 except 2Mb Dynamic RAM.

M68KVM12 VERSAmodule 1Mbyte Dynamic RAM Module with parity.

M68KVM12-2 Same as M68KVM12 except 4Mb Dynamic RAM.

M68KVM13-1 VERSAmodule high performance 32-bit 1Mb of Dynamic RAM with high-speed RAMbus and byte parity. The VM13 is used with the 32-bit Monoboard Microcomputer Module M68KVM04 (VM04).

M68KVM13-2 Same as M68KVM13-1 except 4Mb of Dynamic RAM.

Peripheral Interface and Communication Modules

M68KVM20 VERSAmodule Floppy Disk Controller module, enables control of one 512Kbyte EXORdisk II drive system (two drives) or two daisy-chained 1Mbyte EXORdisk III drive systems (four drives), the IPC device provides bus control. Includes daisy-chain cable M68KVMCFD1 connections from 50-pin VERSAbus backplane.

M68KVM21 VERSAmodule Universal Disk Controller provides control for up to two SMD interface compatible hard disk drives (Control Data, SMD, CMD, MMD, and LMD) and up to 4 floppy disk drives. Compatible floppy disk subsystems include one or two daisy-chained 1Mbyte EXORdisk III drive subsystems (four 8″ drives, 2Mbytes).

PERIPHERAL INTERFACE AND COMMUNICATION MODULES — continued

The following cables are available.

M68FDIC Floppy Disk Interconnect Adapter, Industry Standard

M68KVMCFD1 Floppy Disk (EXORdisk III) Cable Assembly for M68KVMCH1 Chassis rear panel connection to UDC Module via VERSAbus backplane.

M68KVMCHD1 Hard Disk (two SMD compatible) Cable Assembly for M68KVMCH1 Chassis rear panel connection to UDC Module via VERSAbus backplane.

M68KVMSMDC Hard Disk SMD Interface Daisy-Chain Cable, 15 ft.

M68KVMSMDE Hard Disk SMD Interface Expansion Cable, 6.8 ft.

M68KVMSMDR Hard Disk SMD Interface Radial Data Cable, 15 ft.

M68KVM22 VERSAmodule Intelligent Universal Disk Controller Module based on the 68000. The M68KVM22 (VM22) provides control of up to four SMD-compatible disk drives (256, 512, or 1024 bytes/sector), supports SA800-compatible 8″ floppy disk drives or SA400-compatible 5-1/4″ floppy disk drives in any combination of four. Additional features include 128, 256, 512, or 1024 bytes/sector Frequency Modulation (FM)/Modified Frequency Modulation (MFM) recording; 32-bit Error Correction Code (ECC) allows transparent correction of 11-bit burst errors on SMD disks, 16-bit cycle redundancy check (CRC) on floppy disks, multisector 4Kb First-In First-Out (FIFO) data buffer, SMD data rate is 12M-bits/sec (max), floppy data rate is 500K-bits/sec (max).

M68KVM23 VERSAmodule intelligent Peripheral Controller Module based on MC68010. M68KVM23 supports up to four ST506/ST412 compatible 5-1/4″ Winchester disks, supports four SA400 compatible 5-1/4″ floppy disks, supports one Q1C-02 compatible 1/4″ Streaming Tape Drive, supports one Centronics compatible printer, supports 24- or 32-bit DMA addressing, 32Kb dual ported SRAM for data buffering and local MPU, 32-bit Error Correction Code (ECC), 16-bit Cyclic Redundancy Check (CRC) or floppy and streaming tape, and 7-segment LED for diagnostic messages.

M68KVM30 VERSAmodule Multi-Channel Communications Module provides four async RS-232C Serial ports (programmable for modem/terminal at baud rates of 50 to 9600 bps) and one parallel printer (Centronics type) port, includes IPC device.

M68KVM30-1KT Full Duplex Firmware upgrade kit for M68KVM30 to M68KVM30-1.

M68KVM30-1 Same as M68KVM30 except full duplex firmware.

M68KVM232CP VERSAmodule Chassis Cable Assembly (used with M68KVMCH1) provides external connection for four RS-232C devices and a parallel printer.

M68KVMPRTCE Printer Cable, Centronics type, 10 ft.

M68RS232-10 RS-232C Cable, 10 ft.

M68RS232-25 RS-232C Cable, 25 ft.

M68RS232-50 RS-232C Cable, 50 ft.

M68KVM31 VERSAmodule High Performance Intelligent Multi-channel Communications Module based on the 68000 16-/32-bit Microprocessors. Features include two M68000's running at 10 MHz, eight RS-232C serial ports programmable connection for synchronous or asynchronous communications, modem/terminal at baud rates from 110 to 153Kbits/sec. Additional features include 128Kbytes DRAM, 32Kbytes EPROM, and 32Kbytes private SRAM. Software available includes a real-time executive and VERSAbus drivers.

M68KVM32 VERSAmodule Intelligent Asynchronous Communications Module based on MC68010. Eight asynchronous channels, full duplex, RS-232C level conversion, programmable data rate to 19.2K baud, supports 24- or 32-bit DMA addressing, Centronics compatible port, 128Kb Dynamic RAM with byte parity for buffer and Writeable Control Store (WCS), and 7-Segment LED for diagnostic messages.

M68KVM33 VERSAmodule Ethernet Node Processor/LAN Controller Communications Module provides high performance 10 Mbps Ethernet interface, incorporates MC68000 MPU, the MK68590 LANCE Ethernet Controller, and the AM7991 Serial I/O Adapter; and onboard EPROM containing power-up self-test routines plus kernel software giving data transfer rates up to 200 1Kbyte packets/second. Available with network software including XNS host resident utilities, drivers and XNS protocol software for UNIX SYSTEM V/68 and VERSAdos. Contact factory for details of ordering information for additional software.

M68KVM60 VERSAmodule Universal Intelligent Peripheral Controller, provides DMA data transfer capability, command channel software interface to onboard firmware monitor, and a relatively simple interface to external control logic.

M68KVM80-1 VERSAmodule Memory, I/O, and Time-of-Day Clock Module (without memory) provides eight 24-/28-pin sockets for up to 256Kbytes of user supplied ROM/EPROM, two multi-protocol (sync/async byte oriented or SDLC/HDLC bit oriented) RS-232C Serial I/O ports with baud rates selectable to 19.2Kbps, six 8-bit/2-hand-shake-bit I/O ports (60 lines), three 24-bit programmable counter/timers, and an interrupt requestor for I/O devices.

M68KVM80-4 VERSAmodule Memory, I/O, and Time-of-Day Clock Module same as M68KVM80-1 with 128Kbytes RAM.

VERSAmodule Packaging and Accessories

Four-Slot Chassis

M68KVMCH1-1 VERSAmodule System Chassis, 4-Slot, includes 15 A, 5 Vdc power supply with power fail recovery and ac line clock, includes 19″ rack mountable card cage and backplane, moveable bus terminators, dual cooling fans, backplane I/O connector kit with four standard VERSAbus 50-pin connectors, and removable front panel for front loading access. Chassis is stackable for expansion to three chassis (12 slots); access is provided for VERSAbus interconnect between chassis. Expansion kit M68KVMCHE is required for expanded configurations.

MVMCH1-2 Same as M68KVMCH1-1 except has 30 A, 5 Vdc power supply and includes 5-Slot I/O Module Card Cage.

M68KVMCC1 VERSAmodule 4-Slot Card Cage with backplane and bus terminator, includes card guides metal frame, and mating power connectors; stackable with up to three units. Expansion kit M68KVMCHE is required for expanded configuration.

- **M68KVMCHS** VERSAmodule 19″ Chassis Slide Mount Kit.
- **M68KVMCHD** VERSAmodule Chassis Decorative Cover Kit.
- **M68KVMCHDSS** VERSAmodule Chassis Decorative side Skins for stacked added 4-Slot Chassis.
- **M68KVMCCC** VERSAmodule Chassis Expansion Card Cage Mating Kit, consists of four 50-pin VERSAbus backplane mating connectors; may require up to four connectors per slot.
- **M68KVMCHE** VERSAmodule Chassis/Card Cage Expansion Kit, provides VERSAbus interconnect cable and all hardware to stack two M68KVMCH1-1/-2 chassis to create 8-Slot chassis; two kits are required to expand chassis to 12-slot configuration.
- **M68KVMCHU** VERSAmodule Chassis Unified Power Control Kit, provides ability to control power in two or three chassis systems from one key-lock switch.

M68KVMPM1 VERSAmodule Power Monitor Module, enables use of non-Motorola power supplies to provide ACFAIL, ACCLK, and SYSRESET signals; enables selection of 0.5, 1, or 1.5 cycles ac power drop-out and generates proper sequence of power up and power down.

M68KVMPS1A Power Supply, 228 Watt Switching Regulator provides +5 Vdc @ 30 Amps, +12 Vdc @ 2.5 Amps.

Eight-Slot Chassis

MVMCH3-1 VERSAmodule 8-Slot Chassis with 110 V, 400 watt switching power supply and power monitor module, rack mountable, four 50-pin connectors to interconnect to the VERSAbus I/O pins are also included. Includes User's Manual.

MVMCC3 VERSAmodule 8-Slot Open Frame Card Cage. Includes User's Manual.

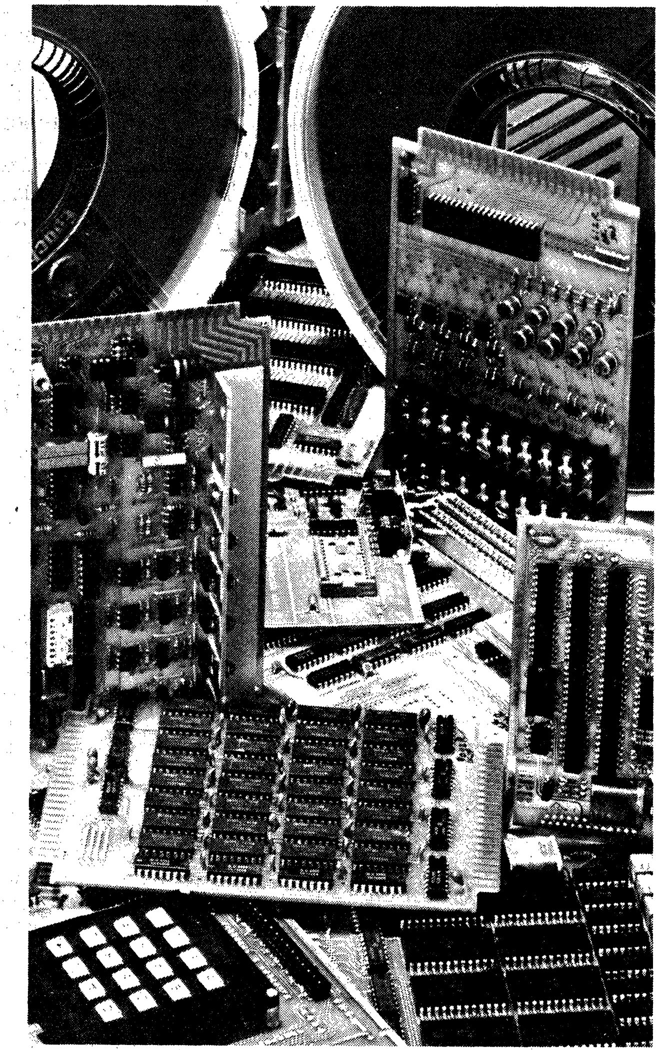
M68KVMCHS VERSAmodule Rackmount Slides and Mounting Hardware. Includes installation instructions.

MVMCH3CVRD VERSAmodule 8-Slot Chassis decorative cover when used as a table-top unit. Includes installation instructions.

MVMCH3CHE VERSAmodule Chassis Expansion Kit that provides interconnect cable to use between two card cages. Includes installation instructions.

M68KVMPM1 VERSAmodule Power Monitor Module, enables use of non-Motorola power supplies to provide ACFAIL, ACCLK, and SYSRESET signals; enables the selection of 0.5, 1, or 1.5 cycles ac power drop-out and generates proper sequence of power up and power down.

WINTEK



Wintek Corporation—your complete source of microcomputer hardware and software products for the 6800, 6801, 6805, and 6809 microprocessor families:

- *Micro Modules for R & D efforts and for the OEM*
- *Software Development Tools*
- *Computer-Aided-Design Software*

Items listed on this page are just a sample of Wintek's wide product line. Request a complete catalog of Wintek products and services.

WINTEK CORPORATION

LAFAYETTE, IN 47904-2993

Micro Modules

All modules are 4.5 by 6.5 inch. Unit prices are listed. Quantity discounts for micro modules are 10-24 10%, 25-49 20%, 50-99 30%, 100-499 40%, 500+ 50%. Manuals are available for $5 per module.

MCH18	6809 MPU, 2K RAM, 3 ROM sockets, 2 RS-232 serial ports, 4 parallel ports, watchdog timer, real-time clock	$285
MCH38	6809 MPU, 6K RAM, 1 ROM socket, 2 RS-232 serial ports, 4 parallel ports, watchdog timer real-time clock	$325
MCH68	6809 MPU, 24K RAM, 1 ROM socket, 2 RS-232 serial ports, 4 parallel ports, watchdog timer, real-time clock	$585
MCL10	6800 MPU, 128 bytes RAM, 1 ROM socket	$101
MCL45	6800 MPU, 0.5K RAM, 1 ROM socket, serial port, 4 parallel ports	$182
MAI04	16-channel, 12-bit A/D Converter module	$229
MAI20	2-channel, 8-bit D/A Converter module	$99
MCI11	16 button keypad with 15 7-segment displays	$199
MCS00	Cassette tape & RS-232 interface for 6800 Control Module	$109
MCT10	Counter/timer module with battery	$129
MDS08	Driver/Sensor module with 8 optically isolated inputs	$111
MDS44	Driver/Sensor module with 4 optically isolated inputs and 8 open-collector drivers	$107
MDS80	Driver/Sensor module with 16 open-collector drivers	$103
MFC04	Floppy disk controller for 4 drives	$199
MGP00	IEEE-488 Bus interface	$199
MPB00	Breadboard with parallel interface	$49
MPI08	64-line parallel I/O	$179
MRR19	Memory Expansion with sockets for 56K RAM/ROM	$139
MRR39	Memory Expansion with 30K bytes of RAM	$339
MRR49	Memory Expansion Module with memory mapping	$189
MSI08	8-port RS-232 serial interface	$249
ABP04	4 slot backplane	$50
ABP07	7 slot backplane	$86

Personal-Computer-Based Software

Develop 6800-family software on an IBM-PC or compatible. C Compilers are complete K&R implementations; Macro Assemblers are Motorola compatible. All prices listed below include a linker and terminal emulator. Complete manual set available separately for $50.

PCC00	6800 C Compiler and Macro Assembler	$895
PAS00	6800 Macro Assembler	$495
PAS01	6801 Macro Assembler	$495
PAS05	6805 Macro Assembler	$495
PCC09	6809 C Compiler and Macro Assembler	$895
PAS09	6809 Macro Assembler	$495

Cross-Software

Development tools written in ANSI FORTRAN for PDP-11, VAX, IBM, CDC, etc. computers. Request license and media forms before ordering. Complete manual set available separately for $25.

CAS00	6800/6801 Macro Cross-Assembler	$1000
CAS50	6805 Macro Cross-Assembler	$1000
CAS90	6809 Macro Cross-Assembler	$1000
CFP00	6800 Floating-Point Package	$500
CLL00	Cross-Linker	$400
CPL00	6800 PL/W Compiler	$1400
CPL90	6809 PL/W Compiler	$1400
CSM00	6800 Simulator	$800
CSM10	6801 Simulator	$800
CCC00	6800 Package—CAS00, CFP00, CLL00, CPL00 & CSM00	$3400

Computer-Aided-Design Software

smARTWORK lets you create and revise printed-circuit-board artwork on your IBM-PC. Sold with a 30-day money-back guarantee.

PSW00	smARTWORK for the IBM-PC	$895

TELEX: 70-9079 WINTEK CORP UD

TELEPHONE: (317) 742-8428 - (800) 742-6809

ALTERNATE SOURCE DIRECTORY

The Alternate Source Directory is an industry-wide cross reference of those devices which manufacturers claim are pin-for-pin and functional equivalents to IC's made by other firms. It is a compilation of many individual references and shows literally thousands of alternates that are not implied by their model numbers, especially in the linear and memory areas. Unlike the usual alternate source guides, this directory leads you to many alternate sources for any particular device, not just one. Containing over 65,000 cross references, it is the most comprehensive alternate source directory ever published.

HOW TO USE THE ALTERNATE SOURCE DIRECTORY

The second column of this Alternate Source Directory shows devices which are replacements for those in the first column. Devices listed in **BOLD FACE** type have technical data in the Master Selection Guide. This information begins on the page listed to the right of the **BOLD FACE** part numbers. Products preceded by a ◆ have been discontinued by the manufacturer. This section does include devices not listed in the Master Section Guide; e.g., discontinued items, DTL and 54L devices.

In order to maintain this list within some reasonable bounds, the A and B suffixes indicating improved versions generally have been dropped. If this were not done, for example, every higher speed selection conjured up by a memory manufacturer would result in a device that could replace many equal or slower competitors and this directory would become highly involved in slight performance variations. Moreover, improved performance is only important if your circuits take advantage of it.

One of the difficulties with any cross reference is that devices meant to be alternates do not necessarily perform the same in all circuits. Thus, it will be necessary for you to check specifications, or even check circuit performance before deciding which alternates are right for you. A major benefit of this list is that it gives you more alternatives to study. But if you do not find what you need here, it may be possible to find additional alternates by locating the device in the Master Selection Guide. Particularly for digital circuits, the other products grouped with it will normally offer similar or identical performance.

VERZEICHNIS VON AUSTAUSCHBAREN BAUELEMENTEN

Das Verzeichnis von austauschbaren Bauelementen ist eine umfassende vergleichende Äquivalenzliste für die gesamte Halbleiterindustrie. Darin sind solche Bauelemente enthalten die, nach Herstellerangaben, nach Funktionen und Pinbelegung mit Typen anderer Hersteller voll austauschbar sind. Es ist eine Zusammenfassung von vielen Einzelangaben und enthält Tausende von Äquivalenztypen, die nicht aus den Typennummern hervorgehen, besonders im Linear- und Speicherbereich. Im Gegensatz zu üblichen Äquivalenzlisten bietet dieses Verzeichnis nicht nur eine sondern veile Alternativlösungen für jedes einzelne Bauelment. Mit über 65,000 Querverweisen ist es die umfassendste Referenzliste, die je veröffentlicht wurde.

GEBRAUCHSANLEITUNG FÜR DIE ÄQUIVALENZLISTE

Die zweite Spalte dieses Verzeichnisses enthält Bauteile, welche für die in der ersten Spalte austauchbar sind. Für Bauteile in Fettdruck finden Sie technische Daten im Master Selection Guide. Diese Information beginnt auf der Seite, die rechts neben den fettgedruckten Typennummern erscheint. Produkte mit einem vorgestellten ♦ Zeichen werden nicht mehr hergestellt. Dieser Abschnitt enthält auch Bauelemente, die nicht im Master Selection Guide aufgelistet sind, z.B. nicht mehr produzierte Teile, DTL und 54L Bauelemente.

Diese Auflistung wurde aus Hersteller-Empfehlungen erstellt. Nachdem jede Firma dazu neigt, nur sich selbst als Alternative zu den bekannten Herstellern zu nennen und größere Firmen kleinere gerne ignorieren, hat nicht jedes Bauelement seine jeweilige Entsprechung Daher sollten Sie, wenn Sie nach Alternativen für ein Bauteil einer weniger bekannten Firma suchen, zunächst die entsprechenden Aquivalenztypen nachschlagen, insbesondere wenn sie von größberen Firmen sind, und damit evtl. weitere Alternativen ausfindig machen.

Um diese Liste nicht zu umfangreich werden zu lassen, wurden die A- und B-suffixe, die verbesserte Versionen bezeichnen, in der Regel Weggelassen. Wäre dies nicht geschehen, dann würde z.B. jede Selektion nach höherer Geschwindigkeit, die von einem Speicher-Hersteller durchgeführt wurde, ein Bauelement ergeben, das viele gleichschnelle oder langsamere Versionen von anderen Herstellern ersetzen könnte, und diese Vergleichsliste hätte eine Vielzahl von Bauelementen, die sich nur ganz geringfügig voneinander unterscheiden. Darüber hinaus sind bessere Parameter nur dann wichtig, wenn Sie diese in Ihrer Schaltung zu Ihrem Vorteil nutzen können.

Eine der Schwierigkeiten, die bei jeder Aquivalenzliste auftreten, ist die, daß austauschbare Bauelemente nicht unbedingt in allen Schaltungen dieselbe Funktion erfüllen. Daher sollten Sei, bevor Sei sich für einen Aquivalenztyp entscheiden, alle Datenblätter genau prüfen oder sogar feststellen, ob das betreffende Bauelement in Ihrer Schaltung richtig arbeitet.

Ein großer Vorteil dieser Liste ist, daß sie noch mehr Alternativlösungen zur Prüfung anbeitet. Aber wenn sie hier nicht das finden, was Sie suchen, können Sie möglicherweise weitere Aquivalenztypen feststellen, wenn Sie das Bauelement im Master Selection Guide nachschlagen. Insbesondere bei Digital-ICs bieten die anderen dort mitaufgeführten Produkte normalerweise ähnliche oder identische Funktionen.

LE REPERTOIRE DES SOURCES ALTERNATIVES

Ce répertoire est un outil de référence utilisé largement dans toute l'industrie. Il permet de trouver quels sont les appareils qui, d'après leurs fabricants, sont les équivalents des circuits intégrés vendus par d'autres firmes. Cet ouvrage compile un nombre considérable de références individuelles, et offre littéralement des milliers de possibilités alternatives qui ne sont pas évidentes de par les numéros de modéle des appareils, particulièrement dans le cas des mémoires et des systèmes linéaires. A la difference des autres guides du même domaine, ce répertoire n'offre pas qu'une seule et unique source alternative pour un appareil, mais au contraire plusieurs. Il contient plus de 65,000 références et représente le Répertoire des Sources Alternatives le plus complet jamais publié a ce jour.

COMMENT SE SERVIR DU REPERTOIRE DES SOURCES ALTERNATIVES

La deuxieme colonne de ce répertoire fournit une liste de produits capables de remplacer ceux énumérés dans la première colonne. Les produits écrits en gros caractères sont étudiés en detail dans le Guide Général de Sélection — se reporter à la page indiquée à la droite des numéros de pièces marqués en gras. Les produits précédés du signe (♦) ne sont plus en fabrication. Cette Section comprend des appareils qui n'apparaissent pas dans le Guide Général de Sèlection, tels que les appareils qui ont été discontinués, les DTL et les 54L.

Cette liste a été conçue en fonction des renseignements fournis par les fabricants. Il est cepedant relativement bien connu que chaque fabricant estime être le seul sur le marché à pouvoir produire des appareils équivalents à ceix des grands fournisseurs, et que, d'autre part, les gros fournisseurs ont tendance a ignorer les petits. Cet état d'esprit explique pourquoi il est impossible de fournir des équivalents de remplacement pour chacun des appareils énumérés.

Si vous recherchez des sources alternatives pour un appareil provenant d'une société qui n'ait pas une renommée mondiale, nous vous conseillons de prendre les produits de remplacement que vous pourrez trouver, notamment s'ils proviennent de fabricants bien connus, et d'ensuite consulter ce Répertoire pour trouver des sources alternatives possibles.

Afin de maintenir cette liste dans certaines limites, les suffixes A et B indiquant des versions plus puissantes ont généralement été ignorés. Cela pour éviter qu'un fabricant ayant conçu un système mémoire avec possibilitié de sélection à plus grande vitesse, se trouve en concurrence directe avec des sociétés équivalentes ou plus petites. Ce Répertoire deviendrait alors trop spécialisé dans des différences de performance minimes. D'autre part, une meilleure performance n'est importante que si vos circuits en profitent.

L'un des problèmes que l'on rencontre dans tout système de renvoi est que des appareils dits alternants ne vont pas obligatoirement avoir les mêmes performances sur tous les circuits. Il vous sera donc nécessaire avant de decider quels vont être les alternants que vous allez utiliser, de vérifier les spécifications ou même les performances du circuit. L'un des avantages de cette liste est qu'elle vous procure énormément d'appareils alternants. Au cas ou vous ne pourriez trouver dans cette Section ce dont vous avez besoin, nous vous conseillons de consulter le Guide Général de Sélection. Dans le cas des circuits digitaux, en particulier, les produits énumérés dans chaque groupe offrent généralement des performances similaires ou identiques.

DIRECTORIO DE FUENTES ALTERNAS

El Directorio de Fuentes Alternas es una referencia entre componentes usado ampliamente en la industria en la cual los fabricantes mantienen que provee estilo constructivo de terminales en los circuitos Integrados (IC) fabricados por otras compañías. Es una compilación de muchas referencias individuales y muestra literalmente miles de equivalentes alternas que no son obvias por su número de modelo, especialmente en las areas de lineal y memoria. En vez de las guías de fuentes, el alterno usual, este directorio los refiere a muchas fuentes alternas para cualquier componente, no solamente una. Con un contenido de 65,000 referencias de componente-a-componente es el directorio publicado más completo.

MODO DE EMPLEO DEL DIRECTORIO DE FUENTES ALTERNAS

La segunda columna de este Directorio de Fuentes Alternas muestra componentes que pueden reemplazar a los de la primera columna. Componentes que aparecen con letras oscuras tienen especificaciones técnicas en la Guía Maestra de Selección. Esta información empieza en las página que aparece a la derecha sel número de la parte en letras oscuras. Los productos acompañados por un (♦) han sido descontinuados por el fabricante. Esta sección si incluye componentes que no aparecen en la Guía Maestra de la sección; en otras palabras, artículos descontinuados, DTL y 54L.

Esta lista ha sido compilada por medio de recomendaciones de los fabricantes. Debido a que hay una tendencia a que cada compañía se muestre así misma como alterna a los fabricantes más prominentes, y que los fabricantes mayores ignoren a los mas pequeños, no cada componente hace referencia de uno a otro; de tal manera que, si usted busca alternos para una compañía menos conocida, obtenga los substitutos que encuentre, más que nada si son producto de compañías prominentes, y luego refiérase a ellos para encontrar otras fuentes.

Con objeto de mantener esta lista bajo un control razonable, los sufijos A y B que denotan mejoras, no aparecen. Si esto no se hubiese hecho, por ejemplo, cada selección de memorias de alta velocidad resultaría en una componente que podría substituir otras de igual velocidad o más lentas y este directorio terminaría dando mucha importncia a cambios insignificantes en el funcionamiento de ellos. Además, una mejora en las características solo es importante si sus circuitos lo requieren.

Una de las dificultades con cualquier referencia es que componentes que tienen como propósito ser equavalentes no necesariamente tienen el mismo rendimiento en todos los circuitos. Debido a esto, será necesario que usted determine las especificaciones, o inclusive determine las características del circuito antes de decidir que equivalente es mejor para usted. Un beneficio de esta lista es que le provee alternativas que investigar. Pero si no encuentra lo que necesita aquí, es aún posible encontrar equivalentes encontrando la componente en las Guía Maestra de Selección. En particular para circuitos digitales, los otros productos agrupados con aquel, le ofrecerá un funcionamiento igual o parecido.

代替ソース ダイレクトリー

このダイレクトリーはメーカーが他とピンコンパチブルか機能的に互換性があるという製品の全業界のクロスリファレンスです。これは個々のリファレンスを多数を編集したものであり，文字通り数千の型名からは全く分らない特にリニアとかメモリといった分野で数千の代替品を記載しています。

通常の代替品がガイドと異り，このダイレクトリーは特定品種について一社丈でなく数社の代替品を記載しています。65,000のクロスリファレンスがありこれ程広くカバーしたクロスリファレンスは本書が初めてです。

使用法

第二欄は第一欄の代替品を示しています。太字で印刷されている製品はマスターセレクションガイドにデータがのっている事を示します。そのページは太字印刷の型名の右側に書いてあります。◆印が前についている製品はメーカーが生産中止した事を示します。このセクションにはマスターセレクションガイドにのっていない，生産中止した製品例えばＤＴＬとか５４製品とかも記載しています。このリストはメーカーの推せんに従って作られたものです。各メーカーにある傾向ですが自社丈が本当の代替ソースと主張したり大手は中小メーカーを無視したりするので全ての製品が互い互いに全製品にクロスリファレンスされてはいない。ですからもし利用者皆様が小さなメーカーの代替品を探す時は皆様が先ず代替品を見つけ，大手メーカーがそれを作っていればそこを調べて代替メーカを探し当てる方法をとった方が良いでしょう。

このリストをある納得されうる限界にしておく為に改良品につけられるＡとかＢとか云ったサフィックスは通常つけてありません。もしつけてあるとメモリーメーカーが主張する高速セレクションが同等かスピードの遅い製品メーカーの製品を数多く取換えてしまう結果にもなるでしょうし，このダイレクトリーが少々の性能の違いに相当の比重をかけなくてはならないようになってしまいます。更に云えば改良性能はそれを充分に利用する回路丈にしか必要ないのです。

クロスリファレンスを作る難しさの一つは代替とされる製品が応々にして全ての回路で同性能でないと云うことです。この為利用者皆様は性能表を調査するか決定する前にどの代替が回路に合うかを回路で調査されることをおすすめします。このリストの良いところは皆様に多くの代替ソースがあることを知って頂く事です。もし皆様がこのセクションで見つけられなかった場合は，マスターセレクションガイドからも見つけることが出来ます。特にディジタル回路はグループ毎の他社製品は通常似かよったあるいは同一の性能を持っています。

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

			(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

Hitachi America, Ltd. (Cont'd)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements. Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

National Semiconductor (Cont'd)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

National Semiconductor (Cont'd)

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

			(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

Panasonic (Cont'd)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

(Continued)

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

◆ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.
